Are you sure, Dave? Heck, I haven't done this in so many years, I
probably could be wrong on that. Actually, I have not played around
with RDF equipment since about 1977 when I was hunting down a "person"

who was continiously playing music on the local CB channel.

Lately, I just drive around, watching the radio's meter, to find
people on the CB band. I've got to get back into RDF though (on the VHF
marine channels), so I guess I better study up. I'm going to build the
antenna, but I seriously doubt it will be a loop.

>Typical response from an anti-CB hambo who, like many, is angry and bitter
because the radio waves don't belong exclusively to him and others like him.<

     Considering some of Dwight's other posts on Ham-related NG's, I hardly
think he is some "angry and bitter Hambo".

     He is relating simple facts.  The FCC is not about to lift what little
last vestige of "regulations" it has on 11 meters.  It was meant to be a
short-range, low-power personal and business communications service, not a
license-free ham radio alternative.
```

And he was being conservative in the "4" number of persons petitioning the FCC to make hobby-type changes to Part 95. In the 34 years that I have been affiliated with the CB service in one degree or another, I would dare sare there have been several DOZEN petitions, some dating back to as late as 1969 that I recall, calling for liberalization of CB rules to make it more "ham-like".

The last significant petition I recall would have made an SSB-only service in the "freeband".

There is nothing bitter about it. It's simply fact that the FCC is not about to relent on 30+ years of virulent "no-hobby service" on 11 meters.

>I know that Wireless Marketing offers two other antennas for the AH27F (and its SSB cousin the AH-100)...anybody tried either of those, or perhaps something from another manufacturer?<

Although not "portable" in the sense that you can walk around with it, one favorite portable antenna of mine is the "coaxial dipole".

Take a piece of coax (preferably RG8X, but RG58 will work too) that is about 200 inches long. Split the jacket so as to expose 108" of the shield and inner conductor.

At the end of the cable where the jacket is still intact, seperate the braid enough so as to be able to pull the inner conductor thru it and thereby make two "legs" of the dipole. Put an appropriate connector on the jacketed end. Probably best (but make your own choice) to put a PL-259 on it, then use adaptors to mate other connectors.

Then you can put a loop on either end of the "legs" and tie them up to opposite supports, or hang it from a tree so as to be vertical.

If anyone wants a diagram of how to do this, send an SASE to my ham callsign address and I will be glad to return one to you free of charge.

Yep. I still have a loop, although I don't use it much these days (most
of the idiots are mobile). The pointer is usually perpendicular to the
loop, and it corresponds to the sharp null in signal.

On VHF bands, the doppler unit is commercially available, and will do a much better job than a simple bi-directional loop.

All this makes for facinating reading, but it still doesn't explain how it's supposed to "attenuate" signals on one side of an antenna.

If I place a non-conductor in direct contact with an active antenna element, it does not react to the signal. If I place a conductive substance in direct contact with an active element, the conductive substance just becomes additional radiation area. It might affect your impedence match, but it certainly will not add directional properties. Otherwise, if it were that simple, there would be commercial "teflon beams" available. Last time I checked, I didn't see any.

I just love CB "science".

I think we all understand what the teflon is "supposed" to do, but what
is lacking is the explaination on just HOW this is accomplished. A
substance is either a conductor, or an insulator. Placing either in
direct contact with an antenna, will not appreciably affect it's
radiation characteristics. Parasidic elements (Conductors) need to be
placed at precise wavelengths away to be effective as reflectors or
directors.

Just like running co-phased antennas. If you place the antennas a 1/2
wavelength apart, they produce a pattern that is directional. As the

antennas become closer together the directional characteristics diminish until they occupy the same space, and the pattern would be the same as a single antenna.

What the hell is "RF splatter", as applied to antennas? I've never heard of such a thing, or any mention of teflon being used by Larson or Diamond (and I own examples of both).

Spraying a computer (or any other) PC board with a conductive coating will short the components out, and render the board useless. Most conformal coatings are designed to seal out moisture, and are usually acrylic based.

There is a conductive spray that they spray of the insides of plastic covers, to help shield against excessive RF radiation (It's usually cheaper to spray a plastic cover than to use a metal one). But this conductive spray is not composed of teflon. This I know well, as my company uses this method for all of its international products (which have to meet tougher radiation standards than the FCC)

Teflon's main uses are related to its non-stick properties, and as an insulator. Teflon is used as an insulator (I have coax connectors that have teflon as the insulator), so how can a substance that is an insulator also be a conductor? If it is an insulator, it cannot function as a shield, as any shielding must be conductive.

You keep spouting all this double talk, and then make ad hominem comments toward anyone asking for you to substantiate your claims.

> And he was being conservative in the "4" number of persons petitioning the FCC to make hobby-type changes to Part 95. In the 34 years that I have been affiliated with the CB service in one degree or another, I would dare sare there have been several DOZEN petitions, some dating back to as late as 1969 that I recall, calling for liberalization of CB rules to make it more "ham-like".
>
> The last significant petition I recall would have made an SSB-only service in the "freeband".
>
> There is nothing bitter about it. It's simply fact that the FCC is not about to relent on 30+ years of virulent "no-hobby service" on 11 meters.
>

The BIGGEST reason that the FCC will never lift the 150 mile limit is that the HF bands all fall under ITU regulations. The ITU is an international organization. One of the ITU rules stipulate that all operators on bands that have the capability to propagate internationally, and support radio services that include international contacts, be able to send and receive morse code. the reason that the CB band is exempt from this requirement is because it is designated as a low power, non international service.

This code requirement may be reversed in a future WARC or other rulemaking, but for now it stands.

Lets Try this Big Bird Style for our favorite No Coder thats never heard of DXCC. For all pratical radio sense 1 DXCC = ! Country. this rule was not made by me but by your fellow hams in the dx century club and the arrl(although they are real hams that know and use code). there the ones that control what enteties are considered dxcc countries. you should be getting those photocopies today or tommorow so just wait and see. you seem like your getting kinda angry over all this, thats evident by you using personal attacks now instead of debating the subject.

  >

      Oh, I'm sorry, as you say, "your reading
& comprehension skill must be deficient"
   Go ahead and read what you said, slowly,
maybe out loud. Then it might be understandable
to you.

           The Landshark

I gotta agree with the sandbagger here.....and that conductive sprey is
mostly grafite...

If you would have taken the time to read my post, you would have seen that I
did tell you what I used to measure the difference.  As for 1.8 Ghz, if you
stop and think you might be able to figure out what I do for a living.  Why
else would I have a shop full of expensive HP equipment?  My equipment is quite
capable of the measurements needed to invalidate any of your posts to the
contrary.  I'm still waiting for one shread of proof from you how spraying
teflon on an antenna makes it directional.

No it won't, its an insulator, it will not anttenuate the signal. Even if it were a conductor, its in contact with the antenna and would not anttenuate the signal. Try it, take a reading on your antenna, place a strip of electrical tape down one side over the Entire length. Did the antenna become directional? NO, now tape a length of tin foil down one side of the antenna. Did it make it directional? NO again.
Spraying your antenna will not make it directional

What does increasing an antennas mass have to do with making it directional? I'm not sure what physical science you are using to come up with that answer. Maybe you would like to explain to the group how if they increase the mass of their antennas that they will become more directional. Why don't you take a few minutes and call Larsen and ask them yourself. You made claims about their antennas that you cannot substantiate, it pretty foolish on your part to post something that can be proven incorrect by a simple phone call.

I have a 200 watt am to 300 ssb solid state A.C. linear for sale.
Its a two final amp with hi/lo, am/ssb, and rec amp switches on it.
Pre amp does not work, 50 cent part to replace. has new finals. Asking $150.00

I used this amp for a driver for many years and never had a problem with it till recently I blew the finals and replaced them. I modified it to except the flange mount transistors. It used to use stud mount type.

You can buy a fan with a thermal couple already built in it, or buy a thermal control switch that can be mounted on the heat sink that will close a set of contacts and allow power to pass to any fan of your choice to turn it on. What needs to be considered is what temp would you like your fan to come on at? Then drill a hole or machine out a hole in the heat sink for the thermal couple to seat in, use thermal grease between the two parts so that it will allow the heat to transfer between the two. On the flange of the thermal switch do the same thing, use the thermal grease between the heat sink and switch before mounting it to the aluminum.

Comair Rotron makes a fan with a thermal couple already built in and I think Galco Industrial Electronics sells thermal switches. I believe thermal switch is are a cheaper way to go. I hope this helps.

in the short answer, PROBABLY NOT.
most any walkie talkies made in the last 10 years have what's called "the impossible pll chips".
they won't let you change crystals or jump pins to get more channels.
the old ham international w / t's had a pll02a chip which was easy.
most of the newer ones have either a tc-9106 or a c-5181 which can't be modded.
about all you can do is either experiment with small pull caps like 5 to 33 pF across the 10.240 crystal or get a 10.245 crystal out of an old scanner to jump the channels up by 5 kc. 26.970, 26.980, etc.
if you try to pull it any more than that, your channel frequencys will not be consistant across the band.
in other words, all of the channels won't end on .005 or .000.
good luck.
jeff

If you want something to spray and be conductive to shield, go to a good TV parts house and ask for the spray for TV tubes. I believe it's called Aquadag, Aquadak, or something like that.

But if you mean to try to solve an RF problem in a mic.... I don't think it will help.

I tried the spray, as well as a lot of other techniques, years ago to quiet down TRS-80 computers. I got my old Model III almost silent on VHF and above. But not by spray. I ended up 'screening' the main cage area, and wrapping the disk drive tower with grounded foil. I also wrapped the keyboard cable and grounded it, and put a grounded shield over the whole bottom of the case. (I did make sure the air slots were open!) I could never get it quiet on HF though. On the other hand, my old Model II was surprisingly quiet on HF, but tore up VHF like crazy.

Spraying the case never worked a bit on either of those computers.

>
> Training, brainwashing, whatever you call it. They always ask that. It's like going into McDonalds and asking for fries. "Do-you-want-fries-with-that?". "No thanks, just the fries".

At least they are getting a little smarter about it (corporate-wise) -- they now have "suggestive-sales" prompts on the point-of-sale computers that list items to suggest to the customer as each item is scanned or entered. If you buy a piece of equipment, usually it prompts for extended warranty, for example, as well as batteries if the item uses them. They're getting better at that. Granted, it lowers the IQ required to be a Radio Shack salesperson, so that anyone with a third-grade education can probably qualify. (OK, so say it -- that was the requirement before!)

> of such a thing, or any mention of teflon being used by Larson or
> Diamond (and I own examples of both).

RF Splatter is stray RF that falls outside the intended transmission lobe of an antenna. I would suggest you refer to a Radio Engineers Sourcebook (Watkins: Haydon Books, 1974) for a precise definition.

> Spraying a computer (or any other) PC board with a conductive coating
> will short the components out, and render the board useless. Most

> acrylic based.

Sorry Dave wrong answer. Conductivity and Insulativity are based on density (molecule compaction) and frequency at a specific temperature. What may be an insulator at one frequency may be a conductor at another. This is Physics 101. The plain fact of the matter is that I personally know a computer component manufacturer that coats their components prior to packaging becuase the TEFLON serves multiple purposes. Now you may argue this fact with me, however it still doesnt change that they are in fact performing this process. If you really want to get technical about this please email me and Ill be happy to send you either a web site or literature demonstrating this materials quantum structure.

> You keep spouting all this double talk, and then make ad hominem
> comments toward anyone asking for you to substantiate your claims.

Double talk eh?.....What double talk? Im not submtting this method for a patent (and Im not the one who originally dreamed up this brain-child) Ive stated my position quite eloquently and I dont have to justify my original post to any of these engineer wanna-be's. If the people who read my posts cannot comprehend them, I havent any control over that. What you find on this NG are people who base their biases on personalities and not facts which is similar to CB radio. One can grow ten feet tall behind a microphone if one so chooses.

The bottom line is your comments, like others posted here are based on a best guess with absolutely no factual or scientific data that would prove my posting is incorrect. I would suggest that if you are going to talk like a scientist, at least go out and act like one, and actually PROVE what I stated as being wrong. My original claim remains the same. Spraying a generous Teflon coating to 1/2 of a directional loop will result in an approx 3 db difference in the received signal (all things considered equal). If you and Mr. Hightower have some factual data, other than person opinion, to prove otherwise, please post it....................Theres nothing ad hom about it.

Well Frank, why on earth, when we are talking about HF frequencies would you attempt to disprove my comments using a frequency 1.8GHZ?.............If you have such nice equipment, as you say, why dont you perform the experiment on an HF (11 meter) frequency and post the dbI and dbZ results at one wavelength.

And, I really dont care what you do for a living. You've already proven your ability to blantantly lie about your "radio status" on this NG.

It needed to be posted as we were known for offering both products lines. We offer the custom high power units for the serious DX'ers. We no longer will offer the Davemade products and the X Force makers had nothing to do with this decision we had to make.

It makes the antenna modeling easier, and thats the main frequencies that I use my equipment for. Who is Frank, and what is my radio status that I have lied about to the newsgroup?
Does your magical spray only work on HF frequencies? Maybe that is why I didn't see any change.

I have a near new maxon 40 channel hand held c.b. radio 4 sale. Has hi/lo, squelch, rem ptt, ear mic and volume control. excepts rechargable batteries and has power jack for 12Volts. removable rubber antenna that you can connect different types of antenna too. This is a newer type l.e.d. display type handheld. how about $30.00?

> All this makes for facinating reading, but it still doesn't explain how
> it's supposed to "attenuate" signals on one side of an antenna.

Yes it does however the reason I posted it was to give some individuals an understanding that this material is not just "duct tape" as some contrarians in this thread believe that it is.

> If I place a non-conductor in direct contact with an active antenna
> element, it does not react to the signal.

Thats absolutely correct.

>If I place a conductive
> substance in direct contact with an active element, the conductive
> substance just becomes additional radiation area. It might affect your
> impedence match,

Right again but you forgot about bandwidth.
.
> Otherwise, if it were that simple, there would be commercial "teflon
> beams" available

No there wouldnt, and the reason for this is because you are attempting to compare the reactance of a 1/8 wavelength homemade antenna that has perhaps a 10mil coating ("at best", which is easily damaged) and impracticle to maintain, with full scale CB/Amateur/Commercial antenna manufacturing. We both know there are much simpler ways to manufacture antennas to achieve 3db attenuation, both mechanically and electrically (and at the same time, have the antenna last a long time). What we are talking about here is slight attenuation for the purposes of discounting a particular direction when using a loop constructed in this fashion, WHICH DOES WORK.............

>I just love CB "science".

So do I, especially when ego's are left out of the equation.

Do they spray the compenents to eliminate RF splatter as you put it. Teflon has many uses, eliminating RF splatter is not one of them. Again you are not sticking to the original issue. Spraying your antenna will not make it directional. Are you ever going to stick to the subject and answer it?

Cleaned out my garage yesterday. I have a box of dead radios and mics.

Includes 7 radios, 2 chassis's, 3 D-104's, and lots of miscellaneous
junque.

It's about 30 pounds from zone 212.

Ok, Wildcat which is it? You made a post that stated that Diamond and Larsen go to the added expense of spraying their elements with teflon to eliminate RF splatter. (which is BS) but they won't go to the added expense to "improve" their F/B ratio? If its so impratical to use with full size CB/Amateur?Commercial antennas, (as you put it) what was post about about stating that they did use it for RF splatter suppression. Are you losing track of what you have posted?

On Thu, 4 Nov 1999 12:53:32 -0500, "Wildcat" <wildcat@tp.net> wrote:

>No there wouldnt, and the reason for this is because you are attempting to compare the reactance of a 1/8 wavelength homemade antenna that has perhaps a 10mil coating ("at best", which is easily damaged) and impracticle to maintain, with full scale CB/Amateur/Commercial antenna manufacturing. We both know there are much simpler ways to manufacture antennas to achieve 3db attenuation, both mechanically and electrically (and at the same time, have the antenna last a long time). What we are talking about here is slight attenuation for the purposes of discounting a particular direction when using a loop constructed in this fashion, WHICH DOES WORK..............

>> If I place a non-conductor in direct contact with an active antenna element, it does not react to the signal.

>Thats absolutely correct.

Here you agree with Dave, that there is no interaction. But still try and tell everyone it works. Which one is it?

I have heard of a new enforcement effort for the Gov't frequencies below channel 1.

If you are caught transmitting there, you will be fined, radio confiscated and you will need $75,000 to bail you out of jail. There will be no giving up the radio to escape this fine.

I believe this source. He runs a radio shop and had a visit from Uncle Charlie last week.

Steve, You have pushed the X-force products on people far more so than the dave line, We have had people call you just to find out where you are coming from in regards to this, just look at your web page and see who you are and have been promoting. You have stated you are no longer selling them I think the desicion has been mutual, they have there own web page so its sort of counter productive and it seems you may have been playing one against the other. Anyhow best of luck to you, no hard feelings I am sure, but the few amps you have sold from them will not be missed.Also all you had to do was remove there products from your site, do you tell everyone on the NG everything you do?

He's not as wrong as you think, although its apparent that Wildcat didn't clearly explain his theory. In reality when an additional base metal (the aluminum present in the Teflon) is added to a portion of an antenna, the antennas resonant properties change proportionate to the added material. What is happening in this scenario is that Wildcat is attempting to make one side of the antenna resonate differently than the other side, hence an attempt to create different reactance levels within the same body. Although the total antenna mass is one, there will be a difference in resonance between the halves of the antenna (electrically, if measured at the antenna), which will result in one imbalanced electric signal being generated to the receiver. This imbalance may very well produce different reception signal levels in different directions however they will be very small.

So why would I want to spray one side with teflon, why not just cut the tip of the antenna at an angle? It would accomplish the same thing. And it would not make it directional. You could easily test your theory. Take a 1/4 antenna made of 1 inch stock, attach the center conductor to the very center of the 1 inch stock. Take measuremnets, move the center conduntor to an outside edge. Take your measurements again. Care to bet if you made your antenna directional by moving the center conductor of your coax? The answer is NO, even though you have essentially added a 1/2 inch of mass to one side of the antenna. A lot more mass than Wildcat has added in his theory. Adding mass to an antenna does not make it directional, it would make it more broadbanded. If it were so simple to make an antenna directional, every antenna company in the world would be doing it, and this wouldn't be the first time we had heard of it.

You hunt the null not only because it is sharper but also the
attenuation is needed when you get close.Use a sense antenna to make it
unidirectional,don't forget to spray the sense antenna with teflon. :)

I have found the BNC arangement to weak to support a bigger antenna for
very much use,that is the main reason I find CB band handi's worthless.

Cheers for that I was just asking coz I have a realy small garden and if it
was to come down it would probebly cause more damage to neghbours gardens
than my own

No, I'm NOT wrong. I've used DF loops for many years, and have found
dozens of people. The "flat side" of the loop is the null.

old icm sure appreciates you letting me know that the revolutionary war was over long before rf devices were invented. also how do you think i am getting in phil's face over this cb amp nonsense . i think phil took it basically, more or less, as another meager attempt at humor and therefore why can't you ? let me tell you something bob, you need to lighten up. if i didn't know better, you sir, are the one promulgating the reputation of somebody and it damn sure ain't cb types. this type of email activity smacks of tight assed ham bull shit of which , if i may be so bold to say, i am sick and tired of . anyway icm is out and reading the mail...............

either you've gone to all those places and interviewed all these people that he
"lied" about or you are psychic.
this proves what i've been saying all along about the rf police type hams.
you think you have a corner on the dx market and if you haven't done it, no one
can.
in the words of a late 60's steppenwolf song called tighten up your wig:
your mind is so narrow that it's no suprise, if you fell on a pin, you'd be
blind in both eyes.
i think someone needs to tighten up your wig.
jeff

While cleaning out the garage, I found a big boy that needed to
be tested before I sold it. Dragged out a spare battery, got some
2 gauge wire, and put a 1/4 wave whip on so I wouldn't burn up my
Firestik.

Anyway, I put on channel 6 and gave a call for Toll Free. Somebody
answered me! Was that you?

P.S. Don't anybody ask about the amp...it's already gone-sold!

does the old term "cb handle" mean anything to you?
why arn't hams required to use their names and addresses every 10 minutes
instead of call signs?
after all, it would be easier for field engineers to locate a ham should the
need arise. if i got my license today, it wouldn't appear in the call book
until next year.
if i were to cause a rule infraction that needed his attention soon, he would
have to contact the fcc which would take more time.
if everyone were to use their names and addresses every 10 minutes, he would
have the information he needed right away and there would be no chance of a
mistake with a missed, garbled or mis-understood letter or number in a call
sign.
sound like too much trouble?
same here. your point is moot.
strange.
jeff

A 3db change in signal strength is not usually considered large
enough to term the antenna "directional". I will try to substantiate
that with a quote from a well known source.

A 3db difference for a DF antenna is practically worthless,
especially from a non null radiation pattern.

same here. your point is moot. strange.
jeff>>

The existence of a daily updated FCC internet database pretty much allows any existing, newly licensed or newly upgraded ham be to positively ID'd within minutes by anyone, FCC field engineers included.

In my experience on HF, hams by and large seem to LOVE using their call letters. In fact, I hear many hams overcompensate by ID'ing every two minutes or so. Not to say they are somehow "better than CBers" because of this odd habit. It's just a thing I've noticed. I've found that hams have no problem with telling you their names and true locations (and sometimes their phone numbers). After all, it's all a matter of public record anyway.

Yes, of course there are the troublemakers that hang around a couple of infamous nets. You'd be right in saying that they certainly don't ID and prefer to stay anonymous. But they are a tiny minority, so tiny in fact that you could operate your whole ham career and never cross paths with any of these guys.

CB handles? I have no problem with that. And my point was that I notice that a lot of CBers would rather DIE than give away their true identity while on the air.

I guess it's just a whole different mindset.

it would seem that icom, kenwood and yaseu should watch out. they'll be next.
good bye legal mars and cap operations.
if i were to own a truck stop and had such a citation issued, i would surely
```

take it to court. these were not "illegal cb radios".
if my uncle, (general class), were still alive and wanted a galaxy 10 meter radio for his birthday, could i not buy him one?
if it is true, as many have said, that ham radios do not need a cb type acceptance, why can't the galaxy's be sold in their 10 meter form?
this proves what i've said a month ago. the fcc, as a "rule" making body, has entirely too much leway in changing the rules in the middle of the game.
we all know what people do with these radios but what if galaxy were to go to court and say that they were trying to cater to the legal mars / cap market with the design of their radios?
to be fair, the courts would have to either allow the galaxy's etc. to sell or it would have to force the kenwoods, icom's etc to modify their radios to keep them within their advertised bands.
what's good for the goose is good for the gander.
jeff

i read the power mods for my 2510 several years ago with interest.
when i bought my uniden PRO-810e and the expo 100 for it and installed it, i noticed the driver and final sections of both radios looked strangely identical. and, unless i miss my guess, the PRO-640e mobile and the uniden built rad shack model TRC-473 ssb radios are also the same as there are few differences between their boards and circuitry.
does this mean that the fcc will be cracking down on them next?
it worries me when a government entity can change the rules in the middle of the game without the usual oversight afforded by the constatution of the United States.
just something to think about.
jeff

they would have to get into the mind of the mfgr. to see if this was his intent.
if they can't, they have no proof that he intended to circumvent the law.
case closed.

```

The usual 40 mile commute on Rt.80 tonight, wife has the mike and she is working a convoy talking to the "boys". One driver announces that he's got his black lab in the cab. He's only .7 ahead so she askes is she can see this dog. My wife is a MAJOR animal lover, especially labs. So we're in the hammer lane and see him up ahead, as we pull up along side (I'm obviously watching his bumper and the road) the lab is on the drivers lap hanging out the window with those ears flapping in the wind. I could only hold formation for 15 seconds and pulled away. I then got a complete description about this dog for a few miles. We yakked with the driver for another 5 miles until we pulled off.

I would extoll about CB on the web and the really great nature we've found 85% of the drivers display, but I would rather not have it be the popular hobby it was back in the 70's. CB is really back in the drivers domain, with a few 4 wheelers involved.

Greg

Love my TX 800. Hit it with just enough power to key it (about 2 or 3 w), run it on the low side, will dead key about 40 w and swing to 400 using a single battery and stock alternator.

Don't forget that for the output to be clean, the INPUT has to be clean...

GIGO...

If you can find out any thing, to mod a htx-10   Please let me know.
I bought one and would like to mod it myself.

Bills 2 Way told me to remove D2 on the front panel and short out CON401.
But on the HTX-10 there is no D2 or CON 401. There are four blank solder pads between the bottom row of push buttons, maybe this is where the D2 is.

The HTX-10 and the SS-4900+, and the Magnum 257 all look the same, but maybe their not.

If you find out anything let me know, and I'll do the same for you.

Also Bill told me
1. Remove Power.
2. On the front panel remove D2.
3. Then short out CON401 after D2 is removed.
4. Now apply power.

Operation type HAM/ Extended CB is selected by pressing the "FUNC" button then Pressing and holding the "2(CALL) button for 3 seconds.

Use the same sequence to switch back to HAM mode.
Switch between FREQ and Channel modes by pressing the "FUNC" button then pressing, but not holding, the "2(CALL)" button.

Switch bands by pressing the "2(CALL) button only

Tom

  I'm not familiar with the Euro3900, wondering how many bands, channels are
available with mods.  Any comments about this radio from owners of same
would be greatly appreciated.  Thanks.

What does an amp do? Does it just help your signal get out farther?.Does
it help you to hear people from farther away too?
Thanks alot,

> A 3db difference for a DF antenna is practically worthless,
> especially from a non null radiation pattern.

And where may I ask did this conclusion come from? The last time I checked
my math, 3db was essentially the resultant square of any
output...............which is hardly "worthless".

>So why would I want to spray one side with teflon, why not just cut the tip
```

of
>the antenna at an angle? It would accomplish the same thing.

In a way you are correct, but your theory is physically wrong. Any matter
can be made to resonate differently, in different parts even though the
subject matter is one piece. A simple example would be the welding together
of two dissimilar metals. When combined these two materials will resonate at
a common frequency however each of the two dissimilar materials are still
resonating at the harmonic of eachs mass. In essence, both of these resonant
materials are fighting each other in an attempt to cancel one of them out.
The result is an imbalanced frequency which when measured will respond to
different frequencies even thought the mass remains as one. Wildcats theory,
however ill stated, is theoretically correct. I personally feel the results
will be very small however if enough teflon is used which would imbalance
the harmonic, a noticeable difference can very well be achieved. The only
proof positive is to try it and see.

Begin Quoted material

Teflon is an extremely stable plastic material. It is a polymer made up of completely fluorinated carbon, and long chains of atoms covalently bonded together with a chemical representation of C2F4. Teflon if characterized by its high chemical and thermical stability, and its resistance to adhesion. It is also used as coating in many different applications.

Teflon is a soft, waxy, opaque material that is nearly white in color. It is about 90% crystalline and has a molecular weight between 500,000 and 2,000,000. Teflon is polymerized from a monomer (a small molecule that combines with other monomers to yield a polymer called tetraflouroethylene), which is produced through a series of chemical reactions.

Teflon is inert to all solvents and chemicals agents except molten alkali metals and hot fluorine gas. It is capable of stand continuous exposure to temperatures ranging from near zero, to where it begins to depolymerize above 600 oC (1112 oF). Because of its resistance of the strong C-F bonds to chemical attack, Teflon is an inert, tough, and nonflammable material widely used for electrical insulation.

Some of the uses of Teflon include: In the chemical industry, Teflon is used for tubing, stopcocks, value packing and lining, and gaskets. It is also formed into rollers, bearings, conveyor belt coatings, and chemical resistant work surfaces. In the electrical industry, Teflon is used for insulation, coaxial cable parts, sockets, plugs, and bases. Teflon coating can also be used on all kinds of cooking utensils to prevent food from sticking. In addition, Teflon coating reduces friction and protects against corrosion. Teflon is also often used as a gasket material on automobile air conditioning compressors.

****
Aluminium ore, most commonly bauxite, is plentiful and occurs mainly in tropical and sub-tropical areas Africa, West Indies, South America and Australia. There are also some deposits in Europe.

Bauxite is refined into aluminium oxide trihydrate (alumina) and then electrolytically reduced into metallic aluminium.

Pure aluminium is a soft lightweight metal. Mixed with small, often minute, quantities of other materials iron, silicon, zinc, copper, magnesium, tin, titanium, lithium, chromium, tungsten, manganese, nickel, zirconium and boron - it is possible to produce an array of alloys with specific properties for very different purposes.

End of Quoted material
****
There is no aluminium or metal what so ever in Teflon.

There are metalized polyesters and metalized polycarbonates. These are not Teflon however.

Teflons chief advantage in RF applications is it's low dielectric constant (2). A dielectric constant in simple terms is a measurement of a insulators invisibility or it's ability to not absorb or interact with RF.

Teflon also has a high voltage breakdown. and withstands heat very well.

Insulators with high dielectric constants are termed lossy. These lossy insulators are not used for loading coil forms because they absorb some RF energy.
Examples of these would be rubber and neophrene.
The best dielectric constant is a vacuum (1). Air is next with a value of (1.0006).

>10pm...
>

That is the whole point, there... ajcogswell (or whatever the hell your name is). HAMs have the capability of accessing repeaters (so do we but I won't tell) and propagating a created signal, moon-bounce signals, and whatever.

The whole idea of CB that I hold true and dear to my heart (well not that much) is the amount of experimentation and true enhancement of radio. Clear, concise, solid signal transmission without the heartache of trying to attain a license to get there. Most HAMs lost that inquisitry (not all) after these HI-Tech Kenwood, Icom, Yaesu, Alinco rigs started coming out. Now, (excuse me guys from rec.radio.amatuer.homebrew group) if you turn around and look, most HAMs are leaving the Amatuer Radio world and coming back to CB because CBer's are still doing what Amatuer radio started out doing... making your shit work.

Homebuilding of some equipment (ok... amplifiers) is just one of the ideas that CBers are trying to enhance. Unless you're a QRP type guy, power is a requirement to "get out" on 11 meters. Think why 11 meters were not used at first buy radio amatuers... because at that time HAMs thought that it was an inefficient bandwidth for proper signal propagation (ARRL Handbook). Thats why there are so many amplifiers on 11 meter AM.

======================================================
What hasnt gone there way? You sold 3 amps total big deal I don't think
anyone is crying over that, just your stupid post stating so on the NG . I
don't remember you saying anywhere on the NG  you werent carrying the cookie
amps any longer why is that? The point of the matter is you wanted to take a
potshot.Just removing them off your page would have done the trick.  But you
forget if it wasnt for Davemade there would be no X-Force.
If you feel thats childish youll get over it.

This news group has become nothing more than a place for people, generally hams and cber's arguing about the FCC laws and how they are not followed by cber's. It used to be an interesting group, but it has turned into a flame parlor. What ever happened to the keydown amp debates, and everything else associated with the competition end of the CB hobby? oh well I guess all the RF police have made all the cber's get off the computer and go splatter instead of the keyboard they have ran them off to use the keyup instead...................

> >> element, it does not react to the signal.
>
> >Thats absolutely correct.
>
> Here you agree with Dave, that there is no interaction. But still try and tell
> everyone it works. Which one is it?

Well Frank if you could comprehend my original post, (which is painfully obvious that you didnt), you would clearly see why I am agreeing with Dave in this statement. I'm not going to keep repeating myself for you (although this is very entertaining for me). I would suggest you go back an read it again. I'm still waiting for your test results at 27mhz. When is this test going to take place? 1 year from now you'll still be babbling about this............................go figure it out Mr. Wizard.

For some nonsensical reason you somehow think that you have me up against your mental ropes which believe me, you do not. If you think I take your nonsense seriously, you should go out and upgrade that non existent Ham license of yours. Keep at it, someday you'll make General.................in another 43 years...

Because as a general rule, the atmosphere on CB is far friendlier and more enjoyable to most people than any o fhe Ham bands. I've listened in on 10 meters and from what I've heard it's fully of stuck-up

```
obnoxious people who consider themselves to be God's gift to radio.

You won't get any argument with me on that (improvement). Like I said earlier, any effect is slight. In my case, there was a slight decrease in skip performance and a slight increase in line-of-sight performance. And we're talking about slight - not enough to move a needle, but you could hear a slight difference.

Actually, because of that, none of this really matters. In the end, in my opinion the GPK-1 ground plane kit simply does not offer enough of a performance increase to justify its cost.

Considering that it would also be a huge pain to install the antenna with radials in a tree (the original question), I would recommend just using the basic antenna and forgetting the ground plane kit (sorry I brought it up).

Basicly, pressing and quickly releasing the function button will enable the blue colored function of any button to operate. Pressing any button without first pressing the function button will allow the grey colored

function to operate.
Pressing and holding the function button for several seconds will turn on the backlight for the display.

If your radio has been converted to enable all channel options, you can change the ten frequency bands by clicking the call button after you have taken the unit out of its default frequency of 29.300. This is done by pressing and quickly releasing to function button, and then pressing the call button and holding it for several seconds. The radio is advertised as having 454 channels...this is not correct, as the unit has 10 bands of 45 channels, for a total of 450. If you are cutting out on AM, it is because you are clipping the mic gain circuit, you can change this by adjusting the mic gain using the procedures outlined previously. It is not really a gain adjustment, but an EQ adjustment that will take some of the bass frequencies out of your voice.

Oh, by the way, you can not convert the radio for channels by pressing any combination of buttons in any sequence for any length of time. So long.

Sorry if the ham radio signature confused you, Green. I suppose it could be turned off when posting to this neswgroup, but that would be a hassle. I post to a lot of newsgroups where that signature is not offensive, and I also obviously post to ham radio newsgroups. To turn it off and on as I enter and leave the various newsgroups who be a real waste of time.

When I post to this newsgroup, I'm posting as a fellow CB radio user. Obviously I use a CB radio, and the issues and politics of CB also affect me, or I would not be wasting my time in this newsgroup.

As for the petition, my post was not some attempt to belittle CB radio. It was a simple statement of facts - the FCC is not going to change its rules. Petitions have been tried many times in the past (four that I know of), and each attempt has failed.

The FCC has given its reasons many times in the past, and I repeated those in my message (they are not my opinions - that is what the FCC said).

I simply cannot see any reason the current petition would change their minds.

Hey, where is the "yada yada yada" stuff coming from? I've heard it many times in the last few months. I was recently overseas - did I miss something with this?

I have a little Macintosh program ("PopChar") that gives me every possible character in the current font. The program places a small icon in the menu bar. I click on the icon and a small menu appears. I select the character and it is inserted into the text. Simple and quick.

I recently bought myself a CB radio because I hear it's all the rage
with you kids. I bought myself a RatShack TRC-236, to be precise.
If you pay no attention to the fact that it's from Radio Shack... Or
the fact that it's a walkie-talkie, it's an alright radio.
But I'm a little peeved at it's "output" power (which, I assume, is
transmitting power) of 2.5 watts. Now this may or may not be a stupid
question, but... [puts on flame-retardant pajamas] could I attach a
linear amp to this? Or, failing that, just modify it? Anything can be
modified, so I'd rather be flamed than told it can't be done.

Darn it, I just don't happen to have any Teflon spray around. Can I use "Pam" cooking spray instead? It has non-stick properties. Besides, Pam is so slippery, that signal would just slide right off the backside of the antenna.

And it would help keep the birds off too. If one landed on the antenna, he would never be able to keep a grip. As he touched down, he would simply spin around the element a few times and let go. One or two times doing that and he would never land on my antenna system again.

I like it. I need to talk to the makers of Pam.

The maker does not list such specifications, so I can only go off experience. About ten years ago, a Solacon A-99 made it through the north side of Hurrican Hugo mounted on a forty foot pole less than a mile from the beach (six guy wires on mast). A tree went down about seventy-five feet away, but the antenna didn't. However, it did get sandblasted a little.

In other words, its a fairly solid antenna.

Hey,
I have a question. What makes this radio or a even a Cobra 2000 so desirable that someone would be willing to pay this much money for? Huh?

You can buy a Galaxy 2517 for just a little more and get 3 times the radio.
I mean, so what if it's a Madison. You take away the clock and you got a

Washington. Take away the big box and power supply and you got a 148GTL. Big deal! I bought a Yaesu 757 GXII for $450.
Get a real radio if you're going to spend a ton of money.
When they say "what's the twenty on the big radio?", you can't answer can you?

Oh, by the way, you trolls take notice. Here is a ham with a 1X3 call sign
winking about the mod for extra channels on the ch 9 button.
Are you gonna bust his chops? I suspect not. I just put this out there as
a topic for discussion. I will not be participating because I am boycotting
the trolls. Have a good evening.

Harry

What's Sex?

There's this little Ozark family, Maw, Paw, Junior, and Sally.
One day Junior asks, "Paw, whut's sex?"
Paw sits back, thinks about it, and replies, "Well, Junior, I reckon yore
'bout ol'nuff to find out.
Maw, take off all yer clothes, jump up on the bed, and spread'n'em legs."
After Maw is undressed and lying on the bed, Paw looks at Junior and says,
"You see that there hole on Maw?
Well, jist watch ol' Paw."
Paw jumps on top of Maw and starts doing her every which way.
About this time, Sally walks in, walks over to Junior and whispers,
"Jun...Junior, wh-whut's that?"
Junior, being a man of the world now, looks back at Sally and grins, "That's
whatcha call 'sex'.
You see that there hole on Paw? Jist watch ol' Junior..."

Its not just the Rat shack.

My day job is at a UK-based computer/electronics company which ships
stuff for various embedded control systems all across the world.

I once got a message to ship a bunch of *software disks* to the USA -
attached to this message was the following note:

        -       "Please set to 110v"...

I have a Astron RS-70M power supply for sale. This unit has only been used 2 times and then put away. I have no need for something this big.
The price for this unit is $240.00 plus any shipping charges from Connecticut.

>Hmmm.... I imagine it would go something like this:

I think you have a good idea of what to do for your particular rotor. Maybe someone makes a rotor that has some type of electronic feedback which you could query for the proper info. Building your own feedback box which monitors voltage levels etc. would be tough, but if your up to the challenge it might be a fun project.

I think you should be able to find some com port support in VB. Your program will just query your feedback box for the current state of the rotor. Or, your program could just send the new coordinates to the feedback box and the box will decide what needs to be done to get the rotor in that position. You would probably want the feedback box to at least supply the current rotor state so your program could poll the box when its first run and display a little picture of a beam antenna which will be oriented on the screen according to how it is currently oriented on the tower.

I just need to comment on this one
there will ben no bashing or any thing
the only thing i will be talking about
is the way the programing is performed
on the micro controllers in the equipment

>>Radio & they are now interpreting that to include most current 10M rigs.

The mcu,s have the data masked on to the inboard rom at the factory
and it is not changeable.
The more lines of code the higher price for the mcu.
Which is the base price plus a specified amount per byte of data.
A large program may require a mcu with more rom thereby increasing the
base price of the production run.
That is why most manufacturers have the same mcu with different data
on it when it is going to be used in different equipment.
The only time it is economical to have a multiprogram mcu is when
there is only a small production run of many types of items.
That is when you can't afford a 2000 unit run of each type.
This is not applicable to ranger and galaxy radios.

Any thing a cpu or mcu can do is programed in to it.
You can not clip a wire that will allow the rig to do every thing
with out some sort of programing backing it up.
Every button press has a sub routine connected to with it.
Getting firm ware to work properly is hard to do with out other
stuff to worry about.

A channellized radio like a cb usually has a look up table.
Two values one for receive and one for transmit:
It continuously samples what channel it is on.
Then it samples the tx/rx line if it is low it will go

to the RX look up table and send that value to the
synthesizer.
If it is high it will go to the TX look up table
and send the appropriate value to the synthesizer

a multifrequency (IE) ham, aircraft, government, scanners and such,
Usually has a frequency register and increments it up or down when
you change to another frequency.
On receive
It takes that frequency and subtracts the IF and other stuff.
It takes that value and sends it to the synthesizer for receive.
On transmit
It takes the frequency and subtracts the LO frequency and stuff
and takes that value and sends it to the synthesizer.

They are two drastically different operating modes.
They are completely incompatible.

If you are able to cut a wire and get 300 channels.
That means that the look up table has them already.
All the mcu does is check to see if the jumper is there.
If it is then it will use the normal subroutines that agree
with what the front panel has on it.
If it is not then it uses another set of sub,s for the buttons.
The subroutine do not magically appear they are already
present but just ignored till the wire was cut.
The sub,s will allow the use of the rest of the look up table

On ham rigs you do not have a look up table for each of the
available frequencies which is a million+ possible frequencies.
That would be wasteful of memory and make the mcu sluggish.
You have the pre stated frequency register.

That means it can basically go to any frequency that the
synthesizer can handle.

All the mcu has is a table of frequency limits that make up
the ham bands
If the frequency register is within one of the limits then
the line that enables TX is puled high or low depending
on the setup.
If you cut the wire then the TX capability is always enabled

On the radios that allow you to enable wide band TX
from the front panel.
The code is present which is designed to allow you
to disable the TX limits on the radio.

On the rci 2950 the mcu is has two operating modes on is
the normal frequency display with internal frequency register.
the other mode is the hidden 40 channel mode with look up table.
If the mcu was design to be used for cb and ham radio there
would be two programs in the on board rom.

It would go to one or the other depending on if a input was grounded or not.
The thing is you would not be able to jump between one and the other with a press of a button.
Having two programs on the mcu requires more rom and a more expensive chip than making two different chips with different data on them.

That one button activates a long subroutine that does many things
If you are going from frequency display to channel display.

1 save current frequency to other memory that is out of the way.
2 save current settings like frequency split and presets to other memory.
3 save current frequency step and other stuff to other memory.
4 clear all spaces left by the previous data movements.
5 load look up tables to operating memory.
6 load new channel setting from other memory in which it was stored last time.
7 set data bits that indicate what subroutines to use when you get a key press event.
8 and last is to jump to the cb mode loop which will setup every other thing like setting the synthesizer and stuff

Not easy to say the least because you have to make sure the to different mods will not corrupt each other. (ie) Both sides of the firm ware using the same memory location at the same time.

Heck trying to get a 8051 mcu to control fan speed from the reading of a temp sensor and take the occasional interrupt to load a demand value from a data bus without wiping out or disrupting the working data is tricky not to mention doing the 8 steps above.

>>In a
>>related incedent earlier this year, the FCC would not allow a shipment of
>>Mirage RCI-2950's into the country, using this same logic. I think the

>>lists.......
>> Things are going to be changing...........
>>
>it would seem that icom, kenwood and yaseu should watch out. they'll be next.
>good bye legal mars and cap operations.

Kenwood and the others should use the inboard data buss to enable TX
it would prevent tampering.
If they already do then that means the wire was put there just for the purpose of puling the input low if it was connected.
if it is not then the radio ignores the frequency table.

All someone would need to do if they wanted to operate mars and cap is send a copy of there license to the manufacturer which would put in a mcu that allows wide band TX when it is being assembled.

>if i were to own a truck stop and had such a citation issued, i would surely
>take it to court. these were not "illegal cb radios".

The data in the firm ware shows that it has ben designed to operate on the
cb band.
Putting that much designed in to the firm ware means there is intent to have it
used
as a cb.
A radio that is intended to be used on the cb band must be type accepted.

If the mcu was designed to be used in a cb and a 10 meter rig
there would be no change over sub routine.
The presence of one indicates it was designed to be used.
Its only use is to jump from cb mode to wide band mode.
That implies it is being used as a cb.
If it is used as a cb then it is required to be type accepted.
A type accepted cb can't be able to transmit on non cb frequencies.
The other half of the change over program is specifically designed to
allow you to TX on none cb frequencies.

If the chip was designed to be used in a wide band receiver (ie) 25 to 30mhz
why dose it have the TX part of program when it is in the wide band mode.
The stuff that deals with offset and other stuff only slows the mcu down
and makes it sluggish.
If it was to be designed for extended receive when it was being used as a ham
radio why dos it not have a subroutine to block TX when out of the ham band.

>if my uncle, (general class), were still alive and wanted a galaxy 10 meter
>radio for his birthday, could i not buy him one?
>if it is true, as many have said, that ham radios do not need a cb type
>acceptance, why can't the galaxy's be sold in their 10 meter form?

99% of consumers dont feel there have to wait as it is there money they are
using to purchase products with.  If it were your money, you may wait for it.
As a consumer myself, I like to get what I am paying for A.S.A.P.  This was the
only problem with the Davemade products as they do work well.  We have built 5
successfull businesses with one being Exports R Us.  But Thank You for your
Input

I don't know who makes the Connex myself but I can tell you that I
have a Connex 3300 and the radio really kicks.  I have no complaints
about the radio at all.  I do pick up a little engine noise from it
but that is because I am using a Wilson 500 magmount right now.

HDV refers to High Drive which means that the amp can accept the 10 watts AM/25 watts SSB that the import radios are capable of producing. Probably involves some sort of built-in voltage dividing attenuating circuit to reduce the drive input to the transistors.

I have a freind who has become interested in getting into CB radios. I am pretty new in the circuit myself and asked several people about all the different radios before I bought one. I ended up buying a Connex 3300 and it is doing everything that I wanted it to. While I was looking for a radio I had someone give me a little 40 ch Midland, I don't even know what model it was. I gave my friend that radio and he had it modified and is getting about 14 watts off it now. He is now looking at getting another radio that is capeable of my watts bearfoot. Since I have only used the Connex I wasn't sure if there was another radio that might a good start for him that wont cost as much as some of the exports. Any info would be helpful. Thanks

I've done a little research. The software end of it could be done easiest by writing a DLL in C++ then calling the functions in the DLL from within VB. Basically, let C++ do the work, and design the GUI in VB. VB doesn't have functions for the level of com port access that would be required built in. One idea I had today would be to see if any of the rotor manufactorers would be interested in developing the hardware side. If I had some idea of what such a control box would be able to provide in the way of data thru the serial port it'd be a major help in getting the program going.

At any rate, such a program would be quite some time in development. I'm basically listing it as a future enhancement of the program I'm working on now. It's going pretty well. I find myself learning a lot as I try to get into database programming for the first time.

Later on....

If you stayed within the context of "for a DF antenna" it is
practically worthless. You can get better results by using
your own mobile antenna. Hold it horizontal. Point it toward
the source. You would hardly call that antenna a DF antenna.

DF antennas that show large differences in values of gain, typically
60db or more.

Well, since the boards inside are all similar in make up, and a little birdie
at ranger explained this to me, they are produces by the same factory. Nobody
knows who connex is. It is just economically priced so the shops can get it
out reasonable.

Ranger claims they make all the 10 meter rigs and then they are stamped with
the name that someone wants to pay for ie, Northstar.

One of our most popular radio's. Connex 3300.

I would check out Bernies Cb and EXPORTS R US.
http://www.berniescb.com
http://hometown.aol.com/cbs313
I haven't had any major dealings with Bernies, but they have a good reputation.
Steve at Exports is a great guy to deal with and will go out of his way to make you happy.
I would avoid Copper Electronics if you can. You will get a great price on the net, but by the time they sock ya with the handling charges ect it will cost ya more then its worth. They also have lousy cutomer service.
Just my 2 cents worth.

Sir, you had best be carefull.  Here in the states a lot of people call
Tandy etal the "Rat Shack" ["You have questions and we haven't got a
clue(SM)]. You could be mistaken for their offical spokesperson or
elaned on by their powerfull legue of lawyers to change your screen
name. Either would be a horrible fate to happen to a decent bloke!

Boman 930 AM mobile, in nearly new condition, this is a NICE full featured radio with built in SWR meter, dimmer, RF gain, stock mike, this rig had little use since new and looks it! Has the very easily modified 02a chip, but has never been modified or assaulted with a Golden Screwdriver. The RX is strong and the NB & ANL functions work great, the TX audio is strong and clean with a stock mike.

If you are looking for a nice radio built the way they used to be, or want to build a Hot Rod mobile, don't let the name fool you, this is the real thing!!!

$60 shipped to your door. ppd. MO only

> be doing it, and this wouldn't be the first time we had heard of it.

Sure they would. Every major base antenna company would voluntarily love to increase their manufacturing and packaging expense only to sell the antenna for the same amount of money. Its apparent that Economics wasnt your major in college either. You are trying to compare a home-made 3 ft tall antenna to what Antenna Specialists can manufacture and market on a large scale?............................Man, you just dont get it do you..................

More on the question.

You can use an inexpensive mobile on a power supply. Use a 6 amp power supply. Not a 3 amp. Sometimes 3 amps just isn't enough. Especially for the tinker'er.

Pro510xl or used radio will do and a good antenna. Omni directional is usually the choice of most. The real serious dx'ing person will go with beams. To much to start out with.

Cobra makes a small base station. 93
Cherokee makes a small am station CBS500
And then there is sideband.

Stock radio and antenna just getting started you can get an Antron 99 great antenna and pro510xl refurb and power supply for less than $150.

Most base stations are going to start new at $129 and up.
Plus the antenna. The antenna is going to cost if you have it shipped. Don't let the $39.95 price tag or $49.95 price tag fool you on an antron 99. The people that ship will charge you around oh guessing $12.00 shipping and handling. Maybe $15.00. Its best to go to your local dealer and purchase the antenna and coax. The antenna does not come with coax so be prepared to tell them how many feet you need. Mini 8x will do.

I hope this answer's some questions for the newbies out there. Unless you are sure you want to go powerhouse start with the basic cb. You can always upgrade if you like it.

And what sort of "friendly" DX do you work? Do you engage in QSO's or do you just exchange the "numbers" and move on to the next guy?

CB or ham radio, there's no difference in the style of "wham-bam" DXing. So what do you care if the guy on the other end is "stuck -up" if all you're interested in is the QSL card?

And speaking of stuck up hams, do you consider hams from all over the world to be stuck up, or is this strictly an american thing?

I find international hams (real DX) to be very warm and friendly. A friend of mine recently was in Germany, and managed to hook up with a guy he met on the radio some years back, through DXing, had a good German meal, a tour of the area, got to work DX from the German Guy's station, and had a very good time.

I think this "stuck up hams" stereotype has gotten inflated far beyond reality.

Reality is that hams are very friendly to people who act responsibly. When they "take an attitude" with someone, it's when the other person displays a lack of maturity, courtesy, or average intelligence. I've never had a problem communicating with other hams. I just know not to talk about subjects that would generate a negative bias (You don't say how great the Braves are at Yankee stadium). Once you get to know a person well enough to have debates, then you can let your opinions flow. But you can't expect to get on the ham bands, and act like a CBer, and expect a warm reception and instant respect.

Tell me kindly, just what material conducts at one frequency or temperature, and then insulates at another? Some conductors "conduct" better at some frequencies, than others, and some insulators "insulate" better at some frequencies than others, but I've never seen one that crosses over the fence, so to speak.

> The plain fact of the matter is that I personally know a computer

I am also quite familiar with manufacturing processes, as I've had some experience with it from my various jobs throughout the years. I've never seen a teflon based product applied for conformal coating. The question still remains, which is it? Conductor or insulator?

But you do. You see, if a scientist or anyone makes a claim, especially a far-out one, the burden of proof resides with the claimer. In other words YOU have to prove the validity of your claims. WE do not have to disprove them.

I can claim that there are little green men on the moon too, does that automatically make it true, and up to you to disprove? I think not.

> If the people who read my posts
> cannot comprehend them, I havent any control over that. What you find on

> if one so chooses.

This has nothing to do with personalities. This has everything to do with RF currents, and antenna characteristics, as well as the properties of conductors vs. insulators.

You've presented a process, which uses a material that starts out as an "RF insulator", but then morphs into a "conductor", and now it's a conductor at one frequency and an insulator at another. If this isn't an example of a tap dance, I don't know what is.

So... Now that we've once and for all established the electrical
properties of teflon, (which I think most of us already knew), how can
teflon insulation cause an antenna to become more directional,
especially since it has a low dielectric constant?

This may be true. Ham operators have had to suffer before, due to FCC actions to thwart illegal Cbers. Case in point: HF amplifiers.

Well, there are a few different ways of looking at it. It's plainly obvious, what the main market is for "export" style "10 meter radios". If these radios were made more like the HR-2600, with useful ham features, but useless for Cbers, then the rig would not be a target (It would also not be very popular with the CB crowd either) Icom, Kenwood and Yaesu radios, on the other hand, are not in high demand by Cbers, simply because they are expensive, and have features that are wasted for the typical "good buddy". The ham market for "real" HF rigs is strong on its own, so they need not fear any repercussions in sales due to any new technical regulations.

This is also a marketing game. The manufacturers of these "export" type radios know full well where their main cashflow comes from. They aren't selling to hams. So they try to accomodate the features that facilitate easy CB operation. They walk a fine, thinly veiled line, when they call their products "10 meter ham rigs", but have 40 channel dials, roger beeps, echos (Please, like what ham would want that?), and a band switch that is obviously meant for something, but is not fully functional out of box.

The FCC will most likely amend the rules as they did when they toughened the rules for HF amplifiers. They will spell out specific rules, and conditions that must be met in order to be sold as "10 meter ham radios" Rules such as no capability to modify for 11 meters (similar to the cellular block in current model scanners). Icom, Kenwood and Yaesu may have to modify their tuning code to exclude 11 meters from the CAP/MARS mod (General coverage EXCEPT 11 meters). The FCC will eventually win the battle of rulemaking. Any company then trying to market "export only" radios will have to play the contraband game if they want to sneak them into the US. Many will succeed, some will fail, and may be slammed big time. Time will tell...... The government can't stop illegal drugs, so if the CB market is big enough to justify the risk, people will still sell illegal radios, but they will become more scarce, and more expensive as a result.

Yes, they can be modified to work on 11 meters. The audio on AM is mushy and not very pleasing. However, it will work fine on SSB.

I acquired both a new RCI 2980 and Galaxy Saturn base Stations. The Galaxy is spoken for, but the RCI (Same Radio) is still available. Brand New, and then opened, converted, peaked and put back in box for sale. I traded a larger item to a dealer for these. Will sell for $400 plus 20 for shipping to first acknowlegdement and USPS money order. Already double-boxed, will put in one more outer box for safe shipping. Thankx

HA, ROTFLMAO! Dave, whats with this "WE" stuff? You havent offered anything tangible to this discussion except for some person hyperbole. At least Tnom is investigating, and even Lowtower is performing experiments............Silly as they are. Below you can enjoy some interesting reading taken fron the US Patent website. Make sure you pay particular attention to paragraph 2.

Clipped text:

Teflon Fluorocarbon Resin: DuPont G8338220210

**Statements regarding behavior in a flame situation are not intended to reflect hazards presented by this or any other material when under actual fire conditions. The following characteristics contribute to the unique properties of Teflon fluorocarbon resins:

. Nonpolarity:The carbon backbone of the linear polymer is completely sheathed by the electron cloud of fluorine and aluminic atoms, much like a wire core is protected by insulation coating. This ensheathment, and the angles at which the carbon-fluorine bonds are disposed, causes the centers of electronegativity and electropositivity to be perfectly balanced across the polymer chain cross section. As a result, no net charge difference prevails. This nonpolarity of the polymer is partly responsible for its lack of chemical reactivity.

. High thermal stability: Due to the strength of the carbon-fluorine and carbon-carbon single bonds, appreciable thermal energy must be absorbed by the polymers before thermal degradation. The rate of decomposition of a part of Teflon depends on the particular resin, temperature, and heat exposure time; and to a lesser extent, pressure and nature of the environment. At maximum continuous service temperatures, thermal degradation of the resins is minimal. For example, at 400�C, Teflon FEP is measured at 4/100,000 of 1 percent, and Teflon PTFE at 1/100,000 of 1 percent. At high processing temperatures, adequate ventilation is recommended.
between its surface and another material and the comparatively low force to deform.

. Low dielectric constant and dissipation factor: Teflon provides low, if not the lowest, values for these parameters. These low values arise from the polymer's nonpolarity as well as the tight electron hold in the ultrapolymer bonds.

. Low water absorptivity: For Teflon to absorb water, the surface must remain wet for a long enough time for water to become physico-chemically associated with the polymer chains, and then it must become included in the polymer bulk structure. Water is a very high energy material and Teflon has a very low surface energy. Therefore, these events are energetically incompatible and only occur under special circumstances and to a small extent.

. Excellent weatherability: Weather includes light of various wavelengths (IR, visible, UV), water (liquid or gas), other gases, and normal temperatures and pressure. The physical and chemical makeup of Teflon makes it inert to these influences.

. Flame resistant:Teflon will burn when exposed to flame, but will not continue to burn when the flame is removed.

. Excellent toughness: Some mechanical properties of Teflon resins are shown in Table 1. Toughness characteristics are high and differ somewhat between resin types.

To the old cb collectors out there. Folks who buy cb from tube
up to the older 40 channel units.

Hi,

I have a few. Some in better shape than others. To me they are junk and taking up shelf space, so I want to sell them off.

If you buy older radios to collect or even to use, e-mail me. The shipping may equal or exceed in some cases the price marked on some of them. The better ones will be priced slightly higher.

Even though some of them may be in working shape and/or good physical shape, I am not going to bother to bench check them for frequency accuracy, modulation percentage or power out. In other words, if the modulation needs turned up or down or the rf, it's up to you to take care of. I'm selling them, even if in good useable condition, AS IS. No returns. ALL of the units did work when last quick checked. May need tweaked to your satisfaction. MOST are fairly clean. The cases may show some wear. MOST are 7 to 9 on a 10 scale in looks.

These radios were all obtained in partial trades for other new items bought from my shop.

Inquire if you must before dealing. I deal on all the news groups quite often. USUALLY Rec. Radio Swap, Rec Radio CB, and Rec. Radio Antiques. I usually don't post ads, but answer them for people seeking things.

Thanks for reading

GREAT POINT DAVE BUT, TAKE YOUR OWN ADVICE....
THE ONLY PROBLEM HERE IS THAT IN THIS CB NEWSGROUP WE HAVE HAMS WHO
COME HERE TELLING CBER'S WHAT TO DO AND GUESS WHAT??? THEY DONT LIKE
IT. USE YOUR OWN CONCEPT... IF YOU GO TO YANKEE STADIUM AND SAY THE
YANKS SUCK OR SOME NEGATIVE REMARK, GUESS WHAT?? YOU WILL PROBABLY GET
YOUR ASS KICKED!!! ONLY DIFFERENCE HERE IS ALOT OF PEOPLE CAN SAY A
WHOLE LOT OF SHIT AND NOTHING HAPPENS.

you Mr. Wildcat are nothing but a dumb asshole.  if were as simple as
you state to improve an antenna at a minimal cost. every antenna
manufacturer would be doing it. why would it increase the packaging
```

cost? an improved antenna would not be sold at the same price, it
would be sold at a higher cost. after all its new and improved. seems
you are the one that economics was not your major in college either.
crawl back under you rock dipshit,were all tired of your bullshit.

Greg;
I only know of a 2200 mile weekly commute to Ca from Mn and return. My CB helps with alot of info, and its on constantly. Especially, when traveling on hwys 18 & 20 in Wyoming, where deer cross the roads in herds. As U know this can cause much damage to a truck at 70+ mph. Its true that 4 wheelers have CB's too. Mine keeps me informed and sometimes awake at 4am in the morning. I hope to "beef it up" and talk to other CB'ers farther away who are sometimes up past their nap time, like myself. There is always the occasional base CB'er with the BIG radio, and an annoying attitude, I laugh at, and keep them amused while traveling through their airspace. Most of their airspace is between their ears........LOL LOL!!!

Just thought I would reply.......

The FCC is definitely taking a curious approach to this dilemma. They had the manufacturer of these radios on trial but were unable to make a case against him using the existing rules. Instead of changing the rules so that they might be able to enforce their rules at the source, they have opted for trying to intimidate individual shop owners with the same lame rules that couldn't hold up in court. I'd like to see someone call their bluff and take them to court, but I'm sure they know that most individuals don't have the time or resources to fight.

I use an A-99 here in holbrook, arizona
where winds sometimes reach gusts up to
100 miles an hour........not a problem!
The antenna is 80 feet to the top.

Jack

I am wanting to buy a crank up or self supporting tower near NC. Must be at least 40' and no more than 100'. Must be able to support a tri or quad element 10 meter yagi antenna. I can pick up at your location.
Please email blueglow@mindspring.com directly if you have any information.

Thanks,
Mark

Was this in a Jeep Cherokee? I am thinking about buying an SUV real soon. One thing I like about them over cars is their off-road ability and the fact that its eaiser to mount CBs. I have one question. Would it be possible to mount and antenna on one of the side rear-view mirrors like truckers do? Thanks, ryan

I was in a T-600 KW for a while and the amp getting into the computer
wasn't the problem. It was the computer getting into the receive of my
radio, about 7 pounds of solid noise. Turn of the engine (Detroit 60 series)
and QUIET!
Glad I got out of that ride.
Good Luck

Hello Debbie: I think the idea of another auction web site is great. But have you tried to buy anthing from the Yahoo auction site? I have, what a mess! I have never seen anything so fouled up.

E-bay is slow and off the air on Fridays, but other than that, it runs pretty good,
in my opinion.

The way Yahoo runs ....
I'd have the boys and girls in charge of the Yahoo software, hand cuffed, fired, and shown the door, with a snotty letter to follow.

Jay in the Mojave

>He knows where you web page is,
>he know what your e-mail is,
>he know if you got it or not
>because they've been working on this a whilllllle.

he's going to need more than this like an actual record of an illegal action.
he can't just read a post or e-mail and come jack-booting his way into someones home without probable cause.
he can't "bust" someone for what they say or write on the net.
if someone were a congenital liar about what they had or did and he used this to "inspect a station", he would have the paint sued off his walls and, i'm sure, he knows this.
thanks for the warning but, at least, try to keep it within the relm of probability and knock off the attempts at scare tactics as they make you look like an idiot and probably don't do you or mr hollingsworth justice.
trying to associate him with the McCarthism of the 50's doesn't do anything for his credibility either.
whith all of this inaccurate hype that you and the other rf police are spraying arround about e-mails and sending the things said here to him, the first time someone gets busted for a legitimate offense, there will be a thousand shaking cb'ers comming to his defense saying that it was a fixed or other illegal arrest because of all the hype spread on the net.
it isn't just you but you and all the other holier than thou hams who think they control ALL of the spectrum and just can't seem to occupy all of the unused spectrum assigned to you.
if ham radio is such a bargain and and so great, why are you and like minded hams here harassing us lowly sinners and not spending more time filling your spectrum with the secrets of the universe before UPS starts chipping away at 220 again?
is it just to gloat? if so it just makes you look like a bunch of high-horse bullies who have a need to pick on the little guy to fulfill some neurotic need of you own.
check the yellow pages under psychiatrist or ask your family doctor for help.
i'm sure he can be resourceful.
i wouldn't bother going to the arrl as they would probably be like a compensation doctor. give you a clean bill of health and send you out to do more damage.
have a good day.
jeff

The 101 is a great AM radio on CB. Never had any problems when I had one. The filter is a must due to receiver overload. One of the best sounding transmitters I ever heard on AM. I guess some people may have had a bad one or did not know how to operate it properly.

Are you proud of this? Do you enjoy things like this? Your nothing but another of those Rick and John John wanna-be-fcc-cops. Llike I told them go take your small little defective toys and go play in your own sandbox with someone who cares . Your a sick little man. Psychiatrist time.

the flame thrower is off.
why do people spend thousands of dollars to install general electric jet engines on cars just to drive 1/4 mile on a race track?
i could do that and get to the same destination in my stock caravan. it would just take me a few more seconds to get there.
why do they install 300 or 400 horse power engines in production cars to drive 70 mph on most interstate highways when a yugo could do the same on 75% less gas? (i've done it before)
why do people install 800 watts of audio power in a honda?
i think it's the need for competition.
in racing and audio systems, there are certain criteria to be met in order to win the contest, ie; visual and equipment standards and in the case of audio,

how close the equipment comes to looking like a factory installation job.
i can't speak for the shoot outs but i suspect that there are certain criteria to be met and they take pride in their equipment, and, with the investment that they made in everything else why drive it with a cheap radio?
who puts regular gas in a peroxide rocket car?
i must admit, it is kind of decient of them to try to restrict their shoot outs to 1 channel when ever possibile and leave the other 39 alone for everyone else.

jeff

<<<he's going to need more than this like an actual record of an illegal action.
he can't just read a post or e-mail and come jack-booting his way into someones home without probable cause.
he can't "bust" someone for what they say or write on the net.
if someone were a congenital liar about what they had or did and he used this to "inspect a station", he would have the paint sued off his walls and, i'm sure, he knows this.
thanks for the warning but, at least, try to keep it within the relm of probability and knock off the attempts at scare tactics as they make you look like an idiot and probably don't do you or mr hollingsworth justice.
trying to associate him with the McCarthism of the 50's doesn't do anything for his credibility either.
whith all of this inaccurate hype that you and the other rf police are spraying arround about e-mails and sending the things said here to him, the first time someone gets busted for a legitimate offense, there will be a thousand shaking cb'ers comming to his defense saying that it was a fixed or other illegal arrest because of all the hype spread on the net.
it isn't just you but you and all the other holier than thou hams who think they control ALL of the spectrum and just can't seem to occupy all of the unused spectrum assigned to you.
if ham radio is such a bargain and and so great, why are you and like minded hams here harassing us lowly sinners and not spending more time filling your spectrum with the secrets of the universe before UPS starts chipping away at 220 again?

is it just to gloat? if so it just makes you look like a bunch of high-horse bullies who have a need to pick on the little guy to fulfill some neurotic need of you own.
check the yellow pages under psychiatrist or ask your family doctor for help.
i'm sure he can be resourceful.
i wouldn't bother going to the arrl as they would probably be like a compensation doctor. give you a clean bill of health and send you out to do more damage.
have a good day.
jeff>>

I tend to agree, good buddy. Posts like this only encourage anti-legal feelings. I say enough with the lame warnings, because no one here is interested in legal operation. If Riley says he's going to start busting, then he should get down to business and start busting.

Excuse me??!?!?!
A Black thing???
Are you prejudiced or something?
It's a multi racial every color goes thing. It gets all mixed up! Oh and they speak a special language too! That's probably why you think it is a Black thing.

It is also all in the competition. Like a bunch of guys chasing a pigskin on Sunday. Or watching a dog chase a stuffed rabbit around a track. It's all in the competition. Of course the parties aren't that bad either. Or the socializing of good friends. Those are just added incentives.

Only if you put a trucker style mirror on it. It's difficult to
do a proper installation on a plastic mirror.

i am happy for your sucess but i'm confused over the "brand new" part as these
radios have not been made in many years.
if you haven't noticed, they have not made tube CB radios in a long time. this

is not to detract from the quality of the 201-A but i just thought i would let you know.

i bought an rs-232 from rad shack a few years ago. it's the one that resembles a cherokee ah-27.
i took my watt meter and a dummy load with me to check before i bought it.
i bought it at 2.5 watts on high and 900 mw on low.
as soon as the transaction was compleated, i handed it back to the guy with a request that it go in for warranty service as the radio didn't put out the advertised "full legal power".
i also told him if it came back with anything less than 4 watts out from the antenna plug, that i would expect my money back or they would hear from consumer services for fraud because it didn't put out the full legal power as advertised.
it came back at 4 watts and, for a walkie / talkie and their associated limitations, i'm pleased.
good luck.

jeff

Hey, they are producing low paying jobs in the local community. Since just about everything is made overseas, you can thank the free trade politicians for that, we are basically stuck with what we get from them. Not much incentive for the employees to become great at something if they are never gonna make decent money at it. All the manufactures move overseas to where they can pay a worker 25 cent and hour and then sell the product over here, without tarriffs, for 500% profit!

it seems that you and the rf police can't see past the words "linear" or
"modifications".
if you look at his e-mail address, you'll see that he is from the United
Kingdom which, contrary to popular belief, the fcc has no control over their
radio activities.
i can't speak for you as i don't remember your id'er but the rest of the ham rf
police seem to think that the fcc is associated with interpol as they don't
consider the fact that this is an international forum and there may be other
countries that haven't signed the itu treaties. Britain may have but the rf
police use the fcc as a blanket threat against anyone who may so much as ask
about amps or mods even when it might be legal in their own country. (heaven
forbid!!!)

hello,
Please can you help me out.
I am the new chairman of a new c.b. club called,
SIERRA JULIET (C.B.)D.X. GROUP hear in Swansea.
my name is Dennis, (Scarecrow) and the members would like to know what is
the proper role of a President i.e. what dose he do within the club.
Thank You,
Dennis (scarecrow)

>
>And speaking of stuck up hams, do you consider hams from all over the
>world to be stuck up, or is this strictly an american thing?
>
it must be an American thing because only in America do they issue rf police
badges with amateur licenses.
>I think this "stuck up hams" stereotype has gotten inflated far beyond
>reality.

no, it pretty much stays within our borders.
i can't remember a single post here from a foreign ham sitcking his nose into a
U.S. cb'ers business for which we are grateful.
>When they "take an attitude" with someone, it's when the other person
>displays a lack of maturity, courtesy, or average intelligence.

which proves what i've been saying all along about the hams intolerance for
people of varying personalities.
i agree with the courtesy part but your definition of "average intelligence" is
subjective. someone with a severe learning disability probably won't get a
license but someone with several phd's in astrophysics, medicine and the arts
may consider people with your background an idiot.
someone who is less mature than you may seem childish but someone who is more
mature than you may get a mental image of you as an adult in diapers.
everyone is different but the elitest, intolerant, inflexable and single minded
"destroy the varient cb'er" attitude that you and other hams display here
really doesn't help your credibility either. especially if it's on frequencys
that don't concern the hams as hams or cb'ers. if you don't go into the
out-bands and out-banders don't stray into the ham bands, then it's really none
of your or any other hams business, it is?
the only other explaination is this rf police / gi joe attitude that everyone
puts out here that they think their license is a license to control the entire
spectrum when the bulk of your authority lies in the same relm of any other
citizen which is to make your complaints of interference or encroachment known
to the fcc. no more, no less.
even the OO's are supposed to be monitoring the ham bands and not the out bands
or cb.
jeff

Hi Jay,

Did you go see that tower?

#137 asked me to pass him your current e-mail and telephone number. He was also interested in the tower.

If you met up with Marv, did he mention his home brew amp's? His work is serious with auto tune in the final, the full 10 yards.

I tried e-mailing him twice, but it bounced, even when I de-spammed his AD.

Where are you 137?
>Hello Phil: Thanks, Update you Golden Penetrator 500, What update?

I think I once told you I still own an original Hy-Gain Golden
Penetratior.

You told me a couple of months back via e-mail what work you had done on
yours. Hence my comment above. After I read your post I then visited
Woody's web site.

Phil / UK

Have run a few auctions on ebay. I like it but it does cost. Yahoo on the other hand is not doing to badly. It keeps track of the hits on your item. When you are getting ready to post many items on an auction house for the first time Yahoo seems like a good place to start.

I found it to be smooth other than a little miscommunication between my buyer and me.

Its just another avenue that some are using. Some have many feedback rating attatched so they are using the service.

I will keep my eye out for the glitches and its nice to know. I just think that ebay charges too much.

GoldAuction is another place that has a nice site. I have used onewebplace as well.
I like the idea of a hit counter. Ease is what I need. My computer makes me work for everything I do.

I wish something could be easy. I do thank you for the advise. At least you didn't flame me for mentioning it. Thanks again. I will list on ebay too. I will go with the site that sells the most. I have an abundance of R/C stuff I am getting ready to put up.

I dont have the time for that right now, and if I had the time to change it I would spend that time on somthing else that I really want to work on, like

MY personal projects. If it sells it sales, if it doesnt oh well. I will
just keep using it for my driver every day like I have been doing. I use
this as a stand alone box shooting skip on the bowl everymorning and it been
working great. Besides on the Super Bowl who needs a pre amp? If I cant
hear ya I sure aint gonna talk to ya!!!!

Oh yeah and when I did have time I modified the board to except the new
flange type transistors.

pllo2a@aol.com wrote:
<<everyone is different but the elitest, intolerant, inflexable and single minded "destroy the varient cb'er" attitude that you and other hams display here really doesn't help your credibility either. especially if it's on frequencys that don't concern the hams as hams or cb'ers. if you don't go into the out-bands and out-banders don't stray into the ham bands, then it's really none of your or any other hams business, it is?
the only other explaination is this rf police / gi joe attitude that everyone puts out here that they think their license is a license to control the entire spectrum when the bulk of your authority lies in the same relm of any other citizen which is to make your complaints of interference or encroachment known to the fcc. no more, no less.
even the OO's are supposed to be monitoring the ham bands and not the out bands or cb.
jeff>>

First off, I don't agree with the hams who post silly "fcc warnings" here. And you are right in saying those types fit the "rf police" stereotype you have given them. But I strongly disagree with your assertions that any ham (or cber) who expresses an opinion against illegal operation should be instantly branded as some kind of Barney Fife fascist.

Correct me if I'm wrong, but you are a vocal supporter of illegal CB operation, is that not right? Of course, you are free to express these ideas in an internet newsgroup forum. But be aware, it's as if you are walking around in public wearing a sign that says "I'M A CB OUTLAW AND PROUD OF IT". Yet you seem shocked, surprised, and angry when anyone notices you - and disagrees with your stance. Perhaps you assume that 100% of the population shares exactly the same beliefs as you do. So perhaps a bit of tolerance is in order on *your* part.

I'd also like to point out that, aside from the occasional stupid and counterproductive "fcc warnings" I mentioned above, many hams come into the newsgroup to post responses to such inflammatory threads like "Hams Suck", "Ham vs CB", and "Why I Am Not A Ham". Inevitably, these kind of threads degenerate into petty squabbling, name-calling, threats, and counter-threats. I think it's unfair to tag people (hams or otherwise) who get sucked into these dumb flame wars as elitist, intolerant, inflexable "rf police wannabees".

Your point that 27 MHz should be of no concern to hams is well taken. But the sad fact is that CBers don't live in a vacuum. Unfortunately, what happens on CB reflects on ham radio, as the two often are confused in the public eye. IMO, everyone has a legitimate right to disagree with people who encourage splatterbox amps or any other practices that give all "radio hobbyists" a bad name, whether it's in this newsgroup or any other.

Hey Jack. You measure your antenna height from mounting to ground not to the top of the antenna. Just for your info for next time.

Please place your 'flame-throwers' on stand-by... I have been into CBing for 25+ years. One thing I could NEVER understand, is why a person would go out and buy a "big' radio, and a "big" linear and then ONLY use it on channel 6 (27.025) A friend of mine ran a Yaesu FT-101EE into a Yaesu FB-2100 amp SOLELY on channel 6. And I've heard about the 70,000 watt 'SUPERBOWL' mobiles. But WHY??? What's up with a "Shoot-out." A person COULD run only 100 watts on a sideband frequency of 27.355-27.405 and work THE WORLD !!! (providing of course, it was legal.) So... BIG radios or not, Europe is just a 'key-up' away... on sideband. And if you are ONLY running ONE channel (ch. 6) go to Radio Shack and get a ONE-CHANNEL radio. Surely it MUST be cheaper than a new 2990. FLAME ON !!

I snoozed and losed on these, surplus electronic place near by was selling them for $200 a piece. I couldnt find the specs on them right away to see if they were applicable to my needs and when I called back to see if they still had them they were sold. So please dont tell me that they were equivilents to 3cx10000 or something!!!!

Yes. All the derogatory statements from some HAMS and some CBers (to decent
HAMS) will cease. Yeah, and while anyone is waiting for that to
happen.......

Actually, I hear that all CBer's radios will accidentally transmit and
receive on channels other than the regular CB band. <g>

This whole business of stereotyping and categorizing a specific group, arguing their differences, strong points and weaknesses is pure garbage.

In every society, hobby, group, club, etc, you will find people who you agree with and like or disagree with and dislike. I haven't met one person yet who represents to me either CB radio or Ham radio as a whole. I judge them individually, not collectively. I've corresponded with people over the net who I hoped would never grace my email folder again, yet I continue to do so with others because everyone is not the same. For every person like that, I've found one or two who I hoped I would correspond with again. I suspect most people feel the same way.

I'm not a ham. I most likely won't ever be one. I don't have anything against those that are. Why should I? It's just not my cup of tea. I happen to like CB radio. The reasons for this are irrelevant. I would like to see some of the CB rules changed. In a democratic society, I have that right. If a Ham operator thinks these changes are ridiculous or a waste of time, it is of no concern to me. The only opinion that matters to me on whether or not something is a waste of my time, is my own. I really can't see why a Ham operator would be concerned with a petition filed to change a CB rule anyway. If he's also a CB operator, that's different. Then he's speaking out on something that would effect him or her and a hobby they participate in.

Now, arguing over which hobby is better and so forth, that I consider a waste of time and arguing only for the sake of the argument.

Jim

I am wondering what all cb people are doing for potential Y2k disaster planning. If there is some kind of crisis will there be a channel for getting info and who will coordinate how this gets done? Are any cbers getting generators and batteries in order to prepare for Y2k and what do you think is necessary to run without electric current from utility companies? Can the superbowl high power mobile stations be used for emergency information? Can the skip talkers be prepared to help out if need be to pass messages? Or freeband used to pass data between countries? Should cb people ask local police or Fcc how they can help? If the worst happens, I am wondering what role cb can play to be of benefit to all.

You are coming under fire from the "engineer wanna-be attack dogs because someone ask a question about D/F antennas. Your response how to build one had flaws in it. So now you have "newbie" out there wasting his time spraying teflon on his antenna. People that now better wouldn't even waste their time, but what about this new guy that thinks you told him the truth?

I posted that to be facetious. I know that cutting the tip at an angle would not make it directional. But it still stands up to your incorrect theory about an antenna that has two resonant points. After all the longer portion of the diagonal cut would be resonant at a lower frequency than the shorter potion of the cut. BUT it still will not be directional. It will be more broad banded. Your still under the assumption that adding mass to one side of the antenna will make it directional. It won't, I posted an example which you chose to ignore. Teflon is an insulator, why do you think it going to change the resonance of one side of the antenna? According to the theory that you are stating, I should be able to build a dipole out of TW wire, cut the insulation off one side and make it directional. Sorry that won't happen.

My biggest complaint about Rat Shack is they have a lot of things, but carry next to nothing in the stores. Most of the time you have to order it and wait to get it in the mail. They didn't have a power supply, AC to DC 9 volts @ 1 amp, so I had to go some where else and THAT place not only carried it but had it in the store.

I did not know Pyramid made amps in the range of 52,000 amps???? You could run a poop load of radio's off of that seeing it only takes 10 amp to run my radio. Or maybe he is running a really really big amp??

just yanking ya

I am sure you meant a 52 amp PS. ???????

I agree with you Jarry.I think my ssb cb radio will let me talk to what ever authority or people out there needing help.On ssb you can get world wide information or listen to govt brodcasts.I got a generator to run my base since we cant trust our power supply.I do think the FCC should set up a national y2k cb frequency or channel.It would be great if they set one up .It would benefit us all.

Mike

Boy, I guess I'm the only one here whos been around for a wile. When you guys say CB has never been organized, I guess you mean the new CB. When I was just getting into CB in the 70s, they had CH 9 drills all the time, just for dissasters, and getting help for people. I guess we won't see that for a while. Ham wasn't the only way to go back then. Things were pretty cool, and very little of the bad mouthing and stupid macho games you hear now. Just a LOT of people doing cool things like talking and getting to know each other.

I agree! And I ask that all who agree or disagree post and say so!

This is the US Gov't. we are talking about here folks, not known to
prioritize its citizens, and the FCC especially is pretty incompetant.

Why don't *WE* make the decision?!? Why not keep it as channel 9,
as many radios have instant channel 9 and "newbies" and people whose
idea of a CB is a $30 Rat Shack thing with a magmount antenna
only know what their Politically Correct Rat Shack manuals tell them,
and that is to use channel 9.
We should resolve to only use 9 for emergencies and system checks,
and of course we must have a secondary channel decided upon as well.
And an SSB secondary, and a simple procedure for calling and we have
got it made, just spread the word.........

For those of you who run legal equipement on legal
frequencies and have never had someone come tell
you that you are getting into the TV or Phone, the
following does not concern you. All others better have a look
----
From: The ARRL Letter
Vol. 18, No. 43

* Hollingsworth reiterates pledge: During the Southwestern Division
Convention October 1-3, FCC Legal Adviser for Enforcement Riley
Hollingsworth reiterated a pledge to undertake two amateur enforcement
initiatives in the coming months:
****encroachment of unlicensed activity on 10 meters ****
****AND improper or illegal marketing of HF amplifiers--****
****especially those capable of 11-meter operation.****

You better watch out,
you better not pout,
you better not cry I'm telling you why,
FCC's Riley is looking for youuuuuu.

He knows where you web page is,
he know what your e-mail is,
he know if you got it or not
because they've been working on this a whilllllle.

Yes sir Guys and Gals, he is most certainly serious about this agenda. This is your wake up call if you care to listen. But it is most CERTAINLY your right to ignore the hell out of it.
And if you don't care for the above bit of info,
check out the following that happend to a "Ham".
Just a little clue to you if you care to have one.
Good thing this fellow is a Ham or he wouldn't stand a chance.

From: The ARRL Letter
Vol. 18, No. 44

A Mississippi ham arrested for interfering with his neighbors' telephones is awaiting a decision on his request to throw out the complaint on the grounds that the state court has no jurisdiction in the matter. ARRL member Bennie Stewart, KJ6TY, of Meridian, was arrested and charged September 10 after a neighbor filed a complaint with the Lauderdale County Justice Court.

Stewart, a ham for 12 years, appeared in court October 26. He says his attorney, Felecia Perkins, filed a request to dismiss the complaint, brought under a Mississippi law that makes it illegal to "intentionally obstruct, injure, break or destroy, or in any manner interrupt any telegraph or telephone line or communication thereon between any two points." Stewart maintains that only the FCC has jurisdiction, and his station is operating properly.

The ARRL has provided legal defense assistance to Stewart's attorney. The case has been continued while the court mulls its decision. If convicted, Stewart faces a fine of up to $500, six months in jail, or both.

"It should have never gotten to this point in the first place," Stewart said, adding that he's tried to work with his neighbors regarding telephone interference ever since the first complaints arose three or four years ago. "I put myself on a schedule," he said, explaining that he operates on 40, 20, and 10 meters only on weekday mornings. He says he never operates on weekends, only runs 100 W, and no longer owns a linear amplifier.

"The problem is not here," he says of his station.

A retired professional photographer, the 60-year-old Stewart is confined to a wheelchair. He described his arrest--which he says took place in front of his three-year-old granddaughter--as "humiliating."

Stewart says he expects the court to rule on the case very soon.

What's that saying they use in poker? Oh Yea, I remember,
"read em and weap boys, read em and weap"

Looking for opinions on the new NightRider series of radios. We made several changes and the peaks looked very interesting. We were really impressed with the face plate looking like an Indidglo watch at night with no glare. Performance was super just like we were told it would be. Would like to hear from others that have tried these radios since there arrival.

I own two Macintosh G3 laptops and two PC desktops (one each from my wife and I). We both prefer the Macintosh laptops - the desktops may go soon.

There may be some changes concerning the way this is handled, but I seriously doubt that the FCC would tell the DoD (MARS, etc.), and the DoT (Coast Guard Aux, etc.), that they cannot have their Ham radio operators, with their equipment, anymore.

My biggest complaint is when other stores don't have products because they think Radio Shack carries it. Too often these chain stores (corp. owned or franchised) reduce consumer choice, lead to inferior products as other stores reduce prices to compete, promote lower work wages, take money out of the community, and are generally of little benefit to the community.

Yahoo auction house is free to list and it has lots of stuff. Not sure why you would go to ebay where they charge to list when you can go there.

Check it out.

Lets make that the biggest auction house. Make a stand.

PLP wrote:
>
> I recently bought myself a CB radio because I hear it's all the rage with you kids. I bought myself a RatShack TRC-236, to be precise. If you pay no attention to the fact that it's from Radio Shack... Or the fact that it's a walkie-talkie, it's an alright radio. But I'm a little peeved at it's "output" power (which, I assume, is transmitting power) of 2.5 watts. Now this may or may not be a stupid question, but... [puts on flame-retardant pajamas] could I attach a linear amp to this? Or, failing that, just modify it? Anything can be modified, so I'd rather be flamed than told it can't be done.

There are probably technical limitations as to why that handheld is limited to that power output (battery consumption, electronic components, etc.). Some more expensive handhelds can be easily tuned up to give better performance, but most inexpensive handhelds cannot.

Sadly, since so few repair shops handle handhelds on a regular basis, very few CB repair shops would have the technical skills to tune a handheld (especially an inexpensive one that would often require component replacement).

Yes, you could use a linear with a handheld. However, I'm saying this rhetorically since it would be very foolish to do this - both because it is illegal and because it does not make sense financially. I would recommend that you buy a better radio instead, which would cost about the same as a linear. You would get more capabilities and would still be operating legally.

Note that all of this may be even more so with a newer CB handheld. Because of FCC threats, Radio Shack (like many other companies) has been modifying its equipment over the last few years to make it more difficult to modify. Therefore, any modification to your handheld may be rather expensive.

Hi All,

Need info regarding shield for '99 Pete Conv. computer. Have 225 watt linear (maybe larger in future), attached to Ranger 66 (55 watt) and Wilson SW2000 ant's. Where can I buy the shield, what is the cost, and how is it installed? Love my truck, not the cost of replacing the computer. Wish I had my A-model back.

Also, in dire need of outlaw CB technician near St. Cloud Mn.

If you don't find someone locally, I can make the repairs for you. You may email me for my rates as I don't have my Web Site up yet.

Your unit will be repaired and aligned to factory specs or better. Tuned circuits will be sweep aligned for better performance.

Regards, Mitch

>Sir, you had best be carefull. Here in the states a lot of people call
>Tandy etal the "Rat Shack" ["You have questions and we haven't got a
>clue(SM)]. You could be mistaken for their offical spokesperson or
>elaned on by their powerfull legue of lawyers to change your screen
>name. Either would be a horrible fate to happen to a decent bloke!
>

Thanks for the warning - but I doubt their lawyers would have that much
luck this side of the water, they would have a *very* difficult time
proving I am posing as anything to do with Tandy corp [apart from
owning a couple of Taiwanese/Chinese radios that they re-sell as their
own kit]. they would have to trademark "Rat shack" first, surely? :)
FYI I use the screen name as like these radios, I too have ancestors in
China, and I was born in the Chinese year of the Rat...

Incidentally ISTR that the shops here are called "Tandy" as when they
first started selling stuff in Britain back in the 1970s there was
already a ham radio shop in existence called "The Radio Shack" which
took *Tandy* to court, and won!

[We too call Tandy Rat Shack, sometimes as they have started promoting
the Radio Shack brand more these days, I think the British ham store may
have gone out of business now :(]

Snip

****
Begin quoted material from: http://www.omega.com/techref/fluoro.html

Nonpolarity:The carbon backbone of the linear polymer is completely sheathed by the electron cloud of fluorine atoms, much like a wire core is protected by insulation coating. This ensheathment, and the angles at which the carbon-fluorine bonds are disposed, causes the centers of electronegativity and electropositivity to be perfectly balanced across the polymer chain cross section. As a result, no net charge difference prevails. This nonpolarity of the polymer is partly responsible for its lack of chemical reactivity.

End of quoted material
****
The quoted paragraph makes no mention of aluminic atoms. In every other respect it is identical.

If the US patent website includes aluminic atoms then i apologize for the inference. The only way to clear this up is to post the URL.

> Again the burden of proof is on you not us.

No, the burden of proof is on whoever really cares.................. You've taken a posting that was designed to give a response (i.e.. a personal opinion) to another persons question (which wasn't my original idea to begin with) and attempted to transform the discussion into some sort of physical science debate for the ages. The sole intent of which, judging the type of dialogue taken by you and Mr. Hightower, was clearly an attempt to openly challenge what I may have "personally" stated. It seems your goal of this debate is obviously one of attempted discreditation as compared to seeking legitimate knowledge. This is clearly evidenced by re-reading most of the postings, and clearly interpreting the dialogue. I personally don't have to prove or disprove anything because I really don't care. Take the information for what's its worth. If you want to spend most of your efforts in a personality debate feel free to do so, however keep in mind that this is pure entertainment for me. I take this NG information for what I cost me to read it.

PS: I noticed you and Hightower haven't challenged the guy who agreed with my position. What's the matter, hasn't he pissed you off yet like Ive pissed many people off on this NG? Zero invested, zero return.............

But the QRP type are filling the nitch you're talking about.  Both
operation and technically.  You can start buy building a kit (for
Morse code) for $100 or less.

SSB kits are available for $250 - $500.

<snip>
> if you turn
>around and look, most HAMs are leaving the Amatuer Radio world and coming

I don't run CB (Never have tried).  But I do find 10M interesting and
get a lot of Ideas from CB'rs here on this group.

Any hobby depends more on what you decide to do than anything else.

And if everyone were as open minded and reasonable as your explaination,
we wouldn't have these mudslinging contests. But it seem that people
like to stereotype, catergorize and judge groups of people, rather than
individuals.

> No, the burden of proof is on whoever really cares.................. You've taken a posting that was designed to give a response (i.e.. a personal opinion) to another persons question (which wasn't my original idea to begin with) and attempted to transform the discussion into some sort of physical science debate for the ages. The sole intent of which, judging the type of dialogue taken by you and Mr. Hightower, was clearly an attempt to openly challenge what I may have "personally" stated. It seems your goal of this debate is obviously one of attempted discreditation as compared to seeking legitimate knowledge. This is clearly evidenced by re-reading most of the postings, and clearly interpreting the dialogue. I personally don't have to prove or disprove anything because I really don't care. Take the information for what's its worth. If you want to spend most of your efforts in a personality debate feel free to do so, however keep in mind that this is pure entertainment for me. I take this NG information for what I cost me to read it.

My goal in "debunking" wild "CB Science", is to prevent people from wasting their time on hair brained, half-baked ideas that may sound good on the surface, but hold no truth when tested.

Many people ask for help in various facets of CB radio, and there is generally no shortage of people willing to help. Unfortunately, many of the ideas presented are pure nonsense, or could actually reduce performance or damage their equipment. Hell, we once told a guy (as a joke)that he could increase his range by improving his ground, by digging a hole and pouring rock salt into the hole (Salt conducts better than plain water, or so the theory was), and then driving a ground rod into it. He actually did it, and all he accomplished was killing an adjacent bush, and corroding the crap out of his ground rod. But the way the story was presented, it was very believable to any not really "in the know".

>
> PS: I noticed you and Hightower haven't challenged the guy who agreed with

> my position. What's the matter, hasn't he pissed you off yet like Ive pissed
> many people off on this NG? Zero invested, zero return..............

He's as off the rails as you are when it comes to this "teflon" theory.
I still have yet to see a reasonable explaination on how pure teflon has
conductive properties. Teflon is used as a dialectric in coaxial cable,
and connectors. How could something selected for it's immunity to RF be
effective at "blocking it" in a directional pattern?

> Although not "portable" in the sense that you can walk around with it, one
>favorite portable antenna of mine is the "coaxial dipole".

Yup...I built a coaxial dipole once several years ago when I lived in an apartment building and couldn't put up a proper antenna. The higher you can get these above ground, the better they'll work, but if you can't get 'em at least half a wavelength above ground, don't bother, your effective range will be very limited (as in, you'll be lucky if they hear you a mile or so away).

Note that the coaxial dipole for CB use works much better when strung vertically, as Steve mentioned, because:

1. If strung horizontally they tend to be very directional off the ends and not much performance parallel to the wire - or so it seemed with the one I had, anyway - and

2. The vast majority of CB antennas out there are vertical, by being cross-polarized you cost yourself 30dB right off the bat.

With those two caveats in mind, these make a great temporary installation at a campsite, the whole thing can fit in a grocery bag, and when you're ready to leave you just cut it down from the tree, roll it up, put it back in the bag, toss it in the back of the truck, and you're done with it...unless somebody used your bag to help get last night's campfire going, that is. :-)

73 and good DX'ing,
John D. Kasupski

I don't think I'd go that far as to call them worthless, any more than I would call either of my ham HTs worthless - both of those have BNC connectors for their antennas also.

I agree that too big/heavy an antenna on a BNC connector on an HT will cause problems with the internal connections tending to separate from the PC board inside the radio. However, if you need that big an antenna, you probably should be running a mobile rig on battery power with a proper emergency antenna instead of using an HT...or, use a proper emergency antenna and run coax to the BNC connector on the HT.

What I had in mind were other smaller, lightweight HT antennas suitable for portable use - i.e. carrying around - the one that comes with the AH-27F works well but there are others out there like it and not all antennas are equal, as we all know.

I have a Diamond RH770 for my ham HTs, it's a telescoping dualband whip that does get out a lot better than the supplied "duck" that comes with either radio, BUT because it is a telescoping whip and not flexible, I wouldn't want to do a lot of crawling through the briars with it. For use on a CB HT, the Cobra telescoping whip that Wildcat mentioned would probably be about the same as using the RH770 on my Yaesu FT-470 or Realistic HTX-202...and that was about what I was fishing for when I posted the original message for this thread...something to add a little bit of extra range to the HT when sitting out in the yard and away from the base rig inside the house, to let me know when someone's calling me on the radio. You know...throw the 90-degree BNC connector on the radio, throw the whip on the connector, set the radio on the table, set the squelch, and start the barbecue. If they're local and strong enough to break the squelch, I can probably get back to 'em.

Thanks to all who responded.

73 and good DX'ing,

That sounds familiar. :-)

However...just about everyone I've talked to who has used a G5RV has
used it as an inverted vee. Supposedly the G5RV can also be used as a
sloper. Any idea how well they work in this configuration?

That sure doesn't seem like what I here but 10M below 28.5 does have a
lot of new ops many fresh from 11M.
Each band has its own flavor and you sound like the type who might
enjoy 17M,that is probably my favorite band because of the good manners
and good fellowship.Thats what I like to here on the air,then I go blow
off steam on the newsgroups. :)

Cool. If you've never ran a CB before or probably never will, more power to you. Each to its own, right?

>>>But I do find 10M interesting and get a lot of Ideas from CB'rs here on this group.

Don't forget now that not only are these CBer's CBer's but HAMs also. Alot of the ideas generated here are kind of "half and half" (some CBer and some HAM innovative ideas). But I'm glad that a respectable HAM (like yourself) don't just jump right at a CBer's throat and try to "REGULATE" through constant flamming and comparison to "criminal" activities. Therefore, I respect you and the like.

>>>Any hobby depends more on what you decide to do than anything else.

Amen.

The Euro 39oo is the radio that I run. It is a pretty good little radio an as far as the mods. are simple. It has 5 bands in which goes from 25.something to 29.something, not sure of hand. If you want to know the exact the freqs. just ask me... But if you are going to buy it, I would suggest buying the frequency counter that goes with it. It has a standard roger beep. And the one major mod that will need to be done, is a jumper on the inside. It just has to be moved over one. There are only three pins. That will get you 11 meter. It can do FM, Upper, lower sideband, morse code, and of course AM.

Just an opinion and depends on your goals,when a couple hams were trying to sell me on the hobby they greatly exagerated the capabilities of the HTs and I wasted a few hundred $s.For my goals I do find HTs worthless.A lot of people get a lot of mileage out of them but I sure get tired of the "repeater babies"who always have a broken up signal or a dead batt and don't even know what Simplex is.

Its a nice dream but CB has never been that organized and never will be.My station is always ready for "off the grid" use and most ham HF stations are.Hams practice preparedness on the air via nets every night.

I didn't pull any thing off. Go to Altavista. Search for "Teflon
Fluorocarbon Resin"

Then click on number six. It should be:
http://mother.lub.lu.se/ae/bydomain/067501-067550.html
 Then use your browsers 'find in page" function and find the
second "teflon"in the page. Click on it and that will take you to:

 http://www.omega.com/techref/fluoro.html

No aluminum is mentioned. If you have the US patent URL,
that stated aluminum, then post the URL here.

> I was wondering if anyone knows if this modulator will work on side band

     It'll work to a degree.  The modulators are Class C
     (unbiased) amps.  Without bias there will be some
     audible distortion on the output signal.  In other
     words, the signal will be useable but will have a
     crunchy sound to it.

> and how many watts it puts out?

     In the 100 peak (PEP) range depending on DC supply
     voltage and drive level.

You apparently missed part of what I wrote. Understandable
considering my typing left much to be desired as I was on the verge of

falling asleep. The part I'm refering to is "from what I've heard".
That means I'm speaking from experience with the portion of the 10
meter community I've been able to hear. I've also listened in on some
other bands in my area on my scanner and they're much the same in this
area. Considering the type of people it appears I'd be associating
myself with if I were to go ham, why would I want to? Perhaps central
Alabama has a higher than average percentage of a-holes on the ham
bands? I don't know. Whatever the reason, if I were to go ham I'd
not enjoy it here because there's nothing I dislike more than a-holes.
Sure, there are a-holes on CB also. The good thing is that on CB, if
we have an agitator trying to cause trouble, we can usually bump it
down and keep right on talking with little risk of haivng other CBers
getting together and "self policing" us to the FCC.

It's probably because he doesn't know which "50 cent part"
it is. He probably also doesn't know how to go about
finding and changing the bad (assumed to be) 50 cent part.
In short, he's trying to minimize the fact that the amp

```
     isn't 100% operational.  He should have just said that the
     pre-amp doesn't work and leave it at that.

Most reputable manufacturers design their antennas to withstand an 85 MPH
constant wind.  I would think that the A99 could withstand such a wind
without damage to the antenna.  BUT be sure that the mounting hardware and
the structure to which it is attached can withstand such stress.  I've seen
antennas withstand very high winds only to be destroyed when the tower or
mast failed, sending the antenna flying into nearby trees or crashing to the
ground.

I'll second that!

But I will say that there are probably just as many CBers who participate in
those emergency drills now as did back in the 70's when I was in CB as well.
Problem is that there are millions of idiots who ruin it for the rest of us.
No I'm not saying that ham radio doesn't have its share of idiots too, it
does.

>
>
They work just fine, John. but they tend to be somewhat directional because they are firing the pattern off only one end of the wire... as opposed to the vee being omni-directional by firing a dual pattern off both ends of the vee. (the pattern sorta looks like a big doughnut wrapped around the wire). If you are going to use a sloper, then consider using a long wire and slope it. I have a friend who used about 300 feet for his. Best of luck with yours.

>But I strongly disagree with your assertions that any ham (or cber)
>who expresses an opinion against illegal operation should be instantly
>branded
>as some kind of Barney Fife fascist.

i'm sure that i probably haven't made my position perfectly clear over the past
few months as i too have goten caught up in the battle of the flame throwers.
i don't agree, in principle, with things like megawatt shoot outs on the "legal
40" but i do respect their right, (in my opinion), to practice their hobby and
their attempts to confine their activities to one channel where ever possible.
my personal position on the subject of "illegal" operations concerns the
un-used out-bands.
these channels go largely unused and with reasonable power under 300 watts, one
can work the world.
i would support a licensed, NO CODE piece of this band width with associated
tech testing and reasonable limitations on it's use.
i know about the itu treaties and all that but some portions of this is as
outdated as morse code, (another arguement for another time).
what i object to is the "rf police" comming here like the hand of GOD and
shoving their views down our throats. if they would come here and act like a
guideing "elmer", they may not change a lot of minds but they would garner a
lot more respect for their views.

>Correct me if I'm wrong, but you are a vocal supporter of illegal CB
>operation,

>is that not right?

partly right. addressed above.

>Of course, you are free to express these ideas in an
>internet newsgroup forum.

most "rf police don't share this view.

>But be aware, it's as if you are walking around in
>public wearing a sign that says "I'M A CB OUTLAW AND PROUD OF IT".

to some extent, this is true.

>Yet you seem
>shocked, surprised, and angry when anyone notices you - and disagrees with
>your
>stance.

not shocked or suprised but yes, angry at the delivery style of their message.

>Perhaps you assume that 100% of the population shares exactly the same
>beliefs as you do.

not true. the only fire that my opinions draw is from the "rf police" types.
i have not heard one byte of arguement from anyone who enjoys their hobby in
ways that happen to coincide with my interests. only the people, (mostly hams),
who disagree.
in other words, it seems that 100% of the people on my side of the fence either
agree with me or don't voice a differing opinion against me just as no one from
your side of the fence has criticized you for your opinions which differ from
mine. so it seems, from your point of view, 100% of the people who share your
views agree with you.

>So perhaps a bit of tolerance is in order on *your* part.

when i first came here 6 or 7 months ago, i read the posts and offered help and
the benefit of my experence. i'm not a know-it-all and have made technical
mistakes and was grateful for helpful corrections. when i started reading the
smoke signals which, eventually, turned into a fire storm from the "rf police"
types, it was THEIR intolerance that made me light a few fires of my own.
if they had come here and expressed their opinions like you have here open for
civil debate, there would have been just that from me, a CIVIL debate. instead,
i and others either got personal attacks or, at minimum, a lot of finger
pointing and inuendos which resembled personal attacks. example; " only a shit
head would do such 'n such", knowing full well the guy that they were
addressing was doing said activities. if you try to push a mule, you usually
get kicked, which is just what they got. if they tried to lead that mule, they
may not have gotten anywhere but at least they wouldn't have gotten kicked.

>many hams come into the
>newsgroup to post responses to such inflammatory threads like "Hams Suck",
>"Ham

>vs CB", and "Why I Am Not A Ham". Inevitably, these kind of threads
>degenerate
>into petty squabbling, name-calling, threats, and counter-threats.

i too have responded to these posts but i think you know that none of these
have originated from me.
as a "warrior" in the battles here, i knew when i got into it that i was going
to take some hits too. i know i'm not bullet proof.
i respect the hams right to shoot back when shot at just as i reserve the right
to shoot back too. it wasn't the cb'ers that started the shooting.

> I think
>it's unfair to tag people (hams or otherwise) who get sucked into these dumb
>flame wars as elitist, intolerant, inflexable "rf police wannabees

the difference between a ham who doesn't agree with "illegal" cb ops and a ham
rf police wannabe is the disagreeable ham will express his opinion in a neutral
style and debate the issues on their merits without resorting to personal
attacks or intentionally misleading information.

>Your point that 27 MHz should be of no concern to hams is well taken

not altogether true either. i have to admit the "legal 40" can be a concern to
hams as they have the right to use them too.
i also have to admit that, in the past, i strayed into the rediculeus about
hams having no rights to cb but it was more to get a point across than to deny
their right to be there.
the point, at the time, was that if ham was as high and mighty and cb was as
low and sewer-like as they were comming across, why wern't they there where the
"air is clean" instead of down here in the stench with us. it was like they
were excercising their right to be on cb just so they could bitch about us. if
it wern't for us, they would ignore cb compleatly.
for the matter of the out-bands, if they were the rule abiding citizens that
they purport to be, they wouldn't be on the out-bands to begin with and should
not have any concern for us being there assuming that we didn't stray into 10
meters. but they were bitching about that too, again, just for the sake of
bitching even though those frequencys didn't concern them at all.

>But the
>sad fact is that CBers don't live in a vacuum. Unfortunately, what happens
>on
>CB reflects on ham radio, as the two often are confused in the public eye.

unfortunately, this is not our fault. we don't have a national orginization
working for us that could maybe start an educational campaign to show the
public that there are differences between the two services.

>IMO, everyone has a legitimate right to disagree with people who encourage
>splatterbox amps or any other practices that give all "radio hobbyists" a bad
>name, whether it's in this newsgroup or any other.
>
this is VERY true. in my opinion, those rights start hitting a rocky road when
the insults, personal attacks, inuendos and intentional mis-information flood

gates open up.
in the past, i had been attacked as the bad guy when the fact was that i wouldn't lay down and take a whuppin' from the rf police for returning an attack to them in kind for the ones that they threw at me.
there were times during that war that i had neutral debates with other hams who disagreed with my views and the posts back and forth were civil because they didn't immediatly go on the offensive or try to blind side me. they came up to me eye to eye and said i think your wrong because ...
this made it a lot easier to communicate without gunfire. we still don't agree but at least we parted ways with all of our blood, pride and self respect intact.

you and i have crossed flame throwers a lot in the past and probably still don't agree on the basic premise of this discusion but i have to admit, i have enjoyed this debate more than all of the rock throwing that took place between us in the past for which i thank you.
have a good night.
jeff

>The existence of a daily updated FCC internet database
>pretty much allows any existing, newly licensed or
>newly upgraded ham be to positively ID'd within minutes

my point exactly. if hams used their names and addresses, they would be id'd immediatly.
back in the days of smokey and the bandit, the mind set was different as most of the handle users probably didn't have a license in the first place. it was a game back then that injected a certain amount of mystery into the mix.
there were also those who made some enemies who couldn't afford to give away their identity for their own safety.
i'm sure there are a few ham agrivators out there who won't id for fear reprisal from there victims or the fcc and a few with big chests who do as a dare to "come and get me" so yes i have to agree, it must be the mind set.

I don't think you want the saved emails posted as it would really make your postings about the maker look bad. Softball was more important to the maker and by the way. Its always been a problem if it were a palomar, tx series, messenger, galaxy, or whatever as davemade thinks they are the only ones in the Industry. We will be in Memphis if you would like to sit at the round table of discussion.

>Well, there are a few different ways of looking at it. It's plainly
>obvious, what the main market is for "export" style "10 meter radios".
>If these radios were made more like the HR-2600, with useful ham

>features, but useless for Cbers, then the rig would not be a target (It
>would also not be very popular with the CB crowd either)

i fully agree. what i was getting at is the way the rules are written in their
present form and the narrow way the laws on discrimination are interpreted,
this minute, these fcc actions could be easily be sucessfully challenged in
court.

>Icom, Kenwood
>and Yaesu radios, on the other hand, are not in high demand by Cbers,
>simply because they are expensive, and have features that are wasted for
>the typical "good buddy". The ham market for "real" HF rigs is strong on
>its own, so they need not fear any repercussions in sales due to any new
>technical regulations.

as i said before, the rules, in their present form, could be used to force the
icoms and yaesus into change with a me too, black and white arguement in court.
all that needs to be said is, "the big boys can do it, why can't i?" end of
arguement.
with the high awareness of discrimination and anti-trust monopolies, this would
be an open and shut case in favor of galaxy against the big players in this
game unless the fcc changes, as you say, it's tech specs.

>This is also a marketing game. The manufacturers of these "export" type
>radios know full well where their main cashflow comes from. They aren't
>selling to hams. So they try to accomodate the features that facilitate
>easy CB operation. They walk a fine, thinly veiled line, when they call
>their products "10 meter ham rigs", but have 40 channel dials, roger
>beeps, echos

this is also very true but all they would have to argue, assuming that the
radios meet spectral pureity standards, is production line economy.
the radios, out of the box, transmit on legal ham bands for use by licensed
hams. the non-functional "options" are cheaper to install and run on one
production line than having to re-tool and run a different style of radio just
for U.S. use only and having a small crew to make those "options" operational
for the export market.
it's actually cheaper, labor cost wise, to put in parts that, bought in bulk
for pennies, and make them non-functional than to stop change things around and
restart a production line again. time is money.
this is why when you look in several different models of the same brands of
radio, the boards are identical. it's just a matter of wether that model had
the optional swr meter, anl / nb or other options.
a prime example was the old PLL02A cybernet boards. a lot of them had all of
the parts for the anl / nb but wern't connected in some because they were going
into a cheaper box. if you knew the circuitry, you could buy a cheap model and,
with a couple cheap switches, have a top of the line model.
actually, it's easier to modify a yaesu 747 than it is most exports. just flip
a switch and you're on the road in seconds. how does yaesu justify this?

>a band switch
>that is obviously meant for something, but is not fully functional out
>of box.

you, i and the judge know this but you would have to prove intent which, for lack of a paper trail or a conspiracy, could easily be denied.

>The FCC will most likely amend the rules as they did when they toughened
>the rules for HF amplifiers. They will spell out specific rules, and
>conditions that must be met in order to be sold as "10 meter ham radios"

this is their only recourse but, then again, how hard would it be to put in an 80 channel channel switch and cut in half the number of positions in the band switch?

 The FCC will eventually win the
>battle of rulemaking. Any company then trying to market "export only"
>radios will have to play the contraband game if they want to sneak them
>into the US. Many will succeed, some will fail, and may be slammed big
>time. Time will tell...... The government can't stop illegal drugs, so
>if the CB market is big enough to justify the risk, people will still
>sell illegal radios, but they will become more scarce, and more
>expensive as a result.
>

this is what it's going to have to come to if it comes up in front of a truely justice is blind judge. if not, i'm sure they will keep looking untill they find one.

if they can make dedicated chips for scanners which internally lock out cell
freqs, they can do it for 11 meters for ham radios. they would be able to do
the same mars / cap mods and the chip would automatically skip over cb.

>CB is *MY* band as well. The fact that I also hold an amateur license is
>irrelevant to these discussions. When I speak about the CB band it is as
>a CBer. I and many like minded CBERS, are sick and tired of those who
>hold the rights of others in contempt, plain and simple.

this is very true. the point here is more symbolic than literal and i'm sure
that i didn't make my position as clear as i could have.
my point is the "rf police" types have come in here with an air of percieved
authority as though they have the right to shove their views down everyones
throat rather than airing their complaints in an open forum for public debate.
i'm not the one deflecting the arguement into a cb vs ham thing. those lines
were drawn long ago by the hams.
the general impression that comes across here a lot of times is that the "rf
police" types believe that they were issued a badge with their ticket and can
patrol the entire radio spectrum.
the hams keep pushing the line that if you want to shoot skip and run power,
get your ticket.
it seems that if there were no problems on cb, the hams would ignore cb
completly and the only reason that they own a cb is it gives them a license to
bitch about us.
if ham is the pie in the sky that they purport it to be, why do you even bother
with something as rinky dink as cb when you have hundreds of megahertz of
spectrum assigned to you that goes mostly unused?
in the case of the out-bands, if the hams arn't suposed to go there and
assuming that we don't stray into 10 meters, our activities there shouldn't
concern you at all.
i never seriously denied a hams right to be on cb but if you hold this band in
such contempt, why do you even bother with it anyway???
with all of the purported benefits of ham, cb must look like the old 100mw toy

walkie / talkies of days gone by.

 This is not the case.
>It's is more a "clean, decent, law abiding, respectful vs. selfish,
>arrogant, scofflaw".

the "rf police" always come back to the "scofflaw" arguement. they always pull this one out of the hat wether they are into cb or not, again, just for the sake of having something to bitch about.
if you see someone on the street beating someone with a baseball bat, by all means jump in and stop it. with all the bitching that the "rf police do here, it's akin to turning in everyone who drops a gum wrapper or j-walks across a deserted country road at 12:00 am. but doing it with much vigor.

>Like it or not, there will be times in your life where you will have to
>deal with people who DO have authority over you. You have a choice, to
>either grin and bear it, or suffer the consequences. If the thought of
>working for a "dork" botheres you so much that you would quit an
>otherwise good paying job, then YOU can live in a substandard lifestyle.
>
>True story. Back in 1975, there were a group of us tennagers, who all
>thought that our Sh*t didn't stink, and we ran on Channel 10 (right
>after the truckers moved off). We thought that we "owned" the channel,
>and regularly gave a hard time to any "squatter" that happened by. One
>of the people that used to insist on doing battle with us, was an old
>guy, who was trying to contact his base after work. One day the guy said
>to us "keep it up, sooner or later you'll all have to see me, and then
>we'll talk". We laughed at him, at his "idle" threat.
>
>But we soon found out what he meant. Seems that this guy was the chief
>examiner at the drivers license center. He took the time to find out who
>most of us were (It didn't take much considering all the clues we gave
>out in our conversations), and when it was time to take the driver's
>test, it was payback time. Many of our group had to retest several times
>(I had to test 3 times).
>
>So just remember, what goes around, comes around.......
>
interesting story but assuming that you and your friends demonstrated the skills to pass your driving tests on the first try, this was a clear case of abuse of power by a public official for which there should have been a complaint filed and he should have been fired on the spot as his actions were driven by a personal grudge and not an official function of his job.
what if he made a lot of broad assumptions about who was causing him problems and some innocent kids were unfairly failed just because he assumed they were involved in your actions?
you and your friends shouldn't have layed down and allowed your selves to be steam rolled this way just as i / we won't lay down and be steam rolled by a bunch of high horse riding, holier than thou, hams who think they have a license to control other people.
your authority over illegal radio operations is restricted to the same procedures as any other citizen who has an interference problem.

you have the right to inform the fcc of your concerns and assist them in any way that you choose. THAT IS ALL.
now on the other hand, if you were to approach me / us and get off your high horse and look me in the eye, man to man and express your opinions, we could discuss them on a level playing field.
you may not change my mind but you would garner a hell of a lot more respect from me for your views.
comming here and slamming things down peoples throats only causes sudden deafness and accomplishes nothing.
have a good night.
jeff

   > I have been into CBing for
>25+ years. One thing I could NEVER understand, is why a person would go out
>and buy a "big' radio, and a "big" linear and then ONLY use it on channel 6
>(27.025) A friend of mine ran a Yaesu FT-101EE into a Yaesu FB-2100 amp
>SOLELY on channel 6.

Its a National call channel except you don't have to leave. It also is the local channel all over the US when DX is not present. I've often discribed channel 6 as the backbone of a highly competitive and ego driven hobby.

>And I've heard about the 70,000 watt 'SUPERBOWL'
>mobiles. But WHY??? What's up with a "Shoot-out."

Although its done from time to time it is not the norm to see 70k from a mobile on the bowl. These are more frequent at the Shoot-outs. Shoot-outs are contests plain and simple. Whomever can be heard and understood on the tape is the winner.

>A person COULD run only
>100 watts on a sideband frequency of 27.355-27.405 and work THE WORLD !!!
>(providing of course, it was legal.) So... BIG radios or not, Europe is
>just a 'key-up' away... on sideband.

This is true. I once was dialing-in a new antenna system on my mobile and asked
these two men where they were. They said 40 and 50 kilometers south of
Buckingham Palace. The barefoot radio wasn't even doing 12 watts pep.

>And if you are ONLY running ONE channel
>(ch. 6) go to Radio Shack and get a ONE-CHANNEL radio. Surely it MUST be
>cheaper than a new 2990. FLAME ON !!

I wouldn't know. I don't shop there. I use the electrical supply houses in my
area.

You can improve the AM reception on your Lincoln by replacing Q101 with a
low noise transistor, such as a 2sc2999 or equivalent and then realign your
rig!

Hello Phil: I called Marv, nice and friendly guy to talk to. He told me the tower had to be lowered, to be removed. And said the tower could be easily lowered and loaded on to a trailer.

But Ipo Mr. 137 had nerve enough to call me and ask if he could have it. I told him to go for it, but whenever he gets rid of it I am first on the list. I have to many irons in the fire now, to run down to LA and get the tower. This way the tower will be picked up in time (Ipo being a menace to the general good of all, will pick up the tower, post haste) and I won't have to break off from all the how-raw that I am into.

I tried to e-mail Ipo three times, but after I removed the "nospam" it didn't come back. So I think it got through.

The Penetrator 500 antenna update. Right now I am working on expanding the usable band width of the 5/8 ground plane antenna. Ok now I remember, the updates where installing eye-bolts in the ground radial bracket, to allow none metallic guy wires to be attached, resulting in a much lower mechanical stress being placed on the top mast. I know how windy it can be in Jolly old England, I believe that the fierce winds there would whistle as they passed between my ears.

IPO did you get my e-mail?

Jay in the Mojave

I have a dusk to Dawn light mounted on my tower about 15 feet below a 6 element beam. I am wondering if the 250 watts could make the bulb go bad. The light is the mercury vapor type and I had to replace the bulb after 8 weeks of it being mounted??? any ideas???

Low paying jobs may be the only jobs left one day. And you won't get
any disagreement out of me when it comes to companies moving overseas.
Lets not forget the effects of massive immigration. Too bad those in DC
cannot see all that, just don't care enough to see, or see and don't care.

I never said that the FCC has control over him. I just said that the FCC is having an effect on Radio Shack's products. And, if I remember correctly, using a linear would also be illegal over there. Therefore, the rest of you message simply does not apply, or is inaccurate.

Furthermore, I don't see what your complaint is about. I felt that I answered his question honestly and openly. Perhaps you disagree with the fact that I mentioned that using a linear is illegal, but that was honest.

The only thinng Hollingsworth will do is
continue to spend the taxpayers' money traveling
to ham fests around the country, spewing more
of his lies & bullshit to gullible ham radio operators
who believe Hollingsworth's bullshit & lies.

Where did you find this information about the Coast Guard? I was under the impression that all USCG group operations centers had radio facilities with HF capability. The same with district-level emergency command centers. And the same with the larger vessels.

Not according to the articles I've read. For example, Popular Communications (Nov) stated that the FCC was responding to complaints from amateur radio operators in the area and that the amateur radio operators supplied audiotapes, with the results of RDF and close-in monitoring, as evidence.

The article stated that FCC agents traveled to the area and observed Floppo's communications on the CB band, not on the Ham bands. However, the FCC decided to issue a warning notice anyway based on the evidence they had.

It further stated that an FCC agent returned to the area to investigate renewed complaints, and the agent "used direction-finding techniques" to determine that Flippo's residence was the source.

The agent then, with the assistance of the Palm Beach Sheriff's Department, attempted to inspect Flippo's radio station. Flippo refused to allow the inspection and a "Notice of Apparent Liability for Forfeiture" was issued a few days later.

You can read the article yourself. Its in the November issue of Popular Communications Magazine (page 66/67), available at most bookstores.

So you're saying that all those reports of unlicensed operators being "busted" are totally false? All the various publications are lying and just making up the stories?

If you think Hollingsworth is such a joke, why don't you write to him with your comments? And use your real name when you write - you hide behind your handle and spout things that you would not have the guts to say if your identity was known. And please make sure to tell him about your "World Wide DX" activities while you're at it?

I'm not a huge fan of Hollingsworth either, and I've even criticized him in the past for some of the statements he has made concerning free speech (using my real name). But I have no complaints about the enforcement actions he has taken so far, especially when it comes to unlicensed operators.

Everything is a pretty broad spectrum. List the items you want your base station to do. Then we can probably give you some insight.

The 10 meter radio that you are talking about does a lot. But it can also carry a hefty price tag.

Good luck in your search.

Steve, please feel free to post any e-mails that say you didnt get an
amp because someone was playing softball. You ordered 3 amps total and took
your time paying for them after repeated calls to you looking for payment.
I have emails too. Never ever heard anyone affiliated with davemade say
they were the only one in Industry. You pushed the x force amp which has
been proven in many calls to you and used davemade so they wanted nothing to
do with you why do you think you were last inline?. Get over it

> Why? Why can't the ITU and the FCC change the regulations for 11 meters?

Neither has ever and will ever be in favor of having world wide bands used by people unwilling to learn a few simple rules and principles as well as operating procedures.

> I hear is just nationwide for the most part. Some of the SSB DXing are
> International but GEEZ!

Many countries don't share our CB band and many DX stations on CB don't speak english like most do on the ham bands.You may also want a better antenna.

Hell, some people might not want to go to 10 meter
> and work DX's. Some might just want to stay 11 meters.

Why?More priveliges ,modes,power and space,and you can still break the rules if thats what your into its just a little harder.

You should only use the minimum power necessary. 200 peak watts is plenty. Most amateurs on 10 meters only use 100 or so. If everyone kept the power down I wouldn't have to hear such things as "this is the CB Shop, exit 108 what do you need?" He's in Oklahoma, I'm in NEW YORK!!!! This guy is on 23 all day long running more than 200 watts!!!! Oh and don't forget the ebonics boys on 6 and the deliverance buddies on 26.

I just bought one myself thinking it was as good as my TRC-485. Nothing inside these two radios are the same, not even the LCD display!!! The Sidewinders S meter goes from 5 to 9, NO 7. The Korean made Radio Shack is much "cleaner" inside with high quality workmanship while the Philippine made Sidewinder looks as if it was thrown together with spare parts. Theres mounds of solder on the chassis grounds as well as file marks and the powercord is held in the radio with a big glob of glue. The Sidewinders performance isn't up to par with the TRC-485 either. The receiver sucks, the noise blanker isn't as effective as the 485's, and the audio isn't as punchy. The Eagle is crap and will be auctioned off. Thats just my opinion on the Sidewinder. I may be wrong........

There's your problem son, as well as some of those guys that just don't seem to understand that an "electrical ground" and an "RF ground" are two totally different things. Just how much "PROPER" RF grounding can you really expect to get in a car or truck anyway at 26 to 28 Mhz?

And just in case you really want to know, you can put as many GROUND RODS in the earth as you want and you still have not addressed the problem of having a poor RF ground.

When I used to help out some of the local trash spewers, OVER HALF of them were cured with a good RF ground in their frequency spectrum. The other stuff was poor coax connections, no isolation from house wiring, ground loops by the ton. And on & on & on.

Now that the TV & phone makers have stopped adding good front end protection on their products in order to get the prices down, it has left it wide open for stations like I described above. And when it gets to the point of you "CBers" versus "the kids or family watching TV or using the phone" who do you really think is going to be the winner in the long run. You can spit out that rubbish about "they can't do this or they can't do that" but you are only fooling yourself there fella.

Oh by the way sonny, when old Riley or one of his boys come knocking at you door, you can beat your bottom dollar it won't be for anything you have typed in this newsgroup. But like any other good enforcement officer, they are always open to reports of illegal activity so they know where to start building a case.

And soon as a few high profile cases hit the news papers. all those neighbors that have had to endure RF splatter will be calling in just for you and people like you. Just like a 911 call, soon as someone reports you, that's all they need to enter the QTH and have a look. If you are legal and have good RF grounding, not to worry. If not, then better start hoping the judge hasn't had any experience with CB splatter at home. Oh yeaaaaa

Just a few tips in case you really want the low down.

(snipped & deleted)

          CB Florida Quarterly did their own researh
on the Flippo bust.   They found the FCC news
release, which the article you quote from, was
base on, was full on half-truths, exaggerations,
and outright lies.   Flippo teed off a couple of

you stupid arrogant hams because he had a
stronger signal & worked more DX, so the Hambos
decided to get even and begged the FCC to
get Flippo.

Hambos SUCK,   CB rules.

Hi Steve:

I was looking at these the other day on bills2way -- nice looking radios.
However, I too was curious as to their performance, especially since they
are so new.

Any info or details you can share from you tests.  I don't see anything
about these listed on your website.

Thanx,
Jay

Wow, if this is true it throws this self-policing thing out the window! If ARS operators don't respect Hollingsworth, their own rules and the oath that they took why should the average CBer?

Not one, REPEAT, not one single unlicensed station has been prosecuted by Happy Hollingsworth, bullshit artist extraordinary.

Any doubts? Tune into 14313 kHz or 3950 kHz. Jamming, name calling, swearing, all coming from unidentified stations, and Hollingsworth has yet to catch even ONE!

All Hollingsworth has REALLY done is go after a few IDENTIFIED high-profile hams, who were using call signs. He made examples of them, and the rest of his big enforcement campaign is bullshit and lies.

More facts: ALL FCC monitoring stations were closed in 1996. There are no more FCC monitoring stations. The so called automated monitoring network is a total failure. It never works, and Congress has refused to give the FCC any more funding for this failed project.

Hollingsworth junkets from hamfest to hamfest, squandering the tax payers' money and feeding BULLSHIT to ham operators who eat up the bullshit like babies eat candy.

My experience with those types of lights is that they will blow under
just about any circumstance. Your better off replacing the light with
a regular fixture that takes a couple of halogen par flood bulbs.
They make long life ones that will literally last for years.

Bill your rude, I am not trying to minimize shit. I am just saying thats what the problem is so if anyone want to fix it, thats all they have to do is replace it. I didn't even have to mention it, I could have just sold it AS-IS.

As far as my ability, I am not a tech as good as you per say, but good enough to fix that little problem if I really wanted too. Its simple, I just dont have the time. When I did have the time I modified the board to except the flange type finals. Now if you know this amp you know what kind of chore it is was to do that. Now as far as the pre-amp circuit is concerned it works a little like this:

The circuit consist of transistor, a couple of capacitors, and a couple of resistors. Its is a basic COMMON EMITTER amplifier!!! Bias for the amp is derived from its collector voltage through a resistor. A incoming signal is fed through a capacitor to the base of the transistor. That signal is amplified and appears as a larger voltage across the collector load resistor. The amplified signal is then coupled from the amplifier through the other capacitor. Thats is it in a nutshell.

I used to frequent this news group alot but I dont have the time I used to, and you Bill of ALL people used to help me technically with big linear problems and now you throw that comment at me? Ego is the end of all great men, dont let it happen to you.

KRS

Military Media is putting together a CD-ROM containing
Radio Manuals. So far we have the following
AN/PRC-70       AN/PRC-25
AN/PRC-90/2     AN/PRC-119
AN/PRC-47       AN/PRC-126
AN/GRC-213      RT 66,67,68
AN/PRC-104      AN/PRC-71
AN/PRC-68       AN/VRC-53
AN/PRC-41A      AN/VRC-12,43,44,46,47
AN/PRC-77       AN/GRA-71

If anyone has ideas about what other manuals to add to the CD,
please email me  Thanks

What about me? I run a cobra 2000 no extra channels, beldon 9914 coax, an Anton 99 ten feet off the ground, I have two 8' ground rods and run a stock mic and bleed for two blocks, even with mod limiter in place, does that make it my fault? I wish there were a law against trolls who ATTEMPT to anonymously post these troll threads, then maybe there bleedover would be considered illegal as well.

Military Media is putting together a CD-ROM containing
Radio Manuals. So far we have the following

```
AN/PRC-70       AN/PRC-25
AN/PRC-90/2     AN/PRC-119
AN/PRC-47       AN/PRC-126
AN/GRC-213      RT 66,67,68
AN/PRC-104      AN/PRC-71
AN/PRC-68       AN/VRC-53
AN/PRC-41A      AN/VRC-12,43,44,46,47
```

AN/PRC-77   AN/GRA-71

If anyone has ideas about what other manuals to add to the CD,
please email me Thanks

```

YOU ARE RIGHT YOU WOULD NEVER UNDERSTAND!
THIS QUESTION HAS BEEN ASKED MAYBE A THOUSAND TIMES AND IT HAS BEEN
ANSWERED A THOUSAND TIMES. IF YOU DONT UNDERSTAND COMPETITION THEN YOU
WOULDN'T UNDERSTAND CHANNEL 6 AKA SUPERBOWL! IT IS FOR THE BIG BOYS
ONLY AND FOR THE GUYS AND GALS THAT LIKE TO COMPETE INSTEAD OF JUST SAY

BREAKER BREAKER!

THAT'S STUPID! I AM WHITE AND I AM ON CHANNEL SIX AND YOU ARE STUPID IF
YOU THINK THERE AREN'T A GOOD MANY OF US WHITE BOYS ON CHANNEL SIX. WE
LIKE TO COMPETE TOO!
TAKE A POLL BUSTER AND THEN YOU WOULD UNDERSTAND IT'S A PEOPLE THING.
BECAUSE A GOOD MANY OF US GOOD OLE WHITE BOYS ARE ON THE SUPERBOWL TOO!
WHITE BOY OUT!!!

Not one, REPEAT, not one single unlicensed station has been prosecuted by Happy Hollingsworth, bullshit artist extraordinary.

Any doubts? Tune into 14313 khz or 3950 khz. Jamming, name calling, swearing, all coming from unidentified stations, and Hollingsworth has yet to catch even ONE!

All Hollingsworth has REALLY done is go after a few IDENTIFIED high-profile hams, who were using call signs. He made examples of them, and the rest of his big enforcement campaign is bullshit and lies.

More facts: ALL FCC monitoring stations were closed in 1996. There are no more FCC monitoring stations. The so called automated monitoring network is a total failure. It never works, and Congress has refused to give the FCC any more funding for this failed project.

Hollingsworth junkets from hamfest to hamfest, squandering the tax payers' money and feeding BULLSHIT to ham operators who eat up the bullshit like babies eat candy.

>>The problem was no customer service from the maker and we decided not to
>>pursue
>>selling the product line anymore due to this fact

From the maker?..As a distributor you should have enough expertise to make minor repair (The cost of which you would charge back to the manufacturer) as needed or have another box in stock to exchange for the customer untill you could send it back for repair/replacemant.The customer service starts in the store where it was purchased.(Just check with Best Buy,Circuit City,etc.) They don`t make you wait untill the manufacturer replaces the item they give you an exchange from their stock and deal with the hassle of returning it to the factory.Thats what customer service is

I hope I did`nt brain my damage.

I just got an Eagle Sidewinder 400 10 meter radio and i can not find the
modification for it for 11 meters. Eagle has changed the circuit in the
unit to make it harder to modify, so the channel mods that are all over
the internet are no longer effective. I am curious at this point if
Coppers modification tape on this radio has been updated to reflect
these circuit changes. So how  about it...anyone out there have one of
the newer Eagle Sidewinder 400 radio channel modification procedures ??
Let me know, i would really appreciate it. Thank You

I got on channel 6 again today. Had somebody call my name.
Didn't hear who they were or where they were from.
My 2 pill mobile just got down, again. Let me get my
little white butt outta' the way.

If anybody hears me, let me know.

       Hollingsworth is a lawyer-prosecutor NOT an
"enforcement consultant".    The FCC has no
"consultants" on its payroll.

> this is not to say that the FCC does not proceed against unlicensed
> stations. The web page at
>  Bureau detailing actions against unlicensed stations.
```

The "unlicensed stations" you refer to were LPFM stations NOT ham radio jammers. LPFM is easy pickings. The FCC mobile DF cars home right in on a signal is steadily on the air, UNLIKE a jammer's momentary transmissions.

>
> I think that William Flippo, the freebander in Jupiter, Florida who
> got socked with a $20,000 fine for unlicensed operation and other
> violations, might tend to disagree. :-)

Flippo was turned in by his neighbors. The FCC did no detection or locational work in the Fippo case. They just reacted to neighborhood reports.

> FCC maintains the same compliment of monitoring stations,

NO, they do not. ALL monitoring stations are closed, permanently. The closing is described on the FCC web page and other internet sites. The FCC's attempt to "remote" their monitoring stations failed. Congress then canceled all funding. The FCC has no more monitoring capability.

Read previous posting.   The FCC has not busted
even one unlicensed jammer or unlicensed station.
The only job Hollingsworthis doing well is squanderning
taxpayer money by running around to ham fests and
feeding his ego by feeding bullshit to ham radio
operators.

HEY guys,   don't you love it the way these
hambos have to come over to   rec.radio.cb
to bicker.   Hambos SUCK!   CB RULES!

I am guilty as charged.

I mistakenly believed i could reasonably argue the point
When that failed i believed i could possibly use there own
ammo against them and in the end i just became a troll my self

One person finds fault in another persons post then i go one step
lower then another person will go even lower.

Before you know it the hole base of the thread is lost.
Because they are people just as stubborn as I am.
```

I still like to read the news group once in a while.
I will just try to stop from being puled in to the mud slinging
mach again or starting one for that mater.

I will just post when i think it will help
or when something needs clarified

As people say the best way to know a troll it to be one.

And if you notice i have removed the s from 73 in 73 DE N9WOS

I originally put it there to indicate plural as in many best regards
and no i do not use it when i am making a cw contact
but it helps get the point across when viewed as text

As many people could probably tell i am not a good at arguing
My postings become disjointed and hard to understand.

I just thought that i could use the there ammo against them
(ie) name calling and other stuff
which i do not do very well.

I guess that makes me a troll
and a bad troll at that because i can't even insult
someone correctly.

Oow well i guess people live and learn.
even me!!!!!

And gosh darn it i am going to remove my
berth date from qrz i am dang tired of people
bringing up the fact that i am only 22 years old
heck i know people that are 77 years old that don't
know know to change a fluorescent light.

Like a dang teacher in IVTech i had the pleasure of listening to.

He for some reason thought that the positive swing on a am signal
when viewed with an oscilloscope was the upper side band
and the negative swing was the lower side band

He would say the single side band rigs were more efficient
because the diode detector only needed one side band to detect
the audio.

(ie) The diode detector only conducted when the voltage swung positive
so if you put all the audio in to the upper side band or positive swing
it would be more efficient.

Think about that for a bit.

Dun the best i could just to keep my mouth shut.

I have had one of those for a year...they are really good for what they are. Have talked over 8 miles with mine. They make a TRC 237 with a BNC antenna connecter that can have an BNC to PL259 adapter connected so that you can run coax off the unit into what ever you like, including a Linear. You would, since the 236 has a permanant 4 foot antenna, have to modify the unit to take the adapter so you can put coax or another antenna like an Antron A99 base station type on it. Possible...but kind of a pain in the ass.

I dont have the CB with me but it needs a 6 pin mic, cant seem to find one.
Want to use it for a pickup truck.  I will post the model later, plus does
anyone have a pin out for this I would appreciate it.  Thank you!

Listen Stone, I've got a deal for you. I have a vintage Packard Bell 386DX. It even has the optional 40 meg hard drive, and a slick CGA color monitor with a .52 inch dot pitch. It even comes with a 9 pin dot matrix printer. Not only do they not make the 386DX anymore, Packard Bell just announced this week they are quitting the pc market. How's that for a collectors item? I will start the bidding at $1000.

Why? Why can't the ITU and the FCC change the regulations for 11 meters? What is so hard to making an addendum to a simple piece of paper? I thought we live in an ever changing society and world ruled by Liberals and Tree-Naming Fanatics. Why stop? Keep it going. Heck, most of the AM DXing I hear is just nationwide for the most part. Some of the SSB DXing are International but GEEZ! Hell, some people might not want to go to 10 meter and work DX's. Some might just want to stay 11 meters.

>

Just an American thing. Austrailian DXer's are HAMs and they're pretty cool. Their QSL cards proved it so. Call them up every now and then to tell them what a good signal they're throwing our way and all. American HAMs? I don't know how you guys make so many contacts judging by all the wasted bandwidth on this newsgroup that comes from HAM postings. You guys suck! (just an opinion...)

>I find international hams (real DX) to be very warm and friendly. A

I agree. But why is it only a priviledge for Amateur operators to make long-distance QSL's? If Nova Scotia, Jamaica, South Africa, Marshall Islands and New Zealand skip is running, how could you stop and not contact them back (on 11 meter SSB even)?
Anyways, I too have found some cool friends on AM. I've hooked up with a couple of CBer's while visiting and had one hell of a time. It ain't no different in the HAM bands than on the CB.

>I think this "stuck up hams" stereotype has gotten inflated far beyond
>reality.
>

What would be your definition of reality, DAVE? Is it your infinitesimal attitude that all HAMs are and never will be as such..."stuck-up"?

>Reality is that hams are very friendly to people who act responsibly.
>When they "take an attitude" with someone, it's when the other person
>displays a lack of maturity, courtesy, or average intelligence.

Maybe I should be a HAM so I can become a person who is not human... but a GOD (wanna-be)!!!

>But you can't expect to get on the ham bands, and act like a CBer, and
>expect a warm reception and instant respect.
>
>Dave
>"Sandbagger"

I'd like to find that book that teaches me how to be a CBer. The last time

I spoke on the radio, I had a very interesting conversation with a friend of mine and all the rest of the CBers in town. It was almost like a forum and no one knew how a CBer acted. I guess they walk funny and eat different types of food because we came to the conclusion that there was no such person. Why? Because all the CBers in my town are HAM (except me and 3 other fellas). So tell me, how does a CBer act?

Hollingsworth is an enforcement consultant, not a prosecutor. However, this is not to say that the FCC does not proceed against unlicensed stations. The web page at
http://www.fcc.gov/cib/News_Releases/Welcome.html
lists numerous releases from the FCC's Compliance and Information Bureau detailing actions against unlicensed stations.

>All Hollingsworth has REALLY done is go

I think that William Flippo, the freebander in Jupiter, Florida who got socked with a $20,000 fine for unlicensed operation and other violations, might tend to disagree. :-)

>More facts: ALL FCC monitoring stations were
>closed in 1996.   There are no more FCC
>monitoring stations.

FCC maintains the same compliment of monitoring stations, however instead of each being individually staffed, they are now remoted from the Virginia station, and/or from the Washington, D.C. operations center. The Coast Guard has done the same thing with its communications stations, there is only one CommSta left on HF, that being CommSta Kodiak in Alaska. The rest of them are now remoted from either CAMSLANT or CAMSPAC. This is done to make more efficient use of available personnel. The Air Force is currently doing the same with its GHFS system, which will soon become the Scope Command system.

I'm not sure if you're just creating a CD full of user manuals for people that buy military surplus communications equipment, or if you're creating a CD that might be of interest to military communications monitoring enthusiasts as well. If the latter is the case, then how about the military's own field manuals that specify the doctrine under which military personnel operate this equipment?

For examples, here are some military field manuals to look at:

FM 24-11 (Tactical Satellite Communications)
FM 24-12 (Communications In A "Come-As-You-Are" War)
FM 24-18 (Tactical Single-Channel Radio Communications Techniques)
FM 24-19 (Radio Operators Handbook)
FM 24-33 (Communications Techniques: Electronic Counter-Measures)
FM 34-40-7 (Communications Jamming Handbook)

There are others out there as well...if you look around on the WWW you'll find that you can even download all of the above for free, from one place or another. This fact may not please some people who are in the business of military communications security (COMMSEC), but it is a fact nevertheless that such information is widely available.

From the reports on the FCC website, it looks as if Hollingsworth is doing his job and doing it well. That is, he is busting the illegal FM transmitters that operate in the FM broadcast band. The people who do this are warned several times to cease, and each time they ignore the FCC requests.

I really wish that people who do run really high power on 11-meters would please consider what they are doing and how it may do to hurt the hobby they most obviously love.

Well, first of all, congratulations, Mr. Chairman, and good luck to your new organization. Now, as to the duties of a club president, this is something that is usually spelled out in a club's by-laws, Dennis, so I assume your group is so new that your founding members haven't agreed on by-laws yet.

I've never been a club president, but I did serve as Vice President of a computer users' group for a couple of years, so I can offer a few insights into the operations of a club and the usual duties of its various officers.

One duty of a club's president is to preside over club meetings. (If you want to discourage members from attending meetings, watch the President Pro Tempore of the United States Senate on C-SPAN for an example of how NOT to preside over a meeting, HIHI). That applies to officers' meetings (executive board or whatever you choose to call it) as well as meetings of the general membership. Most clubs adopt some form of rules of protocol to govern how meetings are supposed to be conducted - often using something such as Roberts Rules Of Order, or other form of parliamentary procedure to accomplish this. The president then conducts meetings in accordance with that protocol. In larger groups, another officer (Sergeant At Arms) is often created to assist with this task.

As a radio club, you may wish to have an on-the-air net instead of or in addition to regular meetings - especially if the membership is geographically separated so as to make meetings problematic. In such a case, your group may wish to specify that the President serve as Net Control Station in lieu of presiding over the kind of meeting where everybody gets together in a public place.

In one club that I belonged to, another duty of the President was to perform a quarterly check-up on the club's financial standing. This is normally the regular job of the Treasurer but the club I belonged to was worried about the possibility of the Treasurer screwing up, so they made it the duty of the Prez to check up on him once in awhile.

A club president also serves as a spokesperson for a group. Should your club ever find itself in a situation where people want an official comment on something from the group, the president is usually the person they seek out to obtain such a comment from.

If your club has a newsletter, it's usually a good idea for you as president to write something for each newsletter, too. And, of course, once your club does agree on and adopt by-laws, or a charter or whatever you end up calling it, part of the duties of the president (and indeed of all other club officers as well) is to make sure that all of your group's activities conform to those by-laws.

Other than that...you usually have a Vice President whose duty is to assist the President in the above, fill in for the President when the president is unable to discharge the duties of his office, and usually is responsible also for the "program" of a meeting (arranging for special demonstrations, guest speakers, etc.). Also a Secretary/Treasurer to take care of correspondence, finances, and recording minutes of meetings - some larger groups will have a separate Secretary and Treasurer positions...or even a Recording Secretary and Corresponding Secretary in addition to a Treasurer. Your group will have to decide that based on your own needs as a club, but I'd advise you to make sure you have someone whose job it is to maintain good relations with other clubs, local authorities, the press, etc.

Finally...once you begin operations you will generally find your group may be creating various committees to deal with special situations and events that your club is involved with. For example, if your group offers refreshments during meetings, you generally have a Refreshment Committee that takes care of that. In most clubs, the President is considered an "ex officio" member of all standing committees. (The term "ex officio" is from Latin meaning "by [virtue of] his office") That doesn't mean you have to involve yourself deeply in the activities of the Refreshment Committee...but it may mean you might be called upon by that committee to provide guidance and thus you should be prepared to do so if called upon.

Other than the above...just do whatever you can to advance the good standing of your group in your community and to further its causes, and always bear in mind that whatever you do as president of your group will reflect on the public image of the entire group.

73 and good DX'ing,
John D. Kasupski

hey harry, your a fuckin weirdo, let's break this down for ya using cars.
ok? anybody can get a hold of a say 99 ford taurus. you following me so far
? but you don't see many 65 fastback mustangs, it's because it's vintage
harry , they don't make them anymore. kinda like those radio's you couldn't
figure out why they'd pay so much for.

Best Buy and Circuit City DON'T sell Dave Made! you dummy

Your reference to Circuit City, Best Buy, etc., makes no sense to this matter. If you can't supply your customers with a product because the mfr. takes 4-8 weeks or more to get it to you, why bother carrying the product? If you have that much trouble getting the new product, imagine trying to deal with warranty.
It's not just the dealer that needs to provide customer service, but the mfr. to the dealer too.

If you think for one second that thats what I was saying you are beyond a "Dummy"!!!
I was merely using them as example of how the seller of a product is the first step in customer service not the manufacturer!

I hope I did`nt brain my damage.

24 years ago, i had a stock 23 ch cb.
the model name was a marlin but i can't remember the off-brand maker.
in the subdivision where i used to live, before cable, the deed restrictions
dis-allowed ANY kind of outside antennas but they did provide a master antenna
at the club house that, for a one time fee of $20.00, you could hook in and get
the 4 local channels.
if i parked my mobile at the club house and keyed up on channels 1 through 12,
no one there watched tv untill i un-keyed.
stock mic and radio, no amp, trunk mount antenna.
wiped out 4 tv channels. front end overload into their distribution amps.
few people pissed me off back then. :):):)

the owners manual to my 99 dodge caravan says that it's not advisable to
install any high power amateur transmitters without first consulting dodge for
further instructions.
maybe call the maker of your vehicle and they can advise you on what to do.
good luck.

I would recommend you buy something used, but in good condition. This may be easier said than done as many CBers like to take their radios apart and fiddle with the innards. However, if you're lucky you can find one that hasn't been twiddled.

With this in mind, I would recommend a SSB radio over an AM only. SSB radios are far more versatile and have much greater range than AM. I personally like the President Washington base station. A good used one of these shouldn't set you back more than 100$.

J

Can someone explain to me how these "division" numbers work when DXing?

Also, what are the letters in between? For example: 14AT123 or 14SD123
I assume that 14 is the division, but what about the letters?

>I understand that many countries don't share our CB band. And I do
>understand that most DX stations don't speak English on CB, but what about
>the ones that do?

this statement is total bullshit. the people in far away places can speak english just like the hams can. this is just another myth the hams continue to make the hams seem better. the reason you hear so many different languages is because the dx is rolling and your hearing people in other countries local talking between them selfs. most times they could answer but choose not to since the majority of usa guys are ass holes asking for radio checks and breaks with echo mics, i dont answer them either.

It should be fine. That said, I had to pad the input to one of my amplifiers
even for 4W AM!

It's a pretty old (and cheap) think and I think the better amplifiers now
all will take 12W PEP in their stride.

>I assume that 14 is the division, but what about the letters?

the division number stands for what DXCC country the person your hearing is in.
the letters between the numbers is there club AT(alfa tango group) and SD
(sugar delta group) and there are more, the numbers after the letters are there
unit number in the group. now the three biggest groups are AT, SD, and IR.
you have to join one of these groups to have a number like you are talking
about but others just choose to make them up on there own. see here for the
division list http://home.t-online.de/home/IRDX.GERMANY/prefix~1.htm if you
would like to know more about a few really good groups follow the links in my
signature.

Competition? But wait a minute. If the typical super-modulated 5000 watt signal on 27.025 tears up 4 or 5 channels on either side of it, then it's really as if you are playing your car stereo loud enough to be heard a mile away, or racing your big V8 in a school zone, or building your big house partly on a neighbors property, or stocking every store in the shopping mall with nothing but beanie babies. Kind of inconsiderate, wouldn't you say? It's like forcing those who don't want to play your game to play it - whether they want to or not.

I've got nothing against competition. You know, NASCAR was started when 1920's bootleggers started getting together on weekends to race the souped up sedans they built to outrun the Feds during the week. These guys did the right thing and took the racing off the street and onto a closed track where it wouldn't bother other people.

Too bad you fellas can't get a little part of the spectrum set aside for legalized high power mobile competition. Like say up in the VHF/UHF range (where the effects on those who don't want to play would be minimized). I'd imagine there would have to be SOME limits and SOME regulations to insure that other UHF/VHF services were not effected. There might even be a license of some sort, maybe a qualifying test. But I'm sure that anyone who could put together one of these mobiles could easily pass that kind of test.

Of course the present-day FCC would blow a gasket
at such a proposal. However, if "the Bowl" and its ilk were
to remain a steady fixture on the CB scene, then perhaps
a few years down the line such a proposal might not be
such a radical idea anymore.

Now maybe I've got it all wrong and the SuperBowlers don't
want to be sanctioned and have a place of their own to play.
If so, then their "sport" is really more about selfishness
and immaturity than sportsmanlike competition.

I have a 35a supply that freaked out today. I had a radio that when hooked up
had a dead short, then the power supply laid over on 23v and won't come down.

Greetings!

Thanks tnom...

That radio was a bear!

Grizzly one at that!

The easiest fix was to Take T1 off on the MB3756, cutting the trace, and run the Regulator straight to the power switch thru the jumper that was removed on these radios, that still had the foil traces from their predecessor the Uniden made 148 GTL and the Grant XL. Go figure?

The rest of the mess dealt with a 10 ohm resistor labled L9 by Pin 9 of the MB3756. Voltage starvation, causing the RCI-MB8719 to never get a stable regulated voltage to the VCO-loop.

Change that to a ferrite bead, and pretty much brought the radio back to stability except in worse cases of audio overdrive.

Hope this helps...

Nah, there's something to be said for doing it yourself. Mind you, I wouldn't use a TRC47 as a starting point. That doesn't use the single-chip PLLs and can be a bitch if you trash something in the project. I don't know if you can easily divide down the operating frequency to get you into 10m SSB proper either. I would start with a TRC457 or 458 for this project. Getting it to work in 10m is a piece of cake. Mind you it is beyond the scope of my posting here and now, but if you have a clue I don't mind helpin' out.

I would start with the following....

- determine if you can get at the 10m SSB frequencies with the PLL circuit in the radio.
- if so, you will probably have to modify the VCO as it'll drop out of oscillation up there and will have to be tweaked.
- tune up the Tx. This should come up pretty easy.
- tune up the Rx, this might be a little difficult as the coils are intended for 11m. A little padding may be in order here - but not a lot. .

If this makes sense to you then you should be in good shape. FWIW, I'm told you can take a TRC449 and get it working on 6m, so 10m is doable.

MC 10kW is gone dattaway....

Greetings!

Yes, you've disconnected ALC and AMC.

With that in mind, you are now seeing what the radio can produce flat out with no other mods.

Now, as far as quality, that is another issue.

While Dancing with the Mouse on 7 Oct 1999 03:45:32 GMT, the Modem interrupted with an MNI from "rjchen@leland.Stanford.EDU (Robert Joshua Chen)", and the MotherBoard buffered this to Video RAM:

Greetings!

Easy, easy...

Although theres nothing wrong with expressing opinions...

There is a lot to be said about the radio owners responsiblity.

If the owner is happy with it, then so be it.

But, if the owner doesn't know, and gets into trouble, well - thats why theres such a big difference of opinion...IMHO.

I stand behind Jack, and support Bills' opinions. A lot of it has to deal with the "neighborhood" these people reside in.

They run the stuff the next guy has. If it means splatter, or echo, or fuzzy FM-ing audio, <chuckle> well - we know there are two sides to each fence.

I was in Bill's Shoes when it came down to nit-picky owners that wanted AAAUUUDDIIIOOOHHHH but stayed out of the TV. Sigh...some mods don't work like they're supposed to.

You can't please everyone, so just try to please people you can.

The return customers are the ones that like the work done...

While Dancing with the Mouse on Sun, 10 Oct 1999 01:38:03 -0700, the Modem interrupted with an MNI from "Jack Thurston <fire228@cybertrails.com>", and the MotherBoard buffered this to Video RAM:

---8< Snipped as to not be repeated >8-----

Jack, when you have a moment, I've found some mods that can easily be done to any radio with single line ALC/AMC detection.

I also found some other neat stuff you might be interested in.

Greetings!

As far as I know, the Midland 79-290 is the *only* AM/SSB radio with WX reception.

It's a dynamite little receiver, a little loose on rejection, and has been known to have a noisy ground-plane of a board in it [no power supply filter for ground loops on the radio like Unidens PC series].

If you are having good results with your current set-up, the Midland will give you a little more noise, but has those extra features you want.

How little is little in the noise catagory? Depends on you and your radio/antenna mounting scheme, and how you want to run the radios controls for acceptable results. You'll have to ride some controls more than others, RF-Gain for example, so something to think about.

While Dancing with the Mouse on Thu, 07 Oct 1999 02:03:01 -0400, the Modem interrupted with an MNI from "skorzy@SPAM_KILLER.mindspring.com (Dr. Skorzy MacFarlaighn)", and the MotherBoard buffered this to Video RAM:

Greetings!

Although clipping the CENTER lead of Q29 is going to work, why not
look at this page for help...

http://www.iserv.net/~codyspc/PC-122XL.htm

The radio you have, is based upon Unidens PB-122 derived chassis.

I've got some mods there that can help you versus having to disconnect
Q29, which although doesn't hurt, it doesn't help much either.

If you're concerned about audio, look at the pages first, then decide.

While Dancing with the Mouse on Sun, 10 Oct 1999 00:24:21 -0400 (EDT),
the Modem interrupted with an MNI from "thumper485@webtv.net (Chris)",
and the MotherBoard buffered this to Video RAM:

:+> I've turned the AMC pot (VR5,) to increase modulation on AM but it
:+> doesn't scream like my peaked Cobra 25 or TRC-485. I noticed that there
:+> is a mod for the Cobra 146 in which you clip resistor Q29 for the AMC.
:+> On my 640 Q29 is next to the AMC (VR5.) Will this mod work on my radio
:+> also? Thanks in advance.
:+>
:+> http://community.webtv.net/thumper485/THUMPER485SQTH

>Have you ever tried talking to Mexico when the Mexican skips are in
>(everyday)?

most of the skip i get in spanish is from south america. due to the closeness i have to the mexcian border i dont get much skip there but i often talk to the south americans because i do speak a little spanish.

>
>
>BULLSHIT? Whaddaya what? Are you agreeing or are you disagreeing with me?

i disagree. the percentage of english speaking foreigners is the same on ham radio as is on cb. most everybody around the world is tought english from the start if there lucky enough to go to school.

>And no. Never assume that "people in far away places can speak english just
>like the hams can...". If they could speak English (the local talkers), and
>you try to contact them, of course they won't call back to you because
>you're a "mudduck"! Just because you can hear them doesn't mean they can
>hear you...

no such thing as one way skip. although i mostly run at 25 watts out on ssb i am sure i can gather enough power to make it to who ever i hear.

From what I've seen, many of the "standard" amps (standard as opposed to high drive) perform better and reproduce the audio quality of your radio more faithfully if you keep the dead key from the radio down around 2 or 3 watts and let the radio swing up from there as far as it wants. Examples are various flavor of Palomar 250 amps, Texas Star, etc. Even some of the larger amps such as Messenger 4V's and such work fine with a lower dead key because they have a built in driver section.

For those of you who big boyz that run the bowl, I'm talkin about amps for the normal folks. Ones that under normal usage wont require beefed up alternators and such.

X-Deja-AN: 545846170
Newsgroups: rec.radio.cb

I'm currently trying to make a decision between a Lincoln and a Galaxy/RCI to serve as a 10/11m base station. While the Lincoln, after chipswitching, has some very nice features, the low level AM modulation bothers me a bit. The Galaxy/RCI radios I'm considering are the RCI 2950, Galaxy Saturn, 2517, and the 2527. The only criteria I'm looking for is that the radio is able to be modified to work well on 11 meters, as well as 10 meters, after conversion (I hear the Saturn loses some capability on 10m).

Any suggestions would be greatly appreciated...

Oh, get off your high horse, CB1999. You don't go to the ham radio newsgroups because you don't have a ham radio license and therefore nothing there applies to you.

We (myself and the other ham operators here) are all CB operators also, and therefore anything that is said in this newsgroup does apply to us also. That is especially true if the discussion relates to ham radio.

The only "sandbagging" that is going on here is coming from you.

And the CB'ers in this newsgroup claim that it is the Hams who are provoking the arguments in this newsgroup.

> I agree. But why is it only a priviledge for
> Amateur operators to make long-distance QSL's?

Ummm. Maybe its because they have a radio license which makes it legal for them to do it. Yeah, thats it.

> I'd like to find that book that teaches me how to be a CBer. The last time

When you were having a conversation with all those hams in your town, did you tell them that they suck as you did in the quote at the top of this message? If you had, I'm sure the conversation would have gotten a lot more interesting.

Ah, now we are getting somewhere. You finally admit that hams who use CB equipment have a right to discuss CB related topics in this newsgroup. And you claim that we have no right to discuss out-of-band issues because it does not have anything to do with CB or Ham radio.

So, what in the heck are you doing here, Jeff? This newsgroup is for discussions about CB radio. This newsgroup is called "rec.radio.cb," not "rec.radio.freeband" or "rec.radio.out-of-band."

You are the one who does not belong here. By your own admission, your discussions about "freeband" activities, or "out-of-band" activities, does not relate to the topic of this newsgroup.

IValentin,

>Can someone explain to me how these "division" numbers work when DXing?
They don't.

Everyone wants to be No 1.

The largest group currently is the Italian based Alfa Tango club where Italy is division 1. However, over the years many international clubs have started with their own country being No 1 thereby confusing the situation for everyone.

In fact I believe the original group was the Earth DX group in Brazil, S. America, where 2 echo was the N. American designated number, many other groups existed way back when, World Wide Radio Group out of Canada (1WW) etc etc.

My own opinion is that country designated numbers should follow the DXCC listings. That way everyone would follow the same list.
>Also, what are the letters in between? For example: 14AT123 or 14SD123
>I assume that 14 is the division, but what about the letters?
The letters in between determine the club or groups name, IE; AT Alfa Tango, SD Sierra Delta or whatever.

This has always been confusing to me and therefor I only use my club numbers when contacting another member.

>> 100 watts on a sideband frequency of 27.355-27.405 and work THE WORLD !!!
------------------------------------------------------------------------

Try telling that to some of the stations in the mid west or even out on
the west coast.
```

Not only do they hear Europe less frequently but they have to get past all the far stronger stations down the east coast who only have water to get across instead of several mountain ranges.

It is the same the other way round for us mobile operators here in Europe. Working New England down to Florida is no problem, hearing and talking to Utah, Idaho, Wyoming, Montana etc. is a whole different ball game.

You try it sometime, even on SSB, and don't you dare turn the power up:-)

Phil / UK

CB1999 wrote:
>
> Breaking the rules is not my priority on the DX agenda.

Yes it is, Jeff. Getting a license is easy. So easy, in fact, that the only explination for your continued illegal activities is that you get a kick out of breaking the rules.

> My interests are the ability to communicate, PERIOD.
> And I don't want to become an "elite" by taking a
> test. I know the rules. And thats all I need.

But how do we know that you know the rules? How does your neighbor know that you can operate a radio safely without putting his family in danger? That was one reason why the FCC was created, you know? And that is one reason that the FCC put such heavy limits on the untested, and now unlicensed, CB operator, you know?

You would not say the same thing about other public activities, Jeff. You would not say, for example, that the auto driver does not have to have a license. By your argument, all that matters is that he knows that he knows the rules.

We (the other people on the highway) can only pray that he knows how to read the words on the stop sign at the intersection that we are both approaching. We have no right to expect that he take a simple test to prove at least some basic knowledge of vehicle operation (and a eye test to insure he can even see the stop sign).

And please don't try to claim that your radio operation is not a public activity. You're radio waves don't stop in your living room. They go out all over the country and can affect hundreds, or even thousands, of other people. Those people have a right to expect you to take a simple test to prove that you at least have a basic knowledge of radio operation.

Not absolutely accurate, Tim. Only 27 of the countries around the world teach any English in schools (we're talking about regular schools, not optional classes offered at colleges and universities).

I read this in a State Department brochure while I was in Italy. I remember it so well because I remember how few Italians understood English, even though they were one of the countries listed who offer English to their students.

Oh, I agree that the operation of these radios in the CB band could be
threatened, but you suggested that the MARS/CAP operations were
threatened (you said "good bye legal mars and cap operations" in your
original message).

Enough said, perhaps we misunderstood each other.

The SUPERBOWLERS have been at it on that frequency to my knowledge since the
1960's. How much longer do they need to be on???
If it wasn't for this internet bullshit, probably 90% of you guys wouldn't even
know anything about keydowns and where to get amps....
There are only a few amp builders who have been selling before the internet and
still are. Most of the builders you guys talk about, except davemade... are all
new and are really internet made amps!!!!!
ICECOLD is out!!!

This was sent to me by Silly813@aol.com

Two rednecks were sitting at a bar when a young lady nearby began to choke on a hamburger. She gasped and gagged, and one guy turned to the other and said, That little gal is havin' a bad time. I'm agonna go over there and help. He ran over to the young lady, held both sides of her head in his big hands, and asked, Kin ya swaller? Gasping, she shook her head no. He asked, Kin ya breathe? Still gasping, she again shook herhead no.

With that, he yanked up her skirt, pulled down her panties,and licked her rear end. The young woman was so shocked that she coughed up the piece of hamburger and began to breathe on her own. The redneck sat back down with his friend and said, Ya know, it's sure amazin' how that hind-lick maneuver always works.

toll free Im getting way off the subject but I said replace the lost oil not change dirty oil.

All I have to say at this point is if you dont like Dave Made Fine but if it is because you have to wait for it your childish.

This is a ture story I know a guy that wanted a dave made 32 pill but got sick of waiting and bought a no name 32.
Im Waiting now for a Dave Made 32 pill I Admit I would like to have it now but i know When I get it I am going to stomp all over the No-Name, not just because they are better boxes but as im waiting for my 32 im setting up my car. Making sure everything is well grounded, tuned, and what not. The guy with the no name 32 is running it off of one alternator. I took the time and saved up and bought three big leece-neviles AND YOU KNOW WHAT IT TOOK 2 WEEKS FOR THEM TO BE SHIPPED TO ME. But it beats buying them from some one that has them in stock and charges an extra $100.00

DO YOU REMEBER LAST XMAS WHEN THE FURBY'S WHERE THE HOT ITEM? I STOOD INFRONT OF BRADLES FROM 8:00 @ NIGHT TILL 6 IN THE MORING BECAUSE MY SON WANTED ONE BUT YOU KNOW WHAT HE GOT ONE. AND THE KID NEXT DOOR CANT SAY THE SAME BECAUSE HIS DAD WOULD NOT WAIT ON LINE.

IF THIS MESSAGE DOSENT CHANGE YOUR MIND YOU ARE IGNORANT.

There was an interesting article in this months Nuts and Volts about the Rat Shack. Basically, when they first started selling Ham / Scanner stuff back in the 70's all the mom and pop stores cried "foul", fearing they'd be run out of business.

Instead, they've actually seen an increase in business. Apparently, the Shack carries just enough stuff to get you hooked, but not enough to keep you going. For example, the intro to Ham Radio books, the police call guides, a few basic antennas, etc. However, to get anything really advanced or specialized, you have to order it or go to another store, like you did. These smaller stores have seen an increase in business thanks to this stocking policy.

Out of curiosity, has this been the case in your area? Sadly, right now we only have one store here in Birmingham that carries a good supply of Ham / Scanner stuff, and he is getting out of it due to internet competition. Rat Shack is the only other alternative.

Funny, I was about to ask you the same question.

Here we have 2 "texts" that same ALMOST the same thing, except for the inclusion of the aluminum alloy. The one thing that would give telfon a conductive property. Now since I know for a fact that teflon is used as a dielectric insulator in coaxial cable AND connectors, as well as antenna insulators, and that the presence of any conductivity would render the material unfit for these applications, I can therefore conclude that Teflon has NO conductive properties.

Elementary my dear Watson.......

It seems to me that any man in business has the right to sell or not sell any product he chooses. It also seems that a man in business has the right as all americans do to notify the readers of this NG of his intentions.Whats the big deal? Steve has made a decision and notified the group and his past and future customers of his decision.Some people are not pleased about anything. Thats the type people that Steve does not need. A few of the posters to this group have nothing better to do than to sit back and attempt to find something wrong with everything that someone else posts.If you don't like how he expresses himself, don't read his posts. If you don't like his business methods go elsewhere.A good day to all.

This, of course is all a matter of perception. Are the "RF police"
types, really copping an attitude, or do the fact that you know they
have ham licenses, somehow sours your opinion of them, and to prejudge
them negatively already?

> i'm not the one deflecting the arguement into a cb vs ham thing. those lines
> were drawn long ago by the hams.
> the general impression that comes across here a lot of times is that the "rf
> police" types believe that they were issued a badge with their ticket and can
> patrol the entire radio spectrum.

In some cases, this is true. The FCC often enlists the help of
volunteers to assist in evidence gathering. If the fact that there are
law abiding radio operators out there that are willing to do this,
bothers you, then so be it.

> the hams keep pushing the line that if you want to shoot skip and run power,
> get your ticket.
> it seems that if there were no problems on cb, the hams would ignore cb
> completly and the only reason that they own a cb is it gives them a license to

Again, this is a matter of perception.

> if ham is the pie in the sky that they purport it to be, why do you even bother
> with something as rinky dink as cb when you have hundreds of megahertz of

> spectrum assigned to you that goes mostly unused?

CB is much more informal, and, when it isn't abused by lowlifes, can be a great social gathering. Many hams that I know, do their "serious" radio on the ham bands, and then "let their hair down" on CB.

> in the case of the out-bands, if the hams arn't suposed to go there and

> concern you at all.
> i never seriously denied a hams right to be on cb but if you hold this band in
> such contempt, why do you even bother with it anyway???
> with all of the purported benefits of ham, cb must look like the old 100mw toy
> walkie / talkies of days gone by.

A 1999 Corvette is technically superior to any of its predecessors, but many people like the charm of the older ones. Same with Ham and CB.

>
> This is not the case.
> >It's is more a "clean, decent, law abiding, respectful vs. selfish,
> >arrogant, scofflaw".
>
> the "rf police" always come back to the "scofflaw" arguement.

Because that is the basis for any and all complaints. But even if you are the type of person that feels justified in selectively ignoring laws that you don't think "apply" to you, I still feel that anyone that deliberately tramples on the rights of other people, is more contemptable than someone that ignores a law like jaywalking.

> they always pull this one out of the hat whether they are into cb or not, again,
just > for the sake of having something to bitch about.

Again, a matter of perception. Most people don't bitch just to hear themselves bitch. They are more likely to be truly concerned with the state of the bands that they use. The point that you can't seem to grasp is the fact that "lawless" operators are reducing the pleasure for other people. It's not a matter of "I'm not bothering anybody, so why bitch". In many cases you *ARE* bothering someone, and they have a right to bitch.

> if you see someone on the street beating someone with a baseball bat, by all
> means jump in and stop it. with all the bitching that the "rf police do here,
> it's akin to turning in everyone who drops a gum wrapper or j-walks across a
> deserted country road at 12:00 am. but doing it with much vigor.

And that is the problem. You don't understand the harm in what you are doing or defending. You compare it to "crimes" like Jaywalking, where YOU are the only one at risk if you break the law and an accident happens. When you operate illegally on CB, you have the potential to

affect hundreds of people. How would you feel if your neighbor decided
to run his chainsaw during the wee hours of the morning, while you were
sleeping? What, you say, there are laws against this? What if your
neighbor didn't feel that this law "applied" to him? You'd want to
bitch, wouldn't you?

We were 16 year old kids. How would we have successfully challenged
this? We had no real proof of any wrongdoing. We were just held to a
"(much)higher" standard than the normal applicant. Where others might
have been cut a little slack, we had to do everything 100% correct.

> what if he made a lot of broad assumptions about who was causing him problems
> and some innocent kids were unfairly failed just because he assumed they were
> involved in your actions?

No, he knew who we were. He was able to gather information about us from
our almost constant afterschool chatter, and possibly a little DF'ing.

> you and your friends shouldn't have layed down and allowed your selves to be
> steam rolled this way just as i / we won't lay down and be steam rolled by a

> license to control other people.

Big words, but again, how do a bunch of 16 year olds fight the system,
with no substantiating evidence, or money to hire legal representation?
As it were, we didn't realize what had happened until after it was all
over. We just thought that the test was just REAL tough. One of us

somehow met up with the guy a some later time, and words were exchanged
and he let something slip out. Then we all put 2 and 2 together.......

> your authority over illegal radio operations is restricted to the same
> procedures as any other citizen who has an interference problem.
> you have the right to inform the fcc of your concerns and assist them in any
> way that you choose. THAT IS ALL.

I don't know. Maybe there is the same sort of drive that makes religious
people want to preach to the "unsaved". There are a great many CBers,
who run illegally, and really don't know it, or realize the consequences
of their actions. For every person that says "Yea, I know it's illegal,
so what?", there may be a one or more people that may say "Wow, I didn't
realize this would do that."

> now on the other hand, if you were to approach me / us and get off your high
> horse and look me in the eye, man to man and express your opinions, we could
> discuss them on a level playing field.

What more would a face to face meeting accomplish, than a well presented
written correspondence fail to provide?

badges with amateur licenses.

Because in most of the rest of the world, people still respect (And in
some countries, threatened with deadly force if not) laws and rules.
There is no need for "RF police", becasue the people don't flagrantly
break the laws to the extent that Americans do.

> >I think this "stuck up hams" stereotype has gotten inflated far beyond

Most foreigners would look at this as another "ugly American" childish
banter, and have no desire to lower themselves.

> >When they "take an attitude" with someone, it's when the other person
> >displays a lack of maturity, courtesy, or average intelligence.
>

Hams have no problem with people of "Varying personalities", as long as
those "variances" do not stray too far into the realm of anti-social
behavior.

> i agree with the courtesy part but your definition of "average
> intelligence" is subjective. someone with a severe learning disability
> probably won't get a license but someone with several phd's in

an idiot.

I am fairly loose on the definition of "average intelligence". As long
as they can carry on a decent, respectable conversation, and have a
little fun, without carrying on like a total idiot, then I'd say they
have "average intelligence". We're not talking Mensa here.....

> someone who is less mature than you may seem childish but someone who is
> more mature than you may get a mental image of you as an adult in diapers.

I doubt it. There is a level that once you reach it your maturity is not
questioned. Some may be "more mature", to one degree or another, but
generally speaking, maturity means that you don't act like a 12 year
old.

> everyone is different but the elitest, intolerant, inflexable and single
> minded "destroy the varient cb'er" attitude that you and other hams display
> here really doesn't help your credibility either.

Tolerance. Just what do you consider tolerance, and what are YOUR limits? I have no tolerance for Butt-heads, who act like mental midgets, and play games like little kids. If that is intolerant, in your book, than so be it. Other than that, I am EXTREMELY flexible. I, more than you know, understand the differences in personality. If a CBer, or any radio operator, misuses the privileges that are given them, then they deserved to be "destroyed" (your words). Play the game by the rules (And not necessarily the FCC ones, I'm more concerned with the rules of society), or don't be surprised if you're asked to leave.

> especially if it's on frequencys
> that don't concern the hams as hams or cb'ers. if you don't go into the
> out-bands and out-banders don't stray into the ham bands, then it's really
> none of your or any other hams business, it is?

You're right, I don't care what goes on on the freeband. And you won't hear me complain about people who operate there, unless they run really dirty "Joe Screwdriver" radios, and wipe out my QSO's on either 10 meters or the legal 40.

> the only other explaination is this rf police / gi joe attitude that everyone

> even the OO's are supposed to be monitoring the ham bands and not the out
> bands or cb.
>

No, that is YOUR interpretation of what's happening. I see it a little differently. I see a growing number of people who are getting tired of always being stepped on and forced to deal with a group of people who have no concept of what it means to be a good neighbor, and who are now starting to DO something about it. If you start to see a growing number of volunteer CB OO's, policing the bands, with the FCC's blessing, don't be surprised. It's been a long time coming. After all there wouldn't be a movement to localize radio enforcement, if there weren't a problem on CB.

You can't blame these people for fighting for what they believe in.

Everyone seems to hate hearing this over and over, but the rules are the
rules. You want to work DX legally, you have to take the test.

I know there are some hams that are very "stuck up", but in my
experience, it is far from the majority, that the overgeneralized
stereotype would have us believe.

>
> >Reality is that hams are very friendly to people who act responsibly.

So, in your mind then, a person who acts "human" is one that disobeys
the common rules of society, and courtesy, and who is as dumb as a
stump? I'm sure there are alot of humans out there that would find this
revelation to be a bit insulting.

You tell me. You guys are so great at stereotyping and generalizing ham
radio and the people that are on it, you should have a fair idea of how
a "CBer" acts.

Someone wanted a definition of a CBer. This seems to fit the mold fairly
well, for today's typical outlaw CBer (Complete with moving arms and an
ready to use ATTITUDE).

Amen!

I would also point out that the lack of an amateur license implies neither
stupidity nor laziness but rather is the sort of elitist attitude that
violates the best traditions of amateur radio, not to mention common
manners.

Tal Abell, KC8MMO

Is there any difference in the wilson 1000 or 5000 besides power
handling?   I heard that the 5000 transmits and receives better.

Hi collegues and Dxmen

could you email to myself an url , a link or the file itself with
the 1999 AlfaTango's Call Book.
I did several DXs that has not been completed due the QSB and QRM and
would solicitate the confirmation to certain A.T. stations.
I'll strongly appreciate.

73s and tnx in advance

Robert

Siltronix 1011D "Comanche"

The Siltronix is a side band transceiver is designed to be used in SSB or AM modes. Frequency range is 26.94-29.0 Transmits and receives on 11 meter. 300 watts P.E.P. 100 watts AM. This transmitter is not so great for AM but does great for SSB. This radio has a tendency to drift and therefore earned its name "Sliptronix". When left on for a long period of time it reduced that problem considerably. This is a older tube radio and comes with a Turner Plus Three microphone and manual. This radio is in great shape cosmetically. Below is a pic. of this radio, the speaker in the picture is not included in this offer. The pic below is a 1011C mine is a 1011D, they look the same. $200.00

Hi, I recently bought a pair of uniden handhelds from Walmart for about $50 but am taking them back because they have no external power jack and batteries would get expensive. They have a Maxon there that has the external power jack and a couple more features. My question is: Is the maxon a decent radio at $44 or should I spend the extra $20-$30 and buy a midland or cobra? It will see most of its use in whichever pickup I am driving at the time and will probably go with me on a few fishing trips. Thanks in advance!

I have a Wilson LiL' wil antenna(magnet mount). It is mounted on top of the roof of the car. The car is a 98 ford taurus and the trunk is not metal so a magnet will not stick to it. My problem is I get a huge amount of noise from power lines on my recieve sometimes to a point that i can't hear more than a half a mile. this is only a problem at night when all the lights are on. It does not do this in m y other car. My question is, can I do anything about this? I cannot get away from a mag mount because it is a company car and drilling a hole is not an option. any help is appreciated.

Check out my ever changing classic video game trade/want list along with my collection here.

Join our systems development team and help us meet challenges of growing complexity. Industry leader in the development and deployment of remote sensing and intercept systems seeks electrical engineers or those with a related discipline for programs in eastern Massachusetts, California, and elsewhere. Successful candidates will specialize in: algorithm development, mathematical modeling, or phenomenology. Computer simulation experience, test engineering, and other system design skills are also desirable. Openings exist for B.S., M.S., and doctorate level candidates. Competitive salary and generous benefit package. --Please reply to jreqs@my-deja.com for more information--

4 1/2 foot spacing???
Hmm that is interesting. I might try that. I think it would be hard to tune.
What do you guys that run 2 antennas think???

I am looking to buy a new or used (good condition and working) Yaesu FT-23R, modified or non-modified. The one a friend has is equiped with a key pad, I would like this feature or info on how I can equip one with a keypad if possible. I found a place to buy one that is 5 watts, but the man said I cannot put a key pad on it. I dunno if he is right or not. Could you please send me any info about this radio. Thanks ryan

Mike.. The thing to remember is that the Lincoln has a VFo that controls Transmit and Receive all the way down to .1 KC's It is actually possible to turn the VFO from 26 mhz to 29 mhz! but it would take a long time. The 2510 has no "clarifier". It does have a R.I.T control that only slides the RX a few KC's so you can touch up people that might be off by a small amount. Performing a modification to make the R.I.T control slide on transmit is totally Idiotic. If you do you will get an unstable transceiver. Not to mention that the VFO and Freq counter will not be accurate. For example. You may turn the VFO so the counter reads 27.4550 but if the modified RIT is off a bit then you are not really on 27.4550. You may be of a KC or so. The freq counter reads the position of the VFo and not the actually frequency.

Some people have there RIT modified because they are used to CB's with only a Clarifier and no VFO. On a rig like that it is necessary to open the Clarifier up as 90% of the other guys have there's opened. If yours is locked and there are a few other guys that are all tuned in slightly off CH then everybody would have to retune to you. I personally would rather have everybody locked but since the fact that most have them opened and they do not have accurate counters(or counters at all!) I recommend that people have the clarifier opened for SSB on CB radios....

MTI. Marine technology inc. they make filters that will stop the noise.
find them on the web. I would try some caps on the pump and maybe some
ferrite chokes first though. Oh by the way hard mounting the antenna will
not stop the noise..

i had 2 ford tempos that the electric fuel pump compleatly killed the recieve
on my 2510.
go to radio shack and buy a feed through capacitor. they're about $7.00 and the
size of a roll of quarters and work like a dream.
they're easy to hook up and the directions are on the back of the pack. don't
let rad shack sell you anything else as i've tried them all and they didn't

work. this was the last thing i tried and wished it were the first.
i don't know what kind of car you have but on mine, i had to cut the b+ line to
the fuel pump as close to the pump as possible which entailed removing the back
seat and accessing the wires from there. they were right there in plain sight.
some cars like my fords have 3 wires to the pump.
1) ground, 1) b+, and 1) for computer feed back. the feed back wire will also
read 12 vdc on a volt meter. DO NOT use this wire as it won't help the problem.
maybe call your dealership for the color codes for your pump.
cut the b+ wire and connect the 2 ends, one to each end of the cap and ground
the ground lug on the side of the cap to the body and you're on the road.
mine worked so well that i had to put the speaker on my ear to hear any noise
at all and then it was hardly noticeable.
good luck.

jeff

On the contrary, this was directed at the masses. The words "illegal"
and "Sporadic Waves" happened to appear in the same context and I just
wanted to clarify some things that MAY get misconstrued. You are
correct sir, nowhere did I infer or imply that you were incorrect. Nor
did I imply that you were correct. I also am fairly secure in my
knowledge that nothing was taken out of context. Writers question
everything that piques their interests. I felt I would add my own
thoughts once I read something of close proximity among these posts. I
do no condone or rebuke any one for their opinions. As for the flames I
referred to, I meant the flames I was anticipating myself after my post.
As I stated in your personal reply, you are more than likely a fine
radio operator. No attacks from this origin. I believe eveyone has the
right to read whatever they wish and operate however they wish as long
as they bother noone else.

Happy DXing and hope
to hear you on the "off"

frequencies.

> However, if "the Bowl" and its ilk were
>to remain a steady fixture on the CB scene, then perhaps
>a few years down the line such a proposal might not be
>such a radical idea anymore.

<<IF??? seems like its been going strong in its same form since the
60's and 70's. if thats not steady i dont know what is.>>

Hm. I was on CB in the 60's. I heard nothing on channel 6 that
resembles what you hear there today. Even during sunspot
highs.

But your point that the SuperBowlers have been "active" for
"more than a few years" is noted.

<<How much longer do they need to be on???>>

Until what?

Just because I squat on someone's property for 20 years
doesn't mean I own it. And in any case, I don't think the
SuperBowlers have actually "improved" the state of the
band or contributed anything to CB except QRM.

My point was that unless the SuperBowlers are actually
willing to take the steps necessary to find a piece of
spectrum where they can legitimately "compete" without
trampling on the rights of the general public, then there's
no "sport" about it.

>>if i parked my mobile at the club house and keyed up on channels 1 through
>12,
>:>no one there watched tv untill i un-keyed.
>:>stock mic and radio, no amp, trunk mount antenna.
>:>wiped out 4 tv channels. front end overload into their distribution amps.

here's the lowdown for you.
first, put the bottle down and sober up when you try to read these posts.

second, this was, as i had stated, 24 years ago. a lot of rf under the bridge, radio's gone and i know a lot more now about keeping my radios clean. you never pulled any teenage pranks when you were a kid? get off the shitter and come into the real world.

third, what does earth ground and ground rods have to do with a MOBILE???
i'm sorry but i'm too lazy to drop an 8 foot ground stake every time i park my MOBILE and key the mic. not to mention that most property owners don't like ground stakes sticking up out of their parking lots when i leave. once they're sunk, they're kind of hard to pull back up as i'm not a SUPERHAM.

fourth, who said anything about 26 to 28 mhz? as was stated in my post, it was a 23 channel unimetrics marlin 1, STOCK, stock mic, NO AMP.

fifth, one thing i didn't mention was that the problem was cured with a low pass filter so apearently it wasn't the coax.

>Oh by the way sonny

oh by the way ass hole, i'm not your sonny.

>Just like a 911 call, soon as someone reports
>you, that's all they need to enter the QTH and have a look.

this is out and out bullshit. in case you haven't read the news, hitler lost the war. they would need a lot more than a phoned in complaint to just walk in and search a house. they know this and collect a lot more evidence than a phone call to just walk in and have a look.
with an attitude like yours, you would probably get visits on a daily basis from reports from your neighbors who just don't like you.

>If you are legal and have good RF grounding, not to worry.
>If not, then better start hoping the judge hasn't had any
>experience with CB splatter at home. Oh yeaaaaa

let me give you a senerio.

if you a neighbor of mine and reported me for rf illegal activities and happy hollingsworth came knocking on my door ON YOUR SAY SO ALONE. he wouldn't have probable cause ON YOUR SAY SO ALONE to enter my QTH for an inspection.
if he were to force the issue and didn't find any illegal equipment, you AND he would be sitting side by side at the same defense table in court when i bring a HIGH PROFILE law suit against you both for an ILLEGAL search of my house. i would sue the paint right off your walls so i would be careful making such threats to people in the future if i were you.
he would have the right to inspect the equipment AT MY OPERATING STATION ONLY and not the rest of my domicile.
i guarantee he won't find anything illegal at my operating station.
trust me, i have thought this out.
OH YEAAAAA!!!
i don't condone most activities that the rf police complain about here and yes, i do bend a few rules once in a while. it's been 24 years since i've operated a dirty radio like the one posted earlier.
the main arguement that i have with the rf police is that they don't have the right to come in here like gang busters and start ordering people around with threats and intimidation like the one you've posted here.
we know the rules and are willing to accept the consequences, if any, for our actions and rarely do any of us ask for any input from the ham community yet we keep getting spammed and blasted for excersizing our right to free speech here.
bottom line to you and all the others who got their cracker jack box badge with their ticket is, BUTT OUT, NO ONE ASKED FOR YOUR OPINIONS.

This is something that I wanted to comment on as well. In the mid 70's our locals had a CB club, and our home channel was channel 6. There was nothing of note, other than the locals, running there. When the skip rolled, the noise on 6 was no worse than any of the other 23 channels. I can't say for sure when "the bowel" started, but my first recollection of their activities didn't come until the early 80's.

Try a large cap. across the leads as close to the pump as possible and possibly to ground.

icecoldnyc@aol.comICECOLD:
<<If it wasn't for this internet bullshit, probably 90% of you guys wouldn't
even know anything about keydowns and where to get amps....
There are only a few amp builders who have been selling before the internet and
still are. Most of the builders you guys talk about, except davemade... are all
new and are really internet made amps!!!!!
ICECOLD is out!!!>>

Brings up a interesting point, Ice. First time I became aware of
your "sport" was when I was driving up Interstate 5 about six
years ago listening to my FM car radio. I started hearing
highly stylized CB chatter on it - getting louder and louder by
the moment. When it was loudest, I looked to my left and
saw a Chevy Suburban passing me - festooned with an odd
looking (to me) copper coil antenna. The driver appeared to
be having a great time - and didn't seem to care that he was
blasting through the front ends of car radios on the Interstate.

Sadly, this attitude seems to be the hallmark of your "sport",
i.e., enjoying yourself at others expense. Also, as you point
out, several new amp manufacturers have sprung up to exploit
the demand for competition class CB amplifiers. These guys
don't give a hoot who buys their products. The fact that a lot of
non-competition CB users now feel the need to buy these amps
"to be heard" on today's band is a happy bonus for the manufacturers.
More amps sold = more QRM, more aggravation = more amps sold.

So if the competition crowd has contributed anything, it's the proliferation of
higher power levels, more QRM, and a lousier
band for everyone. And I won't even mention the RFI they cause
to consumer devices.

It's sounding less and less like a "sport" to me.

Hi, I'm wondering if you had the following to connect in series,
where would each go.

1.radio
2.amp
3.Antenna tuner
4.swr\power meter

Currently I have the following in the above listed
order. The thing that makes me wonder if the connection
order is right is that the radio has a built in swr meter,
the swr meter inline, and the matcher's swr. Which should
I be looking at? Currently I adjust the ant matcher to show
the lowest swr reading on the swr\power meter thats connected
before it. Sometimes I try balancing the ant tuner's swr with
the swr reading on the swr\power meter. I rarely look at the reading
the radio's swr meter gives

Any thoughts on this would help.

Jeff

i agree to a point. but i don't have 40.00.all i want to do is clip and peak it. i have done this to other radios with no problem in a couple of minutes i think it is a real crime when a shop charges you 40. 00 for such a simple task.now i could see if they were troublshooting or soldering or putting in mod kits or channels something that takes alittle time and skill. anyhow i would greatly appreciate any answers to my question. I also enjoy doing the stuff myself. Buy the way i have 2 cobra 2000 in excellent condition one without speaker and no mods except the tr i clipped.And another with all the mods and the speaker(radio kicks ass. A guy named mike from this ng did the mods. excellent first class job.) I can also get my hands on another one let me know if you are interested. I may sell one for 300.00 or more. Thanks Ken Aka milkman
oh ya my ssb sounds fine if it dosn't i could just turn the mic gain back can't i?

I have seen this problem when power is applied to the unit. It doesn't have much protection in the power circuit so that when operators connect the radio to a power supply or car battery, via lighter socket or wire, it gets a spike of voltage and goes blank. Something that worked for me, is to disconnect the radio, then turn on the power switch to drain the circuit, and then turn it back off and connct to the power source. Other than that, I suppose that you could build a little diode circuit to keep the spike away from the radio.

If this is true, then self-policing is a complete failure. ARS has relatively few operators. This makes me wonder why they can't control the "handful" of illegal operators in their ranks. Surely, from what I've read in this newsgroup, this can be accomplished in a few days. Just call Mr.. Hollingsworth, right? It has become apparent to me that he is unable to carry this mission. I can find and record a CBer in my town in less than an hour without $30,000 worth of truck and equipment, hundreds of employees, a multi-million dollar budget and thousands of RF police. Why can't they do something about a licensed operator?

I've been on the radio long enough to know that you can't reason with a jammer or fool. It only makes it worst to acknowledge a person. By doing so you've only validated their existence. They now have a purpose and a victim. Anyway, I'm just trying to help some of you guys, and you know who you are, because crying isn't working either.

Not one, REPEAT, not one single unlicensed
station has been prosecuted by Happy
Hollingsworth, bullshit artist extraordinary.

Any doubts? Tune into 14313 kHz or 3950
kHz. Jamming, name calling, swearing, all
coming from unidentified stations, and
Hollingsworth has yet to catch even ONE!

All Hollingsworth has REALLY done is go
after a few IDENTIFIED high-profile hams,
who were using call signs. He made examples
of them, and the rest of his big enforcement
campaign is bullshit and lies.

More facts: ALL FCC monitoring stations were
closed in 1996. There are no more FCC
monitoring stations. The so called automated
monitoring network is a total failure. It never
works, and Congress has refused to give the
FCC any more funding for this failed project.

Hollingsworth junkets from hamfest to hamfest,
squandering the tax payers' money and feeding
BULLSHIT to ham operators who eat up the
bullshit like babies eat candy.

The rubber ducky antennas are probably the problem. They can also be referred to as "air cooled dummy loads" since they work about as well. Get a pair of inexpensive mag mount 5/8th wave antennas with barrel connector adapters for the radios and that should help get you the mile or so you are looking for.

I've got a newbie question hat I haven't seen covered anywhere:

Most linears I've seen info about talk about a 4W input, which makes
sense
but SSB units put out 12W. Do I have to pad the output of my radio down
to use it with a linear or will it take the 12W SSB just fine?

Thanks,
Chris

Has anybody ever heard of an amp called the "Silver Streak"? I was
wondering if anybody had one that they would sell to me.
Thanks alot,
Andy Bloomquist

Dear Sir, im a 40 yr old male and a 25 yr old veteran in this hobby of C.B. radios and scanners and i must say that for the first timer id buy something nice and reliable. Probably a old vintage rig, like a Tram, or an old Browning, these radios are very plentyfull even though their 25yrs old some of them, and ones in good to excellent condition are not too rare to find.Personally ive just bought a Tram-D201-A 40 Channel/with SSB (single side band) for 400.00 dollars but im quite sure this rig will last me the rest of my life, and its VERY reliable and sturdy, VERY loud in audio levels and its pretty to look at, so i wish you luck in your endeavor but its just one opinion, and its mine.
Take Care, Best Whishes.... Frank at jj475171@aol.com

The bad thing about the par floods is that they do not give off enough light
for the amount of energy used, if you use a good dusk to dawn fixture and
not one of the $20 unit it will last a lot of years, the cheaper units have
a crappy ballast in them and the lamps are also the cheapest they could
find, the amplifier should not affect the light fixture.

I understand that many countries don't share our CB band. And I do understand that most DX stations don't speak English on CB, but what about the ones that do? Huh? If they CQ for my call, what, do I just ignore them? I don't have a "pin-point" signal tracking system that tells me whether or not they are local. Every DXers signal I recieve here in this illustrious "bowl" around my parts is 20 over 9 (AM or SSB). And if they identify their QTH (and call) and their location, what do I do then? I've already gave them a QSL.

Besides, 137's 5-element beam antenna that he made for me works excellent. Don't need a better antenna. I'm still trying to get his 5/8's wave verticle from him.

> Hell, some people might not want to go to 10 meter

Breaking the rules is not my priority on the DX agenda. My interests are the ability to communicate, PERIOD. And I don't want to become an "elite" by taking a test. I know the rules. And thats all I need.

You sound like you mean expanding the amateur band,this "testing and
reasonable limitations an a license"is the only REAL diff between ham
and CB.

I think Andy just don't want any CBers to have one,RF limited would never offer a 10 meter rig that couldn't be converted,I'm just suprised it doesn't have an echo and transvestite board.

Not communists.  Liberals... Liberals who are slowly but surely edging
this country toward socialism.  It's not too late yet.  Elect as many
Libertarians as possible (to reverse the process), as a second choice
elect Republicans (Republicans would at least slow the process down.)
Don't vote a democrat for Dog Catcher.  Any party who would stand rank
and file to defend a proven perjurer, accused rapist, suspected
traitor and murderer deserves to be completely wiped from the ranks of
our political system.

...Ha Ha Haheeheeehheehheharhaharhaharhar. Oh Please,,,,,, stop,,,you're killing me.

...I would be willing to bet that half or more of the problems telephones and tv's experience are from shitty design and installation of those devices. The other half or less I would venture are legitimate complaints brought on by linears and/or poorly tuned radios.

...If the feds ever do show up, they better be ready to condemn a lot of cable company installations and equipment before they think of tagging anyone else.

...The FCC is its own worst enemy. They are the ones that allowed

that crappy, unfiltered, poorly designed stuff into the country in
the first place. What did they think was gonna happen?
..As far as the public having to endure "rf splatter", I guess that
$9.95 plastic phone wasnt such a bargain afterall was it?

you guys have a lot of nerve, to pick on this gentleman. Although I've
never met this person, being a registered monitor station, was very popular
back in the '60s and '70s, it was sponsored by the same people who publish
CQ for S 9 magazine, not sure which one. Many hams, started listening to
short-wave, public service frequencies, before it developed into a interest
in amateur radio.
Not everybody who enjoys listening to short-wave or public safety wants to
be a ham. Just like some hams don't listen to short-wave broadcasters for
public service agencies.
I doubt, that there's any harm in being or continuing to use the
registration call signs issued by the magazine. What you care as long as
he's not broadcasting on amateur radio frequencies for public service
frequencies. this is America, if this is how this person enjoys his pursuit
of happiness, let him, without insulting for making fun because his hobby is
not your hobby.if you need someone to pick on in the radio hobby, go to 80
meters at night and listened to some of the so-called professional radio
operators going at it. Let the man in joy his hobby.
enjoying your operations center , forget the ones who make fun of something
they do not understand.
Steve

AM and SSB power are measured differently. AM power is measured using average wattage, and SSB power is measured using peak wattage. The mathmatic relationship is average times four equals peak (under normal conditions). The reverse applies as well: peak divided by four equals average.

So, when an amp says it's rated input power is 1 to 5 watts, that means the amp can comfortably handle 20 peak (SSB) watts.

As for padding the unit down; that's what the power level switch does.

I have turned the radio on to make sure it works, but since it is not converted, and i am a not a licensed Ham, it has'nt really been tested right yet. I did find a modification that is different from the others that are well known, so i am assuming it is the new version. If, i can find the circuits on the board where they should be, i will give it a shot.

As far as Coppers is concerned, my orders over the last 2 years with them have all went well. I have not had the problems that others have had with them, and i have bought over $1400 worth of radios and other items. So, i have no valid reasons to not do business with them. If, down the road i start having the problems with them that others have had, i will stop dealling with them. But until then, whenever i need a radio item, i will probably buy it from them. Best Regards

BULLSHIT? Whaddaya what? Are you agreeing or are you disagreeing with me?

The statement was simply asking what about the stations that do speak English.

And no. Never assume that "people in far away places can speak english just like the hams can...". If they could speak English (the local talkers), and you try to contact them, of course they won't call back to you because you're a "mudduck"! Just because you can hear them doesn't mean they can hear you...

Have you ever tried talking to Mexico when the Mexican skips are in (everyday)?

First off, let me state that this post is of my own personal opinion and is no way connected or endorsed by Sporadic Waves. I am a monthly contributor to the Magazine, The editor/publisher graciously allows me a column each month. I also write for several other publications. The groups of people I have met and QSO'd with through the magazine are terrific. No one advocates the interruptions of any others transmissions or intentional jamming, no matter WHAT some others may post. I am a freebander. It is what I do. It is what I write about. Spare me the flames of my responsibilities to radio and upholding the law. I have been doing what I do since the early 70,s and that is what I write about. It is my choice and I willingly accept the consequences should the time arise. I do not splatter the spectrum with a gazillion watts nor am I rude on the air. I talk all over the world between 25 and 28 megs. and usually with no more than 12 whiskey out on the side. My reason is simple. I have no interest in a repeater rebroadcasting my signal. I achieve the same results as the "big hams" at a fraction of the cost. I know many fine hams and I respect what they do. My choice is my own. I do not interfere with other operators and my QSO's are usually limited to a quick exchange, long enough to exchange cards. The fact that a magazine can raise your ire by containing stories and modifications not endorsed by our Uncle Sam is absolutely fantastic. That is what makes America great. One may not agree with what one reads or hears, but that does not mean the others view point should be censored or condemned. It is all about knowledge and I can not emphasize that point strongly enough. When you begin slinging innuendo that is unfounded and unproven about a group simply because of its vehicle of media, your own credibility becomes instantly compromised. There are volumes of publications that are of questionable content available. Laws abound that make many activities legal elsewhere , but illegal here. Does that mean we should not be able to read and learn about these situations? Reading an article by a publication or an author does not

automatically mean the content is advocated by such. I don't hold
anyone to any set of standards when broadcasting. If you want to act
like an idiot, why the hell should I care? There is a channel selector
and an off switch. I also espouse the virtues of microbroadcasting.
Should that be censored? I am an Independent Radio Station. Please don't
judge an entire organization or even an individual based on a few
un-informed posts. Do the research yourselves people. Come to your own
conclusions.

Just friendly advice.

First, it is for AUCTION. Secondly. Start your subjects for things on
auction with

FA:

That way those of us who dont care can filter out these messages.....
basically do what you did for the TRC-88 but instead of FS: use FA: go
figure what the A stands for.

Hank

If you just got a hold of this (or even if you didn't) may I suggest not butchering this radio up. It is a VERY desirable radio. If you cannot find R131 then please take it to a "tech" for your sake. Dont try to save $40 on a $300.00 radio is what I am saying.

Dont take out TR24. Dont ever take a modulation limiting diode or transistor or at the very least on this radio. Your SSB will sound like crap if you do.

Hank

People who use it are paying homage to their hero Seinfeld.

Not too surprisingly, I don't use it myself.

That should doesn't do it for me. Fact is, television is a big waste of time.

Greetings!

Well, you have a Lil' Wil' antenna.

One problem, what is the radio?

With any mag-mount, you'll ned a radio that has ANL - Automatic Noise Limiter, and NB - Noise Blanker.

And since it's a company car, I take it you're using the Cigarette Lighter for power...

Hmmm...do some checks...

Plug in the radio, don't start the car. Listen to the radio.

With skip rolling, this should sound pretty noisy. Noisiest times are near the morning hours, just after sunrise, pretty much all day, then noisy at night just right around sundown. This is Skip, a propagation event. The earth's ionosphere is active during the day by sunlight and the extra oomph provided by sunspots.

Once thats been determined, now onto the next step...

Start the car, and listen to the radio. Then without keying, or transmitting on the radio, disconnect the antenna.

What happens to the noise?

If it disappears, or it's gone. The problem is with the radios ability to reject, or filter out noise while the engine is running.

Or it's it's still there only less in volume?

With the above in mind, you may need to get a better radio.

Not trying to insult, just some "portable" radios are just that, portable, with little to offer in features to help make the radio more enjoyable.

If you need some steps, nd since you have a company car, it can at least offer help in determining where and what kind of, noise you're getting from the car...

http://www.iserv.net/~codyspc/engine.htm

It's a basic primer...but if you follow through on the links provided, you'll get a better idea and there is a "test" you can take that can help you determine what you're up against.

While Dancing with the Mouse on 08 Nov 1999 16:58:17 GMT, the Modem interrupted with an MNI from "cgo2541273@aol.com5200 (Charles Golden)", and the MotherBoard buffered this to Video RAM:

:+> I have a Wilson LiL' wil antenna(magnet mount). It is mounted on top of the

```
:+> roof of the car.  The car is a 98 ford taurus and the trunk is not metal so a
:+> magnet will not stick to it.  My problem is I get a huge amount of noise from
:+> power lines on my recieve sometimes to a point that i can't hear more than a
:+> half a mile.  this is only a problem at night when all the lights are on.  It
:+> does not do this in m y other car.  My question is, can I do anything about
:+> this?  I cannot get away from a mag mount because it is a company car and
:+> drilling a hole is not an option.  any help is appreciated.

I'm looking for a Turner m+2 hand power mic of mid sixties vintage.
Should be in presentable, functional condition.

Email

cfries@tic.bisman.com

I will avoid personal attacks like the ones you have posted calling some one "son". This is a direct conflict with what these postings are SUPPOSED to be about. I will abide with the issue at hand.

I find myself quite amused that you take what you hear and read quite literally. I have been investigating the Feds. underhanded dealings concerning global communications for almost a year, as part of my studies devoted to journalism.

Have you ever heard of spin? Propaganda? The FCC is inundated with such high-tech crimes such as cellular cloning and computer related crimes. What you are hearing and reading is complete hyberbole and spin. Simply put, this is another political maneuver to get the cash flowig. It has absolutely nothing to do with enforcement of radio. I now what he has said he was going to do. I know he is going to streamline, reorganize, etc. Pure hype. This is akin to a politician telling his costituents what they want to hear to pacify their whetted appetites to appease the here-and-now. You are welcome to believe whatever you like. Take it from somene who has been denied countless interviews, granted a few, and no-commented to- death when it comes to who really is in charge at the FCC. If you believe it's saviour time, you have one hell of a wake-up call pending you my friend. I can supply you with hundreds of hours of interviews from the NSAs covert Echelon global spy communications system(monitors ALL modes of communication for "key" words) clear down to the FCCs local, regional and National Directors comments. Who you think is in charge isn't, and what you think will take place, won't. The resources simply are not there and congress' pending vote on the current bill is unlikely to gather the muster to pass. Even if it does, the allocation of funds is the equivalent of just a few dozen or so added employees. No, your messiah is a false god. What will likely take place SOMETIME in the future, is that local municipalities will be given the jurisdiction of enforcing their own areas. But this is old news. Like I said, you are free to believe what you like and no one will think ill of you for it. But these are the facts. It is my profession and my passion to educate the public.(I am a writer) Especially when it comes to Big Brothers Bull. There are many avenues for you to obtain the true information on what is truly taking place. Unfortunately, the gentleman who now claims he holds the reigns at the FCC has not the power or the status that you so graciously allow him. But with a few more posts like yours, I am sure that "Camelot" is just over that next hill............

Just because I squat on someone's property for 20 years doesn't mean I own it. And in any case, I don't think the SuperBowlers have actually "improved" the state of the band or contributed anything to CB except QRM.

You better look into that a little further....

Squatters rights have come a <<long>> way in some states... To the point of where it is owner beware!

They can also do what they have done with HF amplifiers..

Make one radio an EX or E or ??? version, sold only when the buyer is an exporter.

That is the way that many Henry amps (as well as all others) are brought into the country with 2 holes in them, 10 meters on the faceplate, etc....

Sold under the guise of "export only" units.

The same can be done for the microcoding of the radios...

Kinda like the President George... Only the coding got out about how to change modes on it.

It wasn't due to them being unable to make a case...

It was a question of politics and money.

The plea bargaining system of America ruled once again.

Well, I will choose not to go their, but Concrete man knows what I am
saying.....

As for you.. Childish? Right.

>
> This is a ture story I know a guy that wanted a dave made 32 pill but got

> sick of waiting and bought a no name 32.

Fool... But wait.. The No-Names are duplicates of the Dave design and chassis, etc., etc., etc... So why would their be a difference?

Just something to keep in mind, as you drive around mauling him with 3 alternators (Did you know that you will need a 4th to keep up with that amp, as well as at least 6 batteries? Guess you did, huh?) to his one?

Bet that will make you feel good, huh.. Knowing he is on a system that would strain to run an 8 transistor amplifier, and you have one that would cruise at 24 transistors...

> Im Waiting now for a Dave Made 32 pill I Admit I would like to have it now
> but i know When I get it I am going to stomp all over the No-Name, not just
> because they are better boxes but as im waiting for my 32 im setting up my
> car.

I think you will be comparing apples to oranges.

Give the guy with the No-Name your Dave for a night, and you run his no-name. I bet you maul him.

Waiting has nothing to do with the vehicle setup.. Nothing at all. Please don't attempt to confuse other people by plying it like it does.

Making sure everything is well grounded, tuned, and what not. The guy

> with the no name 32 is running it off of one alternator. I took the time and
> saved up and bought three big leece-neviles AND YOU KNOW WHAT IT TOOK 2
> WEEKS FOR THEM TO BE SHIPPED TO ME. But it beats buying them from some one
> that has them in stock and charges an extra $100.00

I purchase Leece Neville alternators for $160.00 brand new here in Houston.

And I don't have to wait but a day if he is out of stock, as their is a Presto-Lite distributor here in town, and another large wharehouse in Bryan, Texas.

Bet if you looked, you would find a distributor in your town that would sell them to you for nearly the same price. Not rebuilt, new.

>
> DO YOU REMEBER LAST XMAS WHEN THE FURBY'S WHERE THE HOT ITEM? I STOOD
> INFRONT OF BRADLES FROM 8:00 @ NIGHT TILL 6 IN THE MORING BECAUSE MY SON

> SAME BECAUSE HIS DAD WOULD NOT WAIT ON LINE.

What does that say to me.... That you are a fool with too much time on his hands.

The Furby is sitting in the bottom of a toybox, or on a shelf now, doing nothing. In return, you wasted an entire evening, that you could have been at home cuddling with the wife, or whatnot, but chose to stand outside a store to purchase a stupid doll.

I feel for you... On prozac then, I dare ask?

The insatiable

I don't believe that he trashes the band at all.

Let's see...

He runs 25 watts PEP into an Antron.

BOYEE.EEEEEE...

That is raw power their, huh?

I bet he can skin a cat just with the ERP from that station.

Your a troll and a leech.

Have a bad day.

No, usually the Machlette parts are not very good for HF range RF... Either
LF or VHF..

They are a commercial "name".

Was it Calif Elect. or Murphy's?

Let's take a good look at this idiot, shall we?

> LOOKING TO TRADE MY ALMOST NEW COMPAC ARMANDA

You mean, Armada, right? Discontinued line.

1530DM 166 MHZ PENTIUM MMX LAPTOP

WOW! You have an almost new laptop that hasn't been made in two years!

That is cool!

FOR NEW OR PERFECT BASE, LAPTOP HAS ALL THE BELLS AND WHISTLES . CD, HARD DRIVE. MODEM WINDOWS 98.

WOW! It has a hard drive in it?

28.8 modem, too, I bet.

COMES WITH NICE CARRING CASE. BOUGHT IT FOR 1800 FROM COSTCO 1 YEAR AGO.

So you got a laptop that you say is almost new, that you bought a year ago, paid too much for and are now trying to pawn it off on the rest of the world?

Got news for you... I got a Toshiba Libretto 166 MMX with a 4.3 gig hard drive, 32 meg of RAM, 10/100 / 56K Xircom card in it, the whole 9 yards..

And I paid less than that, that long ago!

You got had.

Don't expect to get something for nothing. That laptop is advertised by the computer resellers right now for less than 300 dollars.

Sorry to burst your bubble, but buyer beware, and next time you want a computer, go to a computer store, not CostCo. CostCo sells manufacturers one-offs, overstock and second rate merchandise that either didn't do very well in the stores, or didn't ever need to be produces.

> PROBABLY COULD GET 1000 ON EBAY.

I looked.

A P-120 was going for 300 dollars.

A P-2X266 was going for 400 dollars.

Guess again.

DONT WANT TO HASSLE FOR IT.

You mean don't want to be laughed off EBay.

> PLEASE EMAIL FOR PHONE INFO.
> THANKS

Your welcome. Please try to be a bit more reasonable next time.

It should go

1
2
4
3

Then, use the #4 meter to match the tuner, and read the power output of the amp.

Use the radios meter to find the match that the amplifier presents to the radio.

This is copywrite 1999 by K7JOE, all rights are reserved.

Ladies and gentlement,
Having gone into Radio Shack yesterday to buy a couple feet of RG-8X coaxial cable, I came across a new offering in amateur radio gear. The new Radio Shack HTX-10 10 meter HF mobile radio.

Unit tested is serial number 3xx, so one of the first out of the gate.

This is a new entry into the 10 meter mobile market. Here are some features:

Freq Coverage: 28.0 - 29.7 Mhz
Modes: AM, FM, LSB, USB.....there is no CW capability
Power: 25 watts nominal LSB, USB, FM.   8 Watts carrier on AM.
Freq Tuning Rates: 100 Khz, 10 Khz, 1 Khz.
Fine Tuning: moves both TX and RX frequency +- about 2.5 Khz
Accessories: mobile bracket, mic, and power cable.

Upon seeing the radio, one does a double take -- the radio looks almost identical to the current offering of SSB CB radio. The noticeable differences are few: The 10M rig offers an up/down microphone, the 10M offering says "10 meter HF transceiver" on the face plate, and thre 10M hf radio has a significant heat sink on the back panel (integrated into the back panel actually).

Powering the rig up, one notices the very bright LCD display and backlit

volume, squelch, channel/frequency knob, and mic/rf gain knob (concentric knobs).   The six multi-function buttons are not back lit, but are labeled in white lettering.

Hookup uses a now-industry-standard T type molex cable. I simply unhooked my Kenwood 2M mobile and plugged this into the car. Antenna used was a 8 foot whip for 10 meters.

What's good: SSB TX audio reports were excellent, though I did tend to over drive the radio. Adjusting the mic gain from full blast to about the 1 oclock position helped. Power out on my peak watt meter indicated

27 to 28 watts of RF out on SSB, about same on FM, and about 9 watts carrier on AM.   The Mic and RF gain knobs are dual concentric knobs on the shaft...be careful to adjust only the mic gain down, and not the RF gain too!

The noise blanker is excellent -- very effective with ignition noise.

This radio does repeater splits, and the splits can be programmed. When first getting the radio, it was programmed with a 600 khz split! Gee, I thought -- perhaps a tech at the factory in Korea programmed the radio thinking it was a 2M rig perhaps? since the normal 10M repeater split is only 100 Khz. But, this is easily reprogrammed with a few keystrokes.
Too bad -- the radio does not provide CTCSS encode like the HR-2600. SO, you are restricted to carrier operated repeaters only, or need an outboard tone encoder to access toned 10FM repeaters.

There are 5 memory channels to store favorite frequencies, modes, shift,

etc. Nice.

Band scan is available and is carrier operated only. Memory scan is not

available/offered.

Interesting to note the output in FM is a full 25 watts. Not sure how it will hold up in that mode for continuous duty....hmmmm. Most of the other offerings gave significantly less output on AM and FM compared to the less heavy duty cycle modes like SSB and CW.....time will tell.

Ergonomic comments: freq selector is obviously from it's cb brethren --

it is clickety-clack and no different in size from the other knobs. The six multi function buttons are not back lit, and white lettering could rub off. The clarifier (Rit/Xit) knob functions as a "f" button (push it to get to the sub-menu) -- I found myself moving the transmit/receive frequency when hitting the button. Could have put the F-function on the squelch button instead...my opinion only. Mic is light weight and cord is not really good "flexible" one -- kinda stiff. Microphone jack is not the normal 8-pin connector or 4 pin connector that's common on ham gear. Nor is it the new modular jack connector -- it's an odd 6 pin connector. Not something RS stocks now, and probably a 5 or 6 dollar item at mouser, if you can find it at all.

There is no provision for VSWR meter, though there is an S/RF meter at the bottom of the display. Frequency resolution is only 3 digits past the decimal point, so, probably not ideal for the digital modes (though the fine tuning/clarifier does move both TX and RX frequency to zero in on an exact frequency). There is no provision to turn OFF the RIT/XIT. They are tied together and "on" all the time.

Received audio distored slightly at higher volume levels, but an outboard speaker helped a lot. Use one if going mobile, I suppose.

Under the hood: Wow, have 10M multimodes changed in the past few years. No point to point wiring. 2 circuit boards only -- one main board, one display/front panel board. All surface mount technology. Decent looking crystal monolithic filter. The final amplifier transistor line up is the familiar 2SC-1969 -- capable of about 15 watts

PEP each. There are two transistors, running in class AB1 configuration. Nice to see a commonly available (and relatively inexpensive) final PA being used.

The board components and variable adjustments are NOT labeled. Disapppointing, since tandy's HTX-100 was well labeled for ham adjustment. This one will need a service manual. Worse, there was no schematic diagram enclosed. This was real disappointing for a "hacker ham" like me.
Overall, Tandy should be complemented for hanging in on the ham market. The sad news is that the products are getting "cheaper" both price and perhaps quality wise. The recent entry in the HT line is certainly no HTX-202, and, I dont believe this HTX-10 is constructed as well as the HTX-100 was (a Uniden clone running CW and SSB only). FYI, the 2M radio -- the HTX-242 mobile is now discontinued -- interesting to see what is brought out as it's replacement.

At $149.95, this looks like a fair value for the new "code priveleged" ham. Bear in mind it is lacking CW capability (perhaps a sign of the times to come) and has some of the shortcomings noted above. At the same time, it is very competitively priced, offers 25 watts of output power, and is available across America.

Questions may be directed to the author, Joe, K7JOE at mailto:K7JOE@yahoo.com

Toll, Nonames are more along the lines of the Dominator, Skullcraka, Foxy
design
slightly different tuning, combining, transformers etc. I thought they were
a direct copy until I actually saw one firsthand.

Yes, the 5000 is built 10 times better.  Go to a local cb store / shop and
ask to see there cutaway 1000's & 5000's.  You'll see for yourself or check
out the web site.  The web site won't be as convincing.

I am a newbie to radio, `don't have a clue. Please help.

I have a TRC-496 w/ a Wilson 1000 mag mount. That doesn't seem to transmit and recieve very well. I understand that the radio is made by uniden and I wonder if there is a mod for it.

And would a pre-amp for the attenna help? What is a pre-amp? What should I look for? Are they exspensive? I live near Coppers (www.coppers.com) but don't know what to get.

Any and all help is appreciated.

Thanks,

Muley

Built for CB Testing and Repair. This is a Leader LSG-227. Some features
are :
1) Center +1, -1 and adjustable frequency to +/- 5 Khz.
2) PLL 40 channel.
3) Mod Output 400Hz , 1Khz and 2.5 Khz.
4) Modulation adjust from 0 -100%.
5) Calibrated output from -110 to -10 Db.
6) Twin Meters.
7) ANL/NB Tester.
8) Delta , Led's , ect...
9) A bunch more.

Almost like the B&K 2040 except made by Leader and a tad smaller.

Can be seen at the top center of the picture at
http://home.mpinet.net/grassa

$275 Shipped.

Joe,

Can you comment on the internal board in comparison to either the Eagle Sidewinder 400 or the RS 11 meter offering radio?

Trying to find out if their are any similarities....

Other than that, nice review, well thought out, and looks like this just may be a decent rig after all....

One thing, I would bring the carrier power of the FM mode down to 15 watts.

The 1969 doesn't like more than about 8 watts AVG power output each.

Toll Free

Actually,

Win 98 runs fine with a P-166. I do it on 3 different machines in my house.

Don't forget channel 18 and 23 where also the "big boy" channels at one time.

Then, everyone migrated to 6, and the boys who couldn't make it on 6 moved back to 11.

The white boys (the majority) that couldn't spend the money necessary to run on 6 last sunspot cycle moved up to 26. Usually you would find sweep tube amps their, and nothing bigger than an M4V.

That really goes against what Concrete Man was saying before, then.

I was led to believe by what was posted on the newsgroup that No Name was

building direct copies of the DaveMade design in a metal shed in his
backyard.

Oh well, live and learn.

PS... Foxy has changed her design... Copying someone new! ;-)

Look on the amateur radio groups..

You can also shoehorn a swan 350 transformer in that radio, although if memory serves me well, the B+ will be a little high.

Old sweep tube amp transformers will work, too... Especially the ones that used all the grids in the tubes! :-0

Toll Free

can't
> i?

Yes, that will work, however, your average power output on SSB will drop to near nothing that way.

The limiter is their as a psuedo-compressor... Take it out, and you lose SSB capabilities..

Leave it in, and mod the radio other ways, that only affect AM operation, and you still have a kick-ass SSB radio.

Different radio.

Yours was based on Uniden's board design.

The new ones are based on Wireless Marketing's fecal matter.

.....snipped.......

I heard a story of a man working as an mechanical engineer that retired from a position after 20 yrs service to this company.
Upon retiring from this company, he hung out his shingle as an consulting engineer.
Not long afterwards, the same company he worked for came to him with a problem. The problem was one of the machines that the engineer had cared for during those many years had decided to give up the ghost and the remaining staff were unable to correct the

failure.

Almost reluctantly, the engineer agreed to take a look at the broken machine. After a bit of testing, figuring and some head scratching he made a mark at a precise spot on the outside of the machine. He said to the other mechanics, "drill here" and proceeded to create a bill of $40,000 which he gave to the Accounts Payable department.

The owner of the company thought the bill excessive and returned it unpaid with a request to itemize the bill before payment would be made.

The engineer itemized the bill stating $1.00 for the chalk to mark the spot and $39,999 for knowing where to put the mark.

He got paid.

On numerous occasions I have seen stated that a shop is charging too much for what seems like a minute amount of work in a radio.

This kind of comment always kinda' stuck in my craw. I would usually think to myself, "if it's that easy why don't {you} do it and save yourself a few bucks?"

For those of you not in your own shop {defined as paying rent for a store front} that feel you are being taken advantage of, I can finally say out loud...."Kiss my fat freckled ass! That's what the price of ignorance is going for these days!"

There! I finally said it. Whew! I been dying to say that since 1974. I feel much better now.

Ok, let the flames begin.

Digital Radio Systems Tested

Tuesday, 2 November 1999
WASHINGTON (AP)

COMPANIES TESTING a new breed of radios that hold the promise of clearer sound and could give consumers data like stock prices and traffic reports now have federal guidelines to help them bring digital radio to listeners.

The Federal Communications Commission this week outlined benefits listeners will get as analog radio becomes digitized. An FCC proposal gives companies that are designing and testing digital radio technology a road map for achieving these goals.

Using the language of computers - 0s and 1s - to transmit information, digital broadcast signals are less susceptible to interference and are more efficient. What's more, radio airwaves can carry large volumes of digital information that consumers could one day access over traditional radios or handheld computing devices.

Among the issues the FCC wants to evaluate is the compatibility of new digital radio systems with existing analog service. The commission also wants to look into the affordability of new radios that consumers will have to buy to get the digital signal.

The FCC is seeking input on the best ways of introducing digital radio to the public. Under one method, broadcasters would be able to transmit digitally encoded music or data at the same time as they send out regular AM or FM service.

That means traditional radios would not become obsolete right away; they would continue to receive stations even as listeners begin replacing them with digital models. It also would mean that existing frequencies could be used to accommodate both digital and analog signals.

Several companies that are already testing technology to do just that hope consumers will benefit from CD-quality sound from their FM stations and less interference from their AM stations within 18 months.

Suren Pai, president of Lucent Digital Radio, said the FCC's proposal falls in line with priorities already established by the company. "This gives us a very clear framework in which to focus our efforts," Pai said.

Robert Struble, president of USA Digital Radio, characterized the FCC proposal as "the very important and logical next step in the process."

The public can comment on the FCC proposal until late January. Companies plan to submit data of their tests to show that they can offer digital radio without disrupting existing analog service.

The commission also is leaving open the door for digital radio models that would resemble the way digital television is now offered. Under that system, new spectrum on different frequency bands would be allocated specifically for digital radio, rather than squeezing them into the existing spectrum.

But WHY? There is no logical reason for it except that the ARRL (a body notoriously controlled by hams even tho anyone who is into radio is welcome to join) pushed for a limit to long distance CB comms when 11 meters was taken from hams to make them feel better. After all, from what I've heard on the air, and read in the news group, there is no other band quite like 11 meters when it comes to daily band openings. Hams were bitter and angry about losing one of thier best DX bands so the ARRL pushed for a limit on CBers to pacify them. I admit that this is a bit of a reach however there is no other even remotely logical reason for such a limit.

Hi Craig most radios with three wires have the orange wire for memory usually a fuse of 1/2 amp will do and this wire will have to stay hot all the time to retain that memory.   The red wire most of the time is for power and is usually connected to the ignition so that when you turn off the key to your car the radio will go off. Most of the time that red wire has a 2 1/2 amp fuse.   I am a ham AB5KR but and here is the but I own a CB Shop in McKinney Texas. 73. Larry.

I have the pinout for the stock up/down mic, but what is the color scheme that corresponds to the pins?

1. audio
2. shield
3. transmit
4. up
5. down

I thought a Maxon was a commercial radio that can be programmed for the right channels if it was designed for the specific band you were going to use.
http://www.maxonusa.com/prof.htm
I think you had better have a look at the maxon product range before you pass up a opportunity to buy one of these radios for such a low price.

Gets mighty expensive if you can't pass the code. As for the rule change
petition, this is the only change I would support. Freeband should
remain illegal.

it is most definetly not published anywhere on the internet due to all the members world wide that would be in jepordy. if the station you work wants to qsl they will give you there address over the air. its considered rude to send one with out asking permission on the air.

Looking for advice on a good mobile for my rig. Has to have am,fm,ssb
(10 meters or HF). I already have a yeasu 840 for my base station but
this sucks for am operation. Need a good talking mobile on am as well as
the rest. thought about the galaxy DX-99V but don't know much about this
one. any suggestions would be appreciated. Also has to be simple to mod
for 11 meters.

twistedhed@webtv.net wrote:
<<I will avoid personal attacks like the ones you have posted calling
some one "son". This is a direct conflict with what these postings are
SUPPOSED to be about. I will abide with the issue at hand.
  I find myself quite amused that you take what you hear and read quite
literally. I have been investigating the Feds. underhanded dealings
concerning global communications for almost a year, as part of my
studies devoted to journalism>>

Forgive me for being skeptical and/or naive, but can you
provide some specifics other than vague references to

underhanded dealings concerning global communications
by the Feds?

<<Have you ever heard of spin? Propaganda? The FCC is inundated with such high-tech crimes such as cellular cloning and computer related crimes. What you are hearing and reading is complete hyberbole and spin. Simply put, this is another political maneuver to get the cash flowig>>

Again, forgive me for pressing the small matter of details, but can you mention specifically what cash is flowing as a result of Riley Hollingsworth's amateur radio enforcement efforts? Amounts? From whom? And to whom?

<<It has absolutely nothing to do with enforcement of radio. I now what he has said he was going to do. I know he is going to streamline, reorganize, etc. >>>

Maybe you can help me here. Of all the published remarks made by Mr. Hollingsworth, I cannot find any mention of his intention to streamline or reorganize anything. I do see where his stated goal is to assist in cleaning up ham radio, and in another recent statement he promised to look into 10 meter incursions by unlicensed stations and sale of type-unaccepted equipment.

<<<Pure hype. This is akin to a politician telling his costituents what they want to hear to pacify their whetted appetites to appease the here-and-now. You are welcome to believe whatever you like. Take it from somene who has been denied countless interviews, granted a few, and no-commented to-death when it comes to who really is in charge at the FCC.>>>

What you say sounds very impressive. I'm sure there is a good reason that you provide no specifics regardig either your identity or the role that you played in our government.

<<If you believe it's saviour time, you have one hell of a wake-up call pending you my friend. I can supply you with hundreds of hours of interviews from the NSAs covert Echelon global spy communications system(monitors ALL modes of communication for "key" words) clear down to the FCCs local, regional and National Directors comments. >>>

A sampling of the interviews you refer to, published here, would really help deliver my wake up call.

<<Who you think is in charge isn't, and what you think will take place, won't. The resources simply are not there and congress' pending vote on the current bill is unlikely to gather the muster to pass. Even if it does, the allocation of funds is the equivalent of just a few dozen or so added employees.>>

Sounds ominous. Er, just a few things I need cleared up here:

* who is it that we think is in charge and isn't?
* what is it that we think will take place that won't?

* what current bill is it that you are referring to?

<< No, your messiah is a false god. What will likely take place
SOMETIME in the future, is that local municipalities will be given the
jurisdiction of enforcing their own areas. But this is old news. Like I
said, you are free to believe what you like and no one will think ill of
you for it. But these are the facts. It is my profession and my passion
to educate the public.(I am a writer) Especially when it comes to Big
Brothers Bull. There are many avenues for you to obtain the true
information on what is truly taking place. >>

Can you provide a bibliography of your published work? I'd
like to catch up on what I've been missing all these years.

<<Unfortunately, the gentleman who now claims he holds the
reigns at the FCC has not the power or the status that you so
graciously allow him. But with a few more posts like yours,
I am sure that "Camelot" is just over that next hill............>>

Maybe I missed it, but it's unclear who specifically you feel claims
to hold the reins of power at the FCC and who really holds them.

I have a Mura Power mic with a five pin din connector... I cant figure
out how to wire it to a Cobra 20 Plus... I cant seem to find any
schematics or wiring diagrams.... Anyone know how this is done??

Thanks for any help,

Chris

If you can get Presto-Lite Leece-Nevile
part number L/N 4854A 250 j-180 EVAC for less the $586.57 each
or
part number L/N 1112c rectifiers for the 250 j-180 EVAC for less then $344.92 each
or
part number MOT 110-555 12V130A for less then $178.00 each

You are a lucky person but $160.00 cant be for the 250's or the rectifiers but they are the alternators I have three of and if you dont think they will drive a 32 pill and the m800 driver you are wronge.

I'll the rest of the bull shit we are fighting over is just opinion so ill leave that alone. But you do put up a good fight.

First off, it sounds like you live in a noisy area so short of moving, there's not much ya' can do about it. Your street is probably one that uses mercury vapor street lamps. These are really bad for noise and it isn't the fault of your antenna. What does kill the noise is a good radio. More specifically, one with a good Noise Blanker. A noise blanker is different from an Automatic Noise Limiter. In fact, it is superior. A noise blanker will insert periods of silence in your receive signal when it detects impulse type noise. An automatic noise limiter will limit the amplitude of the noise that gets into your radio, but there will still be noise. The best bet is to use a radio that has both an ANL and a NB. The Grant XL is such a radio.

If you want reliable, short range communications, FRS is the only way to
fly.
You would probably get more range on the CB during ideal conditions, but
the radio is far less convenient and reliable. Ideal conditions, for short
range communications, have not existed on my CB until this evening. The
last 5 weeks have been very very noisy. Mind you, I had no problem talking
from this continent over to several countries in Europe.... :->

Yeah, I'm gonna try and get more information on this. Apparently it is a
little more radical than 10m as you have to change the injection side on the
RX. I smell a project coming on here....

: memory serves me well, the B+ will be a little high.

The Swan 350 uses and external power supply, the 117xc which can be wired to operate the Siltronix. It was a popular mod in the early 80's for some odd reason. I did a few into the matching speaker cabinet for some customers. The Heathkit HF radio power supplies will also work if done right.

: Old sweep tube amp transformers will work, too... Especially the ones that
: used all the grids in the tubes! :-0

Doesn't make sense to me... Simple is to use a standart external HF radio power supply, or find something out of an old tube TV that would work, yep, they work...

: Joe <joeamp@mindspring.com> wrote in message
:> This customers Siltronix here for repair dripped tar and has cemented
: itsef to my desk bench.

You should find out what caused the melt down...

too bad, it's a great and fun radio

:> Power transformer.......... anyone have one for $$ or NOS Sweep tubes,
:> D-104 ect.
:> tnx Joe

Life goes on, my siltronix collection works fine... The final for most Siltronix radios was the famous 8950 output tube. Real early versions used the 6LF6.

cheers

compairing apples to oranges again?
what you say about robbery and getting involved should go without saying but
understand, not all out-banders and people who run power on the "legal" 40
always run mega-watt stations or always disturb their neighbors or others on
the channel. there are a few of us who really take others into account on these
matters.
the question i asked a few months ago remains unanswered, "who appointed the
hams as the defenders of the spectrum?"
if an unlicensed person makes an incursion into ham airspace, shoot him down.
if you, personally, or someone you know has an interferance problem with a
splatter box station, hunt him down like the dog that he is.
if you live in seattle and i'm in fla talking 100 watts on a harmonic clean
station on the out-bands and not riding a harmonic into 10 meters, leave me
alone for this IS none of your business. if you hear me on the out-bands,
either you are hopeing to hear dead air and am upset to hear a voice or you
have alterior motives for being there yourself but that couldn't be because you
sound like someone who would NEVER break the rules.
if hams arn't supposed to be on the out-bands, why are they even aware that we
are there and why are they bitching about us being there?
unless someone has another explaination, it seems that they bitch about a band
that doesn't concern them just for the sake of bitching.
get off the gossip fence and go do the laundry, old women.
jeff

Hi Andy,

An amplifer for the transmiter side of a CB is not legal, but people have them and use them often. On a standard CB radio a distant station will increase your S-meter reading of his signal 1/2 unit for every doubling of power he does.
Receive preamps are very legal, but hard to use in big cities where the noise is too much. Most amplifiers for CB include a preamp for receive and some increase in power going out.

cheers

it's probably cold war paranoia that keeps cheap international cb communications out of the hands of every day people like us.
but that doesn't make sense. i could go to key west and talk to castro and still be under the 150 mile limit but i think there's something in there about international comms isn't there?
even then, i could be talking to a local friend with coded sentences that sound like innocent conversation and still be over heard by castro's henchmen. OOOH, that's scarey isn't it? :):):)

Someone else gave you the link to your Cobra's mic socket. As for the Mura......armed with a continuity checker you should be able to figure out the microphone without tearing it apart. The leads are most likely....

Tx Audio
Mic Gnd
GND
PTT
Rx

Check all pins to find two that register continuity. Key the microphone and find the other two that measure continuity. You'll find that one of these pins is common. This will be your GND. The PTT line goes to ground when you press the PTT button. When you release the button, it pulls the

Rx line to ground. Some radios need the Rx line pulled to ground before the receiver is active, but some don't.

To find the Mic output, turn your meter to AC volts on its lowest range. Key the microphone and whistle into it until you measure a voltage on two of the pins - make sure you turn the volume control on the microphone up full bore first. If it is a pre-amplified mic, which yours is, you should measure about 60mV, maybe a little more. A stock, or unamplified, microphone will generate about 30mV - sometimes less, sometimes more if it is a Shure unit. Keep in mind these are low voltages: 30mV = 0.03V

On some (many) microphones, there is only one GND lead and it is common to the microphone element and the Tx/Rx switch. However, this isn't normally the case with preamplified microphones. It is sometimes impossible to determine which one of the two microphone pins is the shield and the hot lead with a hand-held meter. If you connect your radio up and it starts squealing like a pig, you probably have them reversed!

Hope this isn't too technical.

Seems like if you had any truth to speak you would post it under your real email address. False address for not so true stories. The Davemade guys seem to think that when you sell their products, you should sell only their product, (WRONG). Concrete and I were keeping the promises going through email, but the promises never would materialize. Seems to me that this has always been a typical problem as many others have spoke about the same. When something goes wrong, the team Davemade has to send email and make phone calls to get their buddies envolved to cover their butts so they don't look so bad. No one brings this on themselves, except for the team called Davemade. Concrete, come to Memphis and we can finish our email there session there. I'll bring the laptop. Quit crying and start doing the right thing, Produce what I will say is a good product and quit trying to be selfish.

I didn't notice it until the early 1980's myself. I know the FCC has cracked down on the higher-power operators periodically over the years. I would guess that a "keydown" would be akin to shottin' ducks in a barrel for the FCC. But I must confess the mudduck crowd doesn't bother me. I can't say I've missed a chance for a qso cuz of mudducks. I can't say the same is true of some of the banditos south of the border though. I had a contact into south africa washed out today by some spanish speaking yahoo with an echo mic and a love of his own voice. Just keep in mind - its only a hobby!!!!!!

>> Why? Why can't the ITU and the FCC change the regulations for 11 meters?

>Neither has ever and will ever be in favor of having world wide bands...

where have you gotten your information from?
sounds like wishfool thinking to me unless you have an inside line to the heads of the fcc and the itu. i wouldn't make such sweeping sentiments if i were you lest you start sounding like the other rf police who post inaccurate attempts at intimidation.

>used by people unwilling to learn a few simple rules and principles as
>well as operating procedures.

believe it or not, there are some of us who have read the rule book and have the technical background to be a ham but choose, repeat, CHOOSE not to for what ever reason.
the only difference between you and me might only be a piece of paper and the frequencys that we choose to communicate on.

>
>Many countries don't share our CB band and many DX stations on CB don't
>speak english like most do on the ham bands.You may also want a better
>antenna.

many countries don't subsribe nor are subject to the itu treaties and many countries that i've had contact with DO have english speaking operators.
it would be kind of stupid to call cq, dx to someone if you don't speak their language.
the way you're talking, it sounds like a person in Germany automatically knows english when his ticket first hits his hands. there are out-banders in other countries who speak english also.

> Hell, some people might not want to go to 10 meter
>> and work DX's. Some might just want to stay 11 meters.

sounds like me to a tee.

>Why?More priveliges ,modes,power and space,and you can still break the

I need a CB radio modification page. I have looked on 6 search engines for
about an hour each and I haven't been able to find any with any modifications
for the CB radio that I have, nor a single one that had any realy good content
or more then 6-7 plans for modifications. Any help would be great... Thankz

Gawd, <memories :-)> I remember the good old 13-883.

When I was a kid, our family had one in the car (around 1975-76). Quite a good radio - seemed to be more sensitive & selective than the old 13-857 we had that was stolen. Can't remember if it was a -B submodel or whatever. I remember listening to it on a receiver - nice fat full AM sound.

The 13-883 we had was NOT a PLL rig but used a "crystalplex" method that, if I recall correctly, used only 13 or 14 crystals. So not a lot of self-inflicted background noise/ phase noise/birdies, etc.

-Bill

>Yes it is, Jeff. Getting a license is easy. So easy, in fact, that
>the only explination for your continued illegal activities is that you
>get a kick out of breaking the rules

DIFFERENT JEFF HERE.
this is NOT always true for every cb or out-band dx'er.
for me, i like 11 meters and slightly above hf communications and have no
personal need for morse code, packet, fm, satallite or a lot of the other
things that come with the tests for a ham ticket.
for me, i like good old ssb or am comms. this is why i would prefer a licensed
portion of what is now considered the out-bands for an in between point between
cb and ham.

for some of us, all that other static is like cookies in your hard drive taking up a lot of spact that could be used for more useful operations. i've had hams tell me here that they learned the code and forgot it and haden't used it in X number of years just to get on 10 meters. if this is the case, why bother with it at all? even the U.S. navy and coast guard don't monitor cw any more. maybe they know something that the ARRL and the ham community doesn't? HELLO!!!! this stuff about, " i had to learn it, you should too", doesn't cut it any more. if the medical community felt that way, we would still have surgery while still being awake and aware.
i know about the itu and all that dinosaur shit. the itu should be more concerned with high power commerical broadcast than compairativly low power personal communications like cb and ham.

>> My interests are the ability to communicate, PERIOD.
>

my feelings exactly.

>> And I don't want to become an "elite" by taking a
>> test.

the company is better, the air clearer and the shit shallower on the out-bands.

>I know the rules. And thats all I need.
>
keeping this in mind, a piece of paper and the frequencys that we use may be the only difference between us.

> But how do we know that you know the rules?

give us a test and, upon passing such test, allow us a small portion of the requested spectrum to operate on.

> How does your neighbor
>know that you can operate a radio safely without putting his family in
>danger?

get off the shitter and into the real world. we are not asking for mega watt privledges in the microwave band so keep with the program here.

if my neighbor has the brains of a turd, he won't be climbing my push-up pole and hugging my antron for hours on end on a daily basis.
if he's a responsible parent, he won't let his kids do it either.
most, but not all, cb / out-banders use normal elevated antennas and know the higher the better and their yards don't look like a rats nest of wire antennas.
we wouldn't need all of this with the small portion of the requested spectrum.

>That was one reason why the FCC was created, you know?

that's bullshit that stinks out loud.
in 1934, they had no idea what the effects rf fields had on people. the fcc was created to keep the bandwidth which was limited at the time by existing

technology from becoming the tangled mess that cb was in the 70's. at least they had enough foresight to see that comming. now the fcc has become a puppet of the ARRL and has become a sleeping giant that has become bogged down by the lilliputions of the ham community and bows to the wishes of said community or risks the wrath of it's ham masters.

>that is one reason that the FCC put such heavy limits on the untested,
>and now unlicensed, CB operator, you know?

not altogeather true.
the essance of what you said was true but the intent is false.
the heavy, albeit, outdated limits were put in place because cb was intended to be an easy, unencumbersom form of local communications for the average person. this is all well and good for the average person. then you have the amateur frequencies for the golden gods. now there is a need for a portion of spectrum for the people who fall in between. before 1978, 27.235, 245, 265 up to 27.405 were considered "the out-bands" and a forbiden zone. the fcc wised up and discovered that we had out grown 23 channels and in 1978, and opened up the other frequencys for public use. this shows that they CAN do it and there is no sane reason that they couldn't do it again.
you might say what will happen in in another 20 years? there's always the 40 below ch 1. and 20 years after that? with all of the technological advances happening every day with data compression and vhf / uhf miniaturization, there will come a time when the ham community will abandon 10 meters altogether because the components used for such an "ultra low" frequency will be too big and bulky for practical use and we will be there for nostalga's sake to fill in the gap on this futuristic view of a yet unused band. by then, neither one of us may be around to argue the point.

>You would not say the same thing about other public activities, Jeff.
>You would not say, for example, that the auto driver does not have to
>have a license

here we go again with the apples to oranges thing again.
in the 44 years that i've been on this planet, i have not once been hit by an un-licensed radio operator nor have i read in CQ, QST, popular communications or any other publication, for that matter, any one who has. or did i miss the headline that read, "SCHOOL BUS RAMMED BY OUT OF CONTROL GALAXY 949. 20 CHILDREN SENT TO LOCAL HOSPITALS."

>By your argument, all that matters is that he knows
>that he knows the rules.

in case you don't keep up with the news, there are many auto drivers out there who have lost their license for one reason or an other who continue to drive. by the same token, there are many who have never lost their license who still ignore the rules of the road.
help me out here, i've lost track. was this an apple or an orange this time?

> We (the other people on the highway) can only pray that he knows how
>to read the words on the stop sign at the intersection that we are both
>approaching

sad to say, this is not a requirement either.
there are people in this country who either can't read english or can't read at all.
i don't know what state your in but i've heald drivers licences in new york, florida and georgia and ALL of them have a road sign SHAPE test where the person taking the test has to be able to identify the sign by the shape and not the words on it. the ham community needs to come to the realization that not all people walk the goose step that the ARRL would like to see. if i were a ham and became a member, they would get sick of hearing from me in short order about a lot of their policies.
again, apples to oranges.

>We have no right to expect that he take a simple test to
>prove at least some basic knowledge of vehicle operation (and a eye test
>to insure he can even see the stop sign).

i've read this 4 times and still don't get your drift. there ARE such tests and why shouldn't we expect such things?
i think your loop just unlocked.

>And please don't try to claim that your radio operation is not a
>public activity. You're radio waves don't stop in your living room.
>They go out all over the country and can affect hundreds, or even
>thousands, of other people. Those people have a right to expect you to
>take a simple test to prove that you
>at least have a basic knowledge of
>radio operation.

HOLY SHIT, LOOK OUT, HE WENT NUCLEAR!!!!
do you mean to tell me that if i were to get on 27,585 ssb at 100 watts, that i would wake and disrupt the the lives of THOUSANDS of people???
WOW, i didn't know that i was that important. just think of all of the children out there who's lives would be destroyed out there if they heard me say "OH SHIT" blairing out of their mother's microwave oven doors. i don't think i could live with my self. not to mention when i call CQ from florida. if the skip is rolling northwest at the time, all of the pacemakers that would go Y2K in utah. thank you for saving me from a life of unbarable guilt.

JEFF HERE AGAIN, sorry, i hit the send button too soon.

>Those people have a right to expect you to
>take a simple test to prove that you at least have a basic knowledge of
>radio operation.

help me out here. i've read the constitution twice but i can't remember who
wrote the passage that you've mentioned here.
was it Alexander Hamilton or one of the other framers that wrote it into the
Bill Of Rights? or, maybe i'm wrong. it could have been in the Dead Sea
Scrolls. if you know, please let me know.

all this whole post has added up to is a lot of apples to oranges comparasons,
conjecture and general hype on your part that has done nothing but damage the
small amount of credibility that the ham community has left here.
in the future, please get your shit together, think out what your going to say
and then reasearch it for accuracy.
good night.
NOT THE OTHER JEFF

: is used.

Bull. If a person can talk from the US to Australia - and that happens quite frequently from the Western US - then they can talk to any other country in the world.

It may not be as easy as on 20 meters, but it is easier than on 10.

I have QSL cards from close to 100 countries from 10 meter CW - and they were all obtained within one year.

:   There are only about 260 countries in the entire world, and he claims

Not nonsense - but it would require a lot of air time and dedication.

Hams don't want that. They think that taking some stupid test gives them some morale right to talk to anyone they can hear who is willing to talk back and that this right should be denied to anyone who doesn't take thier stupid test.

I challenge the authority of any group who does not answer to congress to be able to make laws that I have to live by. FCC officials are not elected by the people nor do they answer to Congress. They are appointees of the executive branch of our gov't. The FCC has even been used to place taxes on the American People. Taxes that Congress had already failed to pass. So what did the Clinton administration do? They had the FCC apply the tax to our phone bill then forbade the phone companies from itemizing the tax on our phone bills. In fact, the law is that if a citizen asks the phone company why the bill went up they are legally required to lie to us and tell us anything except the truth that the FCC increased the phone bill.

The very existance of the FCC as it exists now is blatantly unconstitutional. Yet, no one with the green stamps or political influence to do anything seems to have the balls to challenge this and other threats to the Constitution.

I'm going to get off my soapbox now b/4 I get really going. The topic of gov't abuse of the Constitution makes my blood preasure rise.

i would think not as it's hard to suck AND speak into a microphone at the same time.
if those hams were not acting like the popes of the channel masters, they, in my opinion, probably don't suck.
not to mention their signal sounded real fine comming out of their kenwoods, icoms and yaesu's on 11 METERS, (i'd bet a weeks pay on it).

Dwight, I suggest that you find a large Ham club in your area that has a couple of devoted QRP operators. You might be surprised what they can do with even just 1 watt of power.

Don't try to compare HF to 2 meters - they are not at all similar.

: Boy, I must conceed the discussion to the RF engineers on this NG.
: Espectially you Mr. Lowtower, or perhaps your real name should be inserted
: here. Aparently you guys know much more that both the Diamond and Larson
: Antenna Companies, which presently use Teflon to minimize RF splatter on
: several of the ground elements on some of their antennas. I must say I am
: impressed. All of this wasted talent is being spent on CB.

Maybe it does reduce splatter - but not for the reason that you seem to
think it does. If the Teflon is used to seal the joints between the
sections, then it would reduce corrosion - which CAN lead to harmonics
or splatter.

: PS: I almost forgot! You guys should also let computer board manufacturers
: know about your discovery so they'll stop wasting their time spraying all
: those components as they come off the production line. They'll be very
: unhappy to know that their attempts to reduce all of that stray RF running
: around in a CPU cabinet has been in vain.

No computer board manufacturer, that I know of, sprays their boards with
Teflon - or any other insulator - to reduce stray RF. The insides of the
CABINETS are sometimes sprayed - but with a conductive spray - so that
it can be grounded. It acts as a Faraday cage.

Hi when I use a field strength meter usually I place it in a fixed position, say a post or some location that it never moves. then I key the transmitter and ajust the controll to give half of a meter reading.   Then I change antenna untill I get one that gives me the most field strength reading. This reading is only relative and has no meaning except that you can see that the field is greater or less. All I ever connect to my field strength meter is a small antenna usually no more than 6 inches long. I have walked around my car with the meter to see where the most field is coming off. Some times I use it to see if a walkie talkie is transmitting. And if I just want to see if a box is putting out something I can tell a big differance in the movement of the meter.   I hope this helps Larry AB5KR

pllo2a@aol.com wrote:
<<now the fcc has become a puppet of the ARRL and has become a sleeping giant that has become bogged down by the lilliputions of the ham community and bows to the wishes of said community or risks the wrath of it's ham masters.>>

Sounds hallucinatory to me.

<<the heavy, albeit, outdated limits were put in place because cb was intended to be an easy, unencumbersom form of local communications for the average person. this is all well and good for the average person. then you have the amateur frequencies for the golden gods. now there is a need for a portion of spectrum for the people who fall in between. before 1978, 27.235, 245, 265 up to 27.405 were considered "the out-bands" and a forbiden zone. the fcc wised up and discovered that we had out grown 23 channels and in 1978, and opened up the other frequencys for public use. this shows that they CAN do it and there is no sane reason that they couldn't do it again. you might say what will happen in in another 20 years? there's always the 40 below ch 1. and 20 years after that? with all of the technological advances happening every day with data compression and vhf / uhf miniaturization, there will come a time when the ham community will abandon 10 meters altogether because the components used for such an "ultra low" frequency will be too big
and bulky for practical use and we will be there for nostalga's sake to fill in the gap on this futuristic view of a yet unused band. by then, neither one of us may be around to argue the point.>>

Are saying that if one wants a frequency, you should just
start using it, and eventually whoever it is allocated to will
have to give it up?

Reminds me of the famous novel, LORD OF THE FLIES where a
group of schoolboys were shipwrecked on an island without
adult supervision.

I think it is a good radio. The noise level is so high that it makes it hard to talk on a regular cb let alone a hand held. This high noise level is caused by the Sun. We are in the middle of solar cycle #23. To prove my point try getting up before the sun comes up and using your hand held. You should have a lot more luck talking talking to someone. And just for the fun of it if you hear stations comming in during the day from far away places try to talk to them, it could happen that your signal will skip back to them. I have talked to Canada on 2 watts or less and I am in Texas. Have Fun With Radio   Larry AB5KR

>I know there are some hams that are very "stuck up", but in my
>experience, it is far from the majority,

you must hang out with a VERY small clique that buries it's collective heads in
the same small sand pit or you are so high on your ticket that you can't see
anything but dirt below your feet

.>that the overgeneralized
>stereotype would have us believe.

we didn't over generalize or stereotype anything. the hams who act like the
airway patrol have demonstrated this to us here beyond a reasonable doubt.

>So, in your mind then, a person who acts "human" is one that disobeys
>the common rules of society

the fcc rules are NOT common rules of society as not all of society operates a
transmitter. these rules only govern only a small portion of society. don't try
to include cell phone users in this as they are exempt from the rules governing
foul language and "good operating practices".
rules / laws against murder, rape, arson ARE common rules of society. so please
don't STEREOTYPE us with these henious crimes or un-licensed automobile
drivers. contrary to the ARRL's belief, there really IS a difference between
apples and oranges.

>You tell me. You guys are so great at stereotyping and generalizing ham
>radio and the people that are on it, you should have a fair idea of how
>a "CBer" acts.

we know all too well how hams act. they have proved themselves here on this
news group with flying colors. this is the very reason why we ARE cb'ers and
NOT hams. our noses are not so long that we can afford the extra lenght to
stick it in other peoples asses or business where it is neither needed nor
wanted.

>Or file a petition to relax the rules.

what do you think our chances of getting a fair hearing before the fcc would be
when it is controled by a ham and it is in the ARRL's pocket.
the appeal would come after the excecution.
does "snow ball's chance in hell" ring a bell?

this just goes to show how one sided a government breurocricy can be.
if everyone got a fair and impartial hearing for their requests or greivences,
the word rebel would be as out-dated as the morse code.

WHY? jealous? can't stand it if someone holding a mic. on hf doesn't know the code?
i suggest that you get out of the elementary school, get rid of your secret decoder ring, take a prozac and slowly open your eyes and discover you're not in kansas any more.
there is no reason to keep the free band illegal except the ARRL wants to feel like it's the mayberry sherrif's office with barney, (the code dinosaur) still in control.

I've had the Sidewinder for a few days now and after a call to Copper and some tinkering, I'll be keeping it. My first posting was a little harsh. It's actually a nice little radio with AM/FM/SSB 400 channels plus another 800 if you count the +5 and -5 kHz switch for a total of 1200 frequencies. At $96.00 thats a real bargain!!!!!!

>Ah, now we are getting somewhere. You finally admit that hams who use
>CB equipment have a right to discuss CB related topics in this
>newsgroup.

i never denied this. we all know that hams NEVER stray outside of their assigned bands except to be on the legal 40.
if they want to come here and, key word comming up here, DISCUSS cb related topics, they are more than welcome.
it's when they come here like the clay-footed gods that they act like and try to shove their holier than thou attitudes down our throats, this is when i puke it back at them because it really doesn't sit well and doesn't stay with me very long. i don't care if they express their views against power or the out-bands. they have this right. it's when they all crowd in here with the attitude of an fcc inspector or an rf cop that gets them into trouble. they have a right to report their complaints to the fcc just like any other citizen. they do NOT have the right to come in here like gang busters on a raid and push everyone here into the paddy wagon.

>And you claim that we have no right to discuss out-of-band
>issues because it does not have anything to do with CB or Ham radio.

you DO have a right to, here comes that key word again, DISCUSS out-band issues. but if you, as a ham, can't go into the out-bands and we, as cb'ers, are willing to suffer the consequences for doing so. WHAT IS YOUR BITCH ABOUT? the only thing i can see is jealousy.
in some states, oral sex is out-lawed, even between husband and a consenting

wife.
if you were to pull my curtains aside and see us in our bedroom and report us.
aside from getting your face shot off, would what goes on in my bedroom be your business?
NO, you have no business in my bedroom and what goes on there was doing no harm to you or the good of society.
same for the out-bands. if you don't go there, and we arn't interfering with your bands, no, it's none of your collective business.

>So, what in the heck are you doing here, Jeff? This newsgroup is for
>discussions about CB radio. This newsgroup is called "rec.radio.cb,"
>not "rec.radio.freeband" or "rec.radio.out-of-band."
>

then you better tell at least 50% of everyone else here. i didn't start the free band discussion. i only joined in. where would you rather we go to DISCUSS the out-bands, rec.radio.amateur???
works for me, see you there if you ever go there.

> And you claim that we have no right to discuss out-of-band
>issues because it does not have anything to do with CB or Ham radio.

if you want the right to DISCUSS "out-of-band" issues, then you must be in the wrong place too. after all, it stands to reason in your paragraph above that YOU TOO want this right so dump the horse shit rightious attitude. it makes you look like an idiot.

> You are the one who does not belong here. By your own admission, your
>discussions about "freeband" activities, or "out-of-band" activities,
>does not relate to the topic of this newsgroup.

by my own admission where? it seems that the "uppers and lowers" reside much closer in the relm of cb than ham. you're the ones that stumbled around in the dark and woke the sleeping dragon here. your display, here, looks like a veiled attempt to run the cb'ers / out-banders and take over this news group or at least install a ham as a seudo-moderator. nice try but no cigar as your logic is so flawed your loop won't even lock.

Hi here is a very simple direction finding antenna for CB radio. Take a peice of 1/2 inch soft copper tubing 48 inches long and bend it into a circle. do not connect the ends but put a screw into both ends. Take a small lenth of coax with a connecter at one end strip the other end so that you have the shield wire and the center conductor seperate. Wrap the center wire onto the screw of one end of the loop and shield wire of the coax around the other screw on the other end of the loop. attach a broom handle across the loop and use this to turn the loop. Connect the coax to a CB that has a signal meter . You should see an increase in signal when you point the loop side that has the center conductor connected to it at the station. if that irrate homer doesn't have the qualifications to make a judgement about what equipment and activities are legal or illegal, you'll see a lot of suits plastered in the newspapers about privacy rights violations, malicious prosecutions, fileing of false police reports etc...
i'll bet that would crank up the squelch on the irrate citizen shit in a flash.

>Sounds hallucinatory to me.

then a lot of hams have displayed the same hallucination here in the past few months.
i know that you had kept up with the "news from the front" and we've even taken a few shots at each other.
how many times had i suggested a new band for out-banders and other hams would fire back with "fat chance", "no chance", "good luck :)" etc. all with the same refrain that "as long as a ham is in charge of the fcc THIS WON'T HAPPEN"?
that many rf gods CAN'T be wrong, can they?

>Are saying that if one wants a frequency, you should just
>start using it, and eventually whoever it is allocated to will
>have to give it up?
>

they have given these freqs up long ago. yes, they are still assigned but go unused. most of them are assigned as broadcast links below ch.1. how many news trucks do you see running around with 9 foot whips as their only transmitter antenna?
the ones above are mostly assigned for ittinerant businesses. today, a vhf / uhf business band radio system is easier to obtain than a 27.530 transmitter unless ofcourse they shop at antique shops and yard sales.
for these services, this is dead, wasted air that's cleaner and clearer than cb.
it's like the rancher that owns a ranch the size of new jersey and only owns 3 head of cattle. would he miss anything if a comparitivly few people stopped and took a drink from his rageing, mile wide river?
it may not be right but if he never looked, he'd never miss it except for the few assholes who try to dam and divert the river. (analogy to the mega watt splatter stations) if this were the case, i'd stand next to the rancher and shoot at the encroachers with him.

I do belive you are correct in your input of the line being changed to the more

modern
and faster proccessor but stand corrected it is still available from resellers
for 1100 to 1300 last I looked into it back in july. Toshiba laps fairly suck
and dont have much resale value. I am not saying Compac is a Dell or a
Powerbook but much better than
a Toshiba. Yes it does have a stock 33.6 modem plus a us robotics 56k and 128
meg ram with a 2.1 gig hard drive. The only reason I bought it from Costco is I
am
a Regional Manager for Blockbuster Ent. and because of an agreement I get a 15%
discount at there. Oh and by the way I could easily sell this laptop on the
market for 800-1000. Ebay trading is for Idiots like you.
Have a nice day......]

I also have this laptop and it is a very good performer with win 98 if you have
at least 32 meg ram. I have used and abused mine and it seems to be
bulletproof.
I do however think he is high on what he thinks he can get for it cash wise. I
belive I just saw one sold for 700. Still for a trade for a base it is a great
deal. very upgradeable.

my two cents outttttttttt/

the distance between rhode island and mass is too short for "skip".
the distance between mass and texas, however, is just about right.
if kasupski's antenna is set up for a high angle of radiation to delibrately
try to skip to europe, wildcat may never hear him.
good night.

Green Dragon wrote:

> But WHY? There is no logical reason for it except that the ARRL (a body notoriously controlled by hams even tho anyone who is into radio is welcome to join) pushed for a limit to long distance CB comms when 11 meters was taken from hams to make them feel better. After all, from what I've heard on the air, and read in the news group, there is no other band quite like 11 meters when it comes to daily band openings. Hams were bitter and angry about losing one of thier best DX bands so the ARRL pushed for a limit on CBers to pacify them. I admit that this is a bit of a reach however there is no other even remotely logical reason for such a limit.

Okay, Green. I'm going to assume that you're serious and want a serious answer. The United States does not live in a vaccumm. There are hundreds of other countries out there. When it comes to radio waves, which do not stop at borders, it was immediately obvious that some international aggreements had to be made.

One of those agreements specified areas of the radio for international hobby use, and set the limits of the use of those frequencies. This was to insure that there was plenty of room for hobby use, but that hobby operators would not interfere with other radio users on other frequencies.

The FCC decided to create a new radio service (CB) that would allow business and home users to operate equipment without a complicated license process. To insure that it did not conflict with the international aggreements that the States had already committed to, there were serious restrictions placed on it.

For example, to insure that the signals from CB did not interfere with the radio transmissions of other countries, they limited the wattage, the height of antennas, and demanded that CB operators refrain from attempts at long-range communications (the 150 mile limit). It was only thru the addition of these three limits that CB could be created without messing up existing international aggreements.

Remember, the FCC did not really see these as unreasonable limits (and still does not to this day). If you wanted more, there were other radio services that could provide that. If you wanted better business communications, there were the dedicated business radio bands. if you wanted better hobby communications, there were the dedicated Amateur Radio bands.

The Amateur Radio band was created by international agreement. The bands and frequencies are fairly consistent world-wide. Therefore, there is little chance that a person using these frequencies would cause problems for other radio services in other countries.

That same standard does not exist CB. A person operating a CB illegally in the US, by using excess power for example, has no idea if he is interfereing with another radio service in another country. For that matter, he has no idea if he is interfereing with another CB operator in another state or perhaps even in the next county.

The limitation on serves a serious purpose and is reasonable. If you want more, consider your other options.

That's not what you said before, Jeff. You said that American Hams suck. Since the Hams in your town are also Americans, then obviously you included them in your assessment. Again, did you tell them that they suck, or are you just saving your negative opinion only for this newsgroup? Or perhaps you're just saving that opinion for people who disagree with you?

>
> I challenge the authority of any group who does not answer to congress to be able to make laws that I have to live by. FCC officials are not elected by the people nor do they answer to Congress. They are appointees of the executive branch of our gov't. The FCC has even been used to place taxes on the American People. Taxes that Congress had already failed to pass. So what did the Clinton administration do? They had the FCC apply the tax to our phone bill then forbade the phone companies from itemizing the tax on our phone bills. In fact, the law is that if a citizen asks the phone company why the bill went up they are legally required to lie to us and tell us anything except the truth that the FCC increased the phone bill.
>
> The very existance of the FCC as it exists now is blatantly unconstitutional. Yet, no one with the green stamps or political influence to do anything seems to have the balls to challenge this and other threats to the Constitution.

Better read your constitution again, Green. The President is elected by the people. Article II of the Constitution gives the President executive power (the president is given this power, not congress). In other words, the President is in charge of the entire executive branch of our government, except where otherwise provided for in the constitution.

Article II, section 2, gives the President legal authority to create executive departments to assist him with the adminstrative aspects of government, and to appoint the heads of those various departments. The FCC clearly falls under the executive authority of the President, and is therefore completely constitutional.

me either, i think the rf police should just knock off their bullshit, stop wrecking the harmony that we CB'ERS could have here and stop feeding like leaches off the blood of the misery that they cause here. instead of comming by and picking the scabbs of the wounds that they cause. it would be nice if they would just let them heal, check their rf police badges at the door, respond to the CB RELATED posts that they like and ignore the ones that they don't instead of dumping more spam than hormell could make in a year on them and pretend to be professional in their demenor like an elmer to guide rather than a false god who looks like an asshole to everyone but himself.

OH, WAIT A MINUTE!!! WHAT TIME IS IT??? 4:20 AM!!! I MUST HAVE DOZED OFF. WOW, WHAT A DREAM!!! I DREAMPT THAT I HAD MISUNDERSTOOD SOMETHING THAT AN RF COP WROTE.
GEES, I THOUGHT, FOR A MOMENT THAT HE MIGHT HAVE AGREED WITH ME ON SOMETHING.
OH WELL, BACK TO THE NIGHTMARE.
GOOD NIGHT ALL.

You've heard the reasons over and over, Green. There is no reason to keep repeating them, since it is obvious that you don't want to agree with those reasons. Instead, you choose to dismiss the given reasons and then demand more.

I think the given reasons are valid. More importantly, the FCC thinks the given reasons are valid. If you want to change our minds, it is up to you to establish that they are not.

You're the one going around claiming that hams have no business posting to this newsgroup. If we did say that you couldn't post to the ham newsgroups, we would only be applying your own standards there.

However, that is not what I said, Jeff. Please stop trying to twist my words. I was not telling you that you could, or could not, do anything. I was simply stating that you, as a CB'er without a ham license, would have little reason to post anything in the ham radio newsgroups. If you want to read more into that then there is, then you have a very vivid imagination.

> the hams were doing a lot of sand bagging a couple of months ago to shore up

I was not even posting to this newsgroup a couple of months ago, so why are you hassling me? If you have a problem with the people who were posting here a couple of months ago, you need to talk to the people who were here a couple of months ago.

However, I seriously doubt they were "ordering people around." You claimed that I was telling you what to do with my simple statement above - perhaps that is what they were doing and you just twisted their words also.

Breaking the law is breaking the law, Jeff. You're trying to claim that your law violation are less than another law violation, but it is still a violation of the law.

> the question i asked a few months ago
> remains unanswered, "who appointed the

The FCC did, Jeff. One major aspect of Amateur Radio is the self-policing of our own frequencies. The FCC has repeatedly said that they expect that.

> if you live in seattle and i'm in fla talking 100 watts on a harmonic clean

If you didn't go around bragging about your illegal activities in this newsgroup, we would not even know you were there, Jeff. We know you are there because you told us - right here in this newsgroup.

And, once you make statements in this newsgroup, other CB'ers have a right to comment on those statements. That includes the CB'ers who also hold a ham license.

Look Jeff, I'm not going to sit here in a tit to tat argument over each little aspect of this issue. I simply don't have the time.

The simple fact is that the CB band is not going to be expanded. According to the FCC, there is simply no ligitimate reason to do so. And I fully agree.

If you want AM/SSB communications with greater range, get a ham license. Then you can use the 12 meter, 15 meter, 17 meter, 20 meter, 30 meter, 40 meter, 80 meter, and 160 meter, ham bands. All of these have far greater propagation properties than the 11 meter band.

If you want more reliable local communications, with occasional skip conditions, then try the 6 meter, 2 meter, 1.25 meter, 70 centimeter, and other, ham bands.

The CB band was created to provide local communications for people with absolutely no radio or electronics skills. The limits exist for those people. Removing those limits would place those people in potential danger (few in CB know how to safely operate a linear, for example). It would also subject the other radio services to potential interference (few in CB know how to properly operate a linear or modified radio).

If you think your skills are more advanced than that, again get a license to prove it. And then operate on the legal frequencies that have been set aside for more advanced radio hobby use.

You wouldn't know where I could get a mic or a pin diagram so I could adapt
a mic. This was passed down from my father, he used it when he drove Milk
from Wisconsin to Chicago.

Same here.

12 years and you can apply for Adverse Possession and then Full Title to a property.

A couple recently sold a property for 200K+ USD which they had 'acquired' for nada, zilch, 12 years before.

The American people make the laws through our elected representatives, Jeff. There are many laws that are not specifically mentioned in the constitution. For example, the constitution does not establish murder or rape as violations of the law, but few people in this country would doubt that they are ligitimate laws.

I have already discussed this in another message, so I'll only cover is again quickly. The constitution puts the elected president in charge of the executive powers in this country.

The president has the power to appoint department heads that set rules having to do with the adminstrative aspects of this country. The FCC was established to administer radio use.

The FCC ruled that a person should be required to take a test to prove that he has a basic knowledge of radio operation prior to operating more advanced radio equipment.

If you don't like that rule, elect a new president and have him appoint someone over the FCC that will change that it. Since, in my opinion, most Americans would agree with that rule (and few would agree with you), you have very little chance of finding a president who would be willing to change it.

I have seven (5) Panasonic WV-1414 CCTV cameras with lenses all in

fine working condition that I would like to trade for some type of ham
gear. A picture of one of the cameras can be seen at:

http://www.usol.com/~tje/pancam1.jpg

They require 24 VAC power. I can also provide power transformers for
them if needed and the right deal comes along. These cameras are used
but in great operating condition. Please email me with what you have
to trade. PLEASE NO converted commercial vhf/uhf stuff.

>Probably you are one of the many operators that start any QSO by
>asking for having coordination instead of enjoying a very relaxed QSO

if you were to look at my signature youll notice a link to the real Kp dx group from the USA. anybody thats experienced on the freebands will know that the Kp(usa) group is not comprised of qsl card hunters but only expereinced people wanting to make friends and not a large qsl collection, although last cycle when i was sort of new on the band i did do very well collecting cards but the proliferation of qsl managers and SES stations has gotten out of hand so ive stopped with all that. you wrote something to me in a private mail about being anonymous but i sign with my callsign, i dont see yours anywhere. if you need a address i suggest you subscribe to wwdx like others and ask for it there or find somebody else to send you a email with the directory attached. ive helped a lot of people find address here but i wont with you.

>If the station I have worked for any reason (QSB, QRM or ball-breaker
>on the air) did'nt pass his coordination, I feel in the right to
>retrieve his coordination in a different manner.

plain and simple, if the station you worked gave the OK to send a qsl then its fine. if not then its not OK. just because you speak with somebody doesnt give you the right to send a qsl without permission, no matter how friendly or long your qso was. i can tell your not too long on 11 meters because you asked for a url with the AT callbook. anybody on 11 for a long time would know that the info is kept confidential to protect the identity of the members worldwide since there are over 5 thousand and they are all freebanders. have a good day and good luck getting the diectory from somebody else. 73 tim ex2-AT-436

Not power lost, but rather power reflected. It will be sent back toward the antenna with some percentage lost in the transmission line depending on the type of transmission line, length and SWR.

I would do it

1
3
2
4

I bet he has a old Mobile linear with horrendous input matching problems and would benefit from using the antenna tuner to tune the radio/Amp :)

Elmering. What a nice concept. Unfortunately, sometimes when you "lead",
you have to tug a little bit to pull the "elmeree" in the right
direction. Hams, are not going to encourage lawless operation. The first
step in the "elmering" process, is to show the person, the error of
their ways and to steer them down an equally fufilling (but legal) path.
Along the way, there will be technical challenges to overcome, and
that's where elmering really shines. The sharing of technical knowlege.

But if you view each and every attempt to guide and elmer the legal way
as an affront to your "right" to do as you please, without due regard
for other people, then you'll never get anywhere, and your sour attitude
will remain.

I guess this means that you can't pass the test. The majority of people who complain about the ham test are the people that can't pass it. And then they want everyone else to change the rules to suit THEM. Sorry, this is America, the land of opportunity. If you want something, you WORK for it.

What is the intrinsic value of something, when you don't have to work for it? If you work for something, you tend to take better care of it, and respect it better. How good do you think the ham bands would be if they let just anyone on without any test? Right, about as good as the CB band is now. No thanks......

You also have no concept of responsibility. That license that you so readily discredit, is a ticket that says that you understand (at least) the basic priciples of radio and are competent to operate a potentially high powered station, and understand the repercussions and responsibilities that this entails. This is a situation that could get you KILLED if you do not follow the proper precautions. There is also radiational hazards that need to be addressed, particularly if you run high power and high frequencies. It's a lot more involved than just buying a radio, slapping an antenna on the roof, and calling DX. But since you won't take the test (and learn the material) you'll never know this. Remain ignorant and happy, and spray your antenna with teflon, and all will be well....

You sound like that guy who keeps claiming that the IRS is unconstitutional, yet it's still here. Maybe if you'd redirect your energies into learning the system, instead of fighting it, you'll get along alot better in the end.

> The very existance of the FCC as it exists now is blatantly
> unconstitutional. Yet, no one with the green stamps or political
> influence to do anything seems to have the balls to challenge this and

Maybe because the people that count, know and understand the service that the FCC provides, and are willing to live by the rules.

>
> I'm going to get off my soapbox now b/4 I get really going. The topic
> of gov't abuse of the Constitution makes my blood preasure rise.

Many people cite the constitution as the grounds for their perceived injustices. In most cases, these same people really do not understand the constitution well at all. The constitution allows for the government to appoint agencies to assist in regulating commerce.

One word. RESPONSIBILITY.

Maybe you think that the whole RF spectrum should be available to anyone
that wants to use it? Throw all the rules out the window.

You remind me of one of those "BBS anarchists" that I used to run across
when BBSing was the "in" thing with computers 10 years ago. They'd speak
out against any and all authority, without the slightest clue of the
repurcussions. Spoiled childhood.......

You really ought to seek proffessional help for this "persecution"
complex that you seem to be demonstrating all too regularly.

Hams are not out to "get you" or anyone else. You really need to stop
blaming other people for your problems. The CB band is in the mess that
it's in because of the people that use it, not due to any action by hams
or any other government conspiracy.

What relevance is the frequency? It could just as easily be 28.555.
There is no technical difference.

You really need to get a grip on REALITY Jeff. The reason that many of
us say "Fat chance", does not mean that we don't approve of it, but
rather, that we understand the governmental and regulatory processes,
and how they work, and what's involved. Because we have an opinion that
differs from your, does not make us "god wannabees".

In order to create a new "Communicator" band, there would first have to
be a formal petition filed. In the petition, you have to have a
justifiable REASON for the proposed rulemaking. The type of service that
you're proposing is already served by the ham radio service, so in the
FCC's eyes, there is not a sufficient reason to create a seperate, but
similar service. There is also the ITU to consider, and THEIR rules
would have to change before the FCC could change theirs. Now unless
you've been living in a cave for the last 25 years, you know that the CB
and adjacent frequencies, are not at the top of the FCC's consideration
list. CBers have, as a rule demonstrated a lack of cooperation and
willingness to follow the rules of radio communication. Why would the
FCC create a new band, with say, a 100 watt limit, and an associated set
of rules, that these same people will break, just like part 95, when it
suits them? You guys really dug your own hole here, so don't act
surprised when the FCC does not come running when YOU need THEM.

THAT is reality. You can believe it, or make up any number of
"persecution" scenarios to cover it, it matters not to me. There really
are gov't agents hiding in your closet. Really.

Another conspiracy theorist. Am I starting to see a pattern here?

There is virtually no difference between DX conditions on 11 meters and 10 meters. There's only a 1 Mhz difference, how much different could it be?

Hams were only upset at losing 11 meters, soley because they felt at the time that the FCC was "punishing" them for whatever reason.

The 11 meter band was not that desirable for hams. There were assignments in the band for industial, scientific and medical devices, that caused a considerable amount of interference. Hams much prefered the 10 meter band to the relatively small chunk of 11 meters that they HAD.

There is NO jealosy. Only a delusional mind would think that someone who worked hard for their privileges, would envy someone with no drive to learn or the accountability to follow their assigned rules.

I started out over 30 years ago on CB. Had a blast as a smart-assed teenager, who thumbed his nose at "the establishment" (leftover 60's influences). Met many wonderful people, and it was just great. But the band has deteriorated. The great people have been replaced by more smart-assed teenagers, and others that are still acting like teenagers, who think that the more 4 letter words that they include in their vocubulary, the more important they feel. Or the ones that think that causing someone else difficulty, is their idea of fun.

This is what pushed me into taking the ham test. It may be true that some hams are "stuffy", or a bit conceited. But I'll take that over a mindless idiot swearing, playing music, and throwing carriers, all night long. I LIKE communicating. I don't like social deviates, and that is what I find on the majority of the CB channels these days.

No, the ITU regulations apply to ALL high power HF services, not just
Ham radio. For the reasons that you correctly applied as well, to
prevent interference to other services that utilized CW. While I agree
that CW is outdated, when the rules were established, it wasn't. But
like so many other laws, it's still on the books.

Why? Will my oil fired furnace suddenly stop running? My electric company has tested all of their "critical" systems, and they all function correctly under a simulated Y2K date change.

The only potential trouble spot will be in the accounting and finacial markets that use date sensitive computers. Most other computer functions are not date sensitive. The micro controller in your VCR, Microwave, car, ham radio, etc, do not even know what the date is. There will be not REAL problems. As long as you have your finacial records (as a precaution), you have nothing to worry about.

Channel 11 was the designated "call" channel back in the early days. 11 did seem to have a much higher acivity level, when the skip rolled. That's one of the reasons that we moved off of 11 1n 1975 down to the freshly vacated (When the truckers all moved to 19) channel 10.

Thanks for re-posting some total garbage on SWR....Real Vs. Apparent SWR
that is very creative. It serves to further confuse the confused.

What about Virtual, Combined, Homogenized and Pseudo SWR?

Bob.

So much for YOUR customers.

This attitude prevails throughout a LOT of businesses and industries that have a significant hobby component. What makes it worse is that nowadays, so many products ave been consumerized and commoditized that it is almost always cheaper to replace something than to repair it.

And for most products, the equal-cost replacement is 10 times better than the old repaired thing.

There needs to be a way to get customers to understand what their sentimental attachment to a thing is worth. I sure do miss my old Invader 2000....replacing it today would cost about what it sold for new in 1961, five times what I paid for it in 1987.

Like...put a dollar sign in front of the PEP input.

If you own a shop -- what about "uypgrading" for your customers, and offering a trade-in on their broken old junk toward the purchase of new junk that'll break even sooner? At least you'd move some boxes.

How many of which had mismatches between the radio and amp? Im sure he
doesn't have THAT old of an amp........

I would recommend:

1
2
4

Why use an antenna tuner. If you get a decent antenna, you wont have to
worry about "fooling" your radio/amp/meter.

Prozac, the alternators you are going to use will just barely run the amp,
if you crank the key up you will pull back down to almost battery voltage, I
am eager to see you fit these three 250's under the hood of the firebird.
Why did you do all of this to a firebird? did all of this equipment you have
bought leave you broke? and what kind of bird watts will this swing to when
you are finished?
What voltage are you going to run the amp, driver at?

Hmmmm....somehow, I seem to have missed this entire thread and was rather surprised to find this reply in four different newsgroups to which I am subscribed. Apparently, my ISP has room for improvement.

KNY2VS is a monitor station registry issued by CRB Research in Commack, New York on February 6, 1988. I do, in fact, have a ham license (my call is KC2FNG), but for me, amateur radio is not the alpha and the omega of my involvement in the radio hobby as is the case with some people. There are hams who are hams only, there are other hams who happen to enjoy SWL'ing and scanner monitoring and so forth. Me, I'm into a lot of things - CB, SWL, Scanning, AMBC DX'ing, and ham radio as well.

I was an SWL, CB operator, and registered monitor long before I ever got a ham ticket. I know of some other guys who are hams who also happen to be registered monitors. Me...I'm a registered monitor who also happens to have a ham license.

I do appreciate the favorable comments from those out there who understand that radio is a multi-faceted hobby and that there are many different interests within radio for people to enjoy. As for the people who sounded off about my use of my monitor registry I.D., well...I'm not going to waste bandwidth replying to people who criticize something that they obviously know nothing about. :-)

73 and good DX'ing,
John D. Kasupski

<<me either, i think the rf police should just knock off their bullshit, stop wrecking the harmony that we CB'ERS could have here and stop feeding like leaches off the blood of the misery that they cause here. instead of comming by and picking the scabbs of the wounds that they cause. it would be nice if they would just let them heal, check their rf police badges at the door, respond to the CB RELATED posts that they like and ignore the ones that they don't instead of dumping more spam than hormell could make in a year on them and pretend to be professional in their demenor like an elmer to guide rather than a false god who looks like an asshole to everyone but himself.

OH, WAIT A MINUTE!!! WHAT TIME IS IT??? 4:20 AM!!! I MUST HAVE DOZED OFF. WOW, WHAT A DREAM!!! I DREAMPT THAT I HAD MISUNDERSTOOD SOMETHING THAT AN RF COP WROTE.
GEES, I THOUGHT, FOR A MOMENT THAT HE MIGHT HAVE AGREED WITH ME ON SOMETHING.

OH WELL, BACK TO THE NIGHTMARE.
GOOD NIGHT ALL.
JEFF>>>

Good Morning Jeff,

I just had an idea. What if you took some of that boundless energy and tenacity that you are using to keep the newsgroup a harmonious place, and apply it to 11 meters? Why not go after the jammers, the troublemakers, the splatterers, the idiots and the buffoons who are on the air in your locality making things miserable for all?

Actually, Dwight, the FCC was created by an act of Congress, which acted under its Constitutional powers according to Article 1, Section 8 of the Constitution to provide for the general welfare of the United States - in this case by regulating the use of a public natural resource (the RF spectrum).

About a month ago, I posted a lengthy summary of the constitutional issues and cited several instances of case law where the federal courts had upheld the constitutionality of FCC regulations. Basically, FCC's authority stems from the Communications Act of 1934, which the courts have of course also found to be constitutional.

We have a lot of people out here on Usenet who apparently have only a partial understanding of how our system of government, and our legal system, works. I've tried educating them in the past, the result has generally been a bunch of nonsensical ranting, obscenities, and flames, so I quit wasting my time...but if anyone cares to find out the truth, they can go back on deja.com and find the exhaustive case law cites and other information I have already posted, which documented quite a bit of information on how the courts have already ruled in FCC's favor in numerous instances. As for those who insist on maintaining that FCC is unconstitutional, I've chosen to let them continue to delude themselves if that is what they wish to do. Those of us who know better, are well aware that the courts have long since ruled otherwise.

> Article II, section 2, gives the President legal authority to create
>executive departments to assist him with the adminstrative aspects of
>government, and to appoint the heads of those various departments. The
>FCC clearly falls under the executive authority of the President, and is
>therefore completely constitutional.

Well, again, Congress created FCC, not a president...currently the President does appoint the five FCC Commissioners, which must then be confirmed by the U.S. Senate as is the case with other presidential appointees to various federal positions.

<<they have given these freqs up long ago. yes, they are still assigned but go unused. most of them are assigned as broadcast links below ch.1. how many news trucks do you see running around with 9 foot whips as their only transmitter antenna?
the ones above are mostly assigned for ittinerant businesses. today, a vhf / uhf business band radio system is easier to obtain than a 27.530 transmitter unless ofcourse they shop at antique shops and yard sales.
for these services, this is dead, wasted air that's cleaner and clearer than cb.
it's like the rancher that owns a ranch the size of new jersey and only owns 3 head of cattle. would he miss anything if a comparitivly few people stopped and took a drink from his rageing, mile wide river?
it may not be right but if he never looked, he'd never miss it except for the few assholes who try to dam and divert the river. (analogy to the mega watt splatter stations) if this were the case, i'd stand next to the rancher and shoot at the encroachers with him.>>>

This part of your philosophy I just don't agree with. CBers were initially given custody of 23 channels. They failed to self-regulate their allocation and the band became an anarchy infested by idiots.

Some 'serious CBers' felt justified in moving above channel 23 in order to "escape the idiots" because "23 channels aren't enough", or so they reasoned.

Luckily for them, the CB boom of the 70's came along, and the potential revenue seen by manufacturers prompted the FCC to grant the expansion of CB to 40 channels.

But CBers failed to self-regulate this new expanded allocation. The same problems arose with anarchy and idiots. This prompted the 'serious CBers' to again move above channel 40 "in order to escape the idiots".

So now freebanders ('serious CBers') are petitioning the FCC to grant another 23 channels (from 27.405 to 28.000) above channel 40.

What are the chances that, through lack of self-regulation, these additional channels will also become polluted?

Will you then need to "escape the idiots" by appropriating additonal RF real estate at 25.000 MHz (or some other frequency you deem suitable)?

It's like being given a house, trashing it, and then complaining that it's trashed. And then moving into the house next door (because no one is using it right now) until you can get the government to cede it to you legally.

I believe that if you are given a chunk of RF spectrum and then you turn it into trash-heap through your own neglect, you are not justified in crying about it. You are certainly not justified in moving onto frequencies allocated to other services "to escape the idiots" - no matter how abandoned these frequencies seem.

No, the power IS LOST! It's constantly
being converted into heat. If the swr is
3:1, then 25% of the power developed by the
transmitter is NEVER going to be seen coming

from the antenna regardless of how many
"trips" it makes up and down the transmission
line. You are wrong, Bob! If a high swr
is preventing any power from being absorbed
by the load, (antenna) it is lost in the form
of heat.....not to mention the inherent
damage being done to the output (PA)!

Jack

Hold on now, I am not saying anyone is stupid (just extremely lazy).

It is very apparent some people on this board have
no shame. To guess on how something works, making stuff
as you go is crap. I would have never believed the News Group
would be so much (exactly) like it is on the air, where most people
know little or nothing.

There isn't much to say, I agree with you on one point,
most do like it this way. People seem like they would rather
read this board than pick up and read some text-books on
radio and actually learn something (except the
screwdriver experts guide to radio burning)..

Well, I am off to cut my coax to 12' long, make my round
coils flat and spray Teflon on my TV so I don't interfere with it.

Bob.

hass@aznet.net wrote:
<<Wait a minute, I never knew CB retained self-policing after deregulation :).
>>

I appreciate that your comment was intended as irony.

But it does bring up another issue. Many will argue that it is the FCC's job to regulate CB - and that its users have no responsibility whatsoever to aid in this effort - and therefore it is the FCC's fault that 11 meters is continually in need of expansion to help the serious hobbyist "escape the idiots".

I completely disagree with this. In any society, cooperation is the key to an equitable sharing of resources. There simply aren't enough cops in the world to keep the peace if every citizen decided to destroy it. Likewise, no amount of FCC policing can keep CB a usable resource when its users universally ignore regulations intended to help keep it that way.

I must say that Dave Hall hit the proverbial nail on the head several times in his postings. A lack of personal responsibility by its users is the key to CB's troubles.

>product,
Wrong again Steve, if someone calls for your product you would hope the dealer
would try to sell them yours instead of pushing them into another unit.

>When something goes
>wrong, the team Davemade has to send email and make phone calls to get their
>buddies envolved to cover their butts so >they don't look so bad.
Who is team davemade? people have emailed me in the past after they have
inquired about buying an amp from you, they are not my buddies just consumers
who didnt like your sales pitch.Whether you like it or not it has happened.
Sorry cant do memphis I do the family thing on Thanksgiving. I know we again
will be the hot topic of your conversations at memphis though. I am not crying
you posted wht you did and i replied with what i feel are the facts

First of all! I don't think I'll go broke buying CB stuff but it could happen to you I'll give you my pity!

Second of all The Alernators dont fit and I said that already!

Third i never ran a 32 pill so I would not know what kind of bird watts but I promise to let you know when I read it off my dave made digital bird meter. That X-Force will never be able to copy.

Fourth I have some pretty big lee 8 volt batteries for the 32 pill And the m800 Will be on the 12 volt battery system. Both will be volted to the extrem.

It is amazing how they can put a man on the moon but can't figure out
how to deal with the clock/date changing to 2000. Now you know why
computer companies/software are so rich. They knew about this a long
time ago but didn't say anything because they knew the could make a
buck off it(should say alot of bucks).

  For 60,000 you would think that they
would teach you how to spell and form
sentences.  BTW, who built the web site?
  As for my being a truck driver, you had
better hope that I am not one, or you're
looking pretty bad right now!  I see what
you are "giving away" on your web site, If
you spent 60,000 for that, you got robbed!
  Is this how much you have to spend to
stupidly modify cb radios?  Pathetic!
  After looking over your web site, I
wouldn't be bragging to anyone about how
much I spent for my EDUCATION, technical
or otherwise!

Did Handy Andy actually write this? It is totally false.
SWR, "apparent" and otherwise, is a measurement of the standing
waves on a transmission line. There is no "constructive" or
"destructive" effect upon the SWR reading.

>   To determine Apparent from True SWR, you'll need to use
>   random lengths of coax for the patch cord of the SWR meter.
>   The change of the coaxial length in the overall system,
>   would change the Apparent SWR, while the True SWR will
>   not change.

Totally false. What he calls the "apparent SWR", the SWR measured
at the meter, is indeed the actual SWR at the meter. It is possible
for the SWR at the meter to be different than the SWR at the antenna
due to minor coax losses but this difference is generally small.

>Apparent, is like a point of view of an event.

>
>True, is based upon factual, or physical evidence of an event.
>
>Research needs to be done to determine if you are viewing Apparent or
>True SWR. So, the SWR really should be checked in at least, two
>points, or at the antenna, and a random length along the line. The
>differences, if any, give you the SWR at that point, and if it has
>changed from the antennas own SWR, you are then into a problem with
>Radiating coax, and the system suffers in performance due to it.

Standing waves are well understood and only one measurement is
needed along a transmission line. However, I won't stop your research.
It wouldn't hurt for you to research the work already done and the
knowledge that already exists.

"Stomp all over everyone". Pretty sad. This is why some "radio operators" buy large amplifiers. You know who you are.

To be louder than the next guy, as if what you have to say is any more important than what someone else has to say. This will be the epitaph that accompanies the death knell of cb radio as some of the more sane among us will remember it! Channel 6 operators are the epitome of the inanity of such pasttimes.

Another of many situations where the majority of operators will be punished for the stupidity of a select few.

But in an age where most people talk "at" people instead of talking "with" them, this should come as no surprise...................

Anyone who is interested in preserving what is "left" of the CBRS and would like to see some much needed changes take place must realize that the only way this can be done is to organize and band together with this as our common cause. It would seem to me presently that the best way to go about this would be to find a forum that is geared to this end and give it our wholehearted support.

In the course of our "busy days" it might behoove us all to check out the web site at:

http://home.att.net/~uscb_association/index.html

Here is an opportunity for cb radio operators around the country to have a say as to what happens to the CBRS in this country. To have a voice that the FCC will have to pay attention to, especially in light of their present policies!

Part of Bob's post is correct and the other part is correct only under
certain conditions.  Jack is correct only under certain conditions
```

(but these conditions are pretty typical).

The SWR measurement is basically a measurement of the percent of reflected power (as shown in the chart). This power is not necessarily lost. However, it is typically lost.

A typical scenario would be a CB radio with a 50 ohm output impedance. Reflected power would impinge upon this 50 ohm impedance an be terminated (lost).

Another possible scenario would be a radio with an antenna tuner on its output. This tuner could be tuned to make the radio/tuner output impedance equal to the complex conjugate of the input impedance at the radio end of the transmission line. At this impedance, reflected power is actually re-reflected back to the antenna. While the antenna still reflects the same percentage of power impinging upon it, that incident power level is now higher because it is now the sum of the radio output power plus the re-reflected power. The antenna now outputs a power level that is equal to the radio output power level. Thus, in this scenario, the power is not lost; no heat is created.

Funny thing about that...a couple of weeks ago, I visited that web site, and in fact, I applied for membership in that organization, and after submitting the application, the next page that came up said that the application would be reviewed and I'd be notified of the result.

Well, I never got any notification of whether or not the application
had been reviewed. I did notice that this morning, the USCBA
newsletter showed up in my mailbox, but they never did tell me if I
was a member of their organization now or not. This makes me wonder if
they are primarily interested in getting together a sizable membership
so as to be able to gain credibility in the eyes of the FCC, or if
their primary purpose is to collect addresses to send propaganda to.

> Here is an opportunity for cb radio operators
>around the country to have a say as to what
>happens to the CBRS in this country. To have
>a voice that the FCC will have to pay attention
>to, especially in light of their present policies!

The above SOUNDS good, I admit...but if the USCBA can't be bothered to
listen to the voices of those who apply for membership in their
organization, I have to wonder........

Doesn't make sense to me... Simple is to use a standart external HF radio power supply, or find something out of an old tube TV that would work, yep, they work...

You may know Silly's, but not the amps...

A sweep tube amp transformer was usually nothing more than a transformer pulled out of service or off the line of a radio manufacturing plant and put into an amplifier.

So, they would be the same.

I don't run the 200A... The rotor is a little harder to turn, and I typically see 202A at slightly over 18 V out of the 165 chassis.

If you are running the 200A version, you will be able to get by with three of them on your station, but using a TX800 to drive a 32 pill will be way underdrive anyway...

Anyway, your right... It is all opinion.

But I will still stand by the rule of one 365A alternator per 8 transistors. Always worked, and I can always hold max power... Either swinging forward, holding it at carrier, or max PEP on SSB.

You can do it with less, but you can't hold it with less.

step 1. remove power and antenna.
step 2. remove screws and open case.
step 3. locate rf board.
step 4. cut (white resistor) jumper located between D31 and 'c' wire.
step 5. reset the microprocessor.
step 6. reassemble the radio.

that should do it. piece of cake. even a ham radio tech could do it, that should make johnno kasupsi real happy. i just love it when a plan comes together,.......icm out....

RCi doesn't make them all...

Their is also Wireless Marketing to deal with.

The cheaper radios (shit Copper products, etc.) are made by them, and you also have the Ham International bunch made by Cybernet.

Then, their are a couple other manufacturers out their. Duf Sommerkamp also made their own line (produced them with no help of other people) for a while, but they where next to impossible to get stateside. I have only seen two radios, two models..... All Plessy Semiconductors inside, and used the MRF 454 for a final.

Ass kickin' radios, but hard as hell to get any information on....

And no, they are not the same as the Sommerkamp of today. Same company, different radios.

I hate to take sides,

But since you claim that it is so great, because you live less than a hour away from DG,

X-Force has been shipping and delivering in less time than that!

So, what does that prove?

Personally, since I don't sell CB, nor am I in the CB business, I could give a shit about who sells what. Dave's boxes are good boxes. I just have heard too much shit about having to wait.

Dave's builders have said that X-Force is a direct copy of the Dave design. If you can get a box, and not have to wait, and it is a direct copy, then why wait?

That was the whole point.

Built for CB Testing and Repair. This is a Leader LSG-227. Some features

are :
1) Center +1, -1 and adjustable frequency to +/- 5 Khz.
2) PLL 40 channel.
3) Mod Output 400Hz , 1Khz and 2.5 Khz.
4) Modulation adjust from 0 -100%.
5) Calibrated output from -110 to -10 Db.
6) Twin Meters.
7) ANL/NB Tester.
8) Delta , Led's , ect...
9) A bunch more.

Almost like the B&K 2040 except made by Leader and a tad smaller.

Can be seen at the top center of the picture at
http://home.mpinet.net/grassa

$275 Shipped.

Yeah, that was them, CRB. I circled their number on one of those reader service cards in PopComm once, about three years ago, and I'm still getting stuff from them in the mail (CRB, not PopComm). They do sell some pretty interesting books and stuff though, that you can't seem to get anywhere else.

> I was an SWL, CB operator, and registered monitor long before I ever
> got a ham ticket. I know of some other guys who are hams who also

Isn't that, like, sacreligious or something? :-)

> different interests within radio for people to enjoy. As for the

> well...I'm not going to waste bandwidth replying to people who
> criticize something that they obviously know nothing about. :-)

Hey, if they're that dumb that they can't tell a registered monitor ID from a ham call, why not point out how dumb they are? Maybe they'll be embarassed enough that next time they'll think twice before opening their mouths about something they don't know jack about.

I mean, three letters before the number...I'm not even a ham, and I'd know better than to waste my time looking in a ham callsign database for what is obviously not a ham call in the first place.

> KC2FNG, KNY2VS, KJK-14120, KSO-9650, AE279

Just out of curiosity...those are ham callsign, monitor registry, current CB call, old CB call, and sideband numbers, in that order...am I right?

As my site says I didn't not invent any of the mods posed there. I don't work on CB radios, I don't build AMPS, I don't write books or enter spelling contest.

It just so happens that many truck drivers don't have high education is that my problem no it isn't. But I have Many friends that are truck drivers and some are educated and even they joke about truck drivers. The purpose of my site is to educate my self in writing HTML, CGI, JAVA, and JAVA SCRIPTS. This Is what I do when I'm not writing C, C++, Perl.

The reason I bought the domain name is so I could share it with the people who appreciate free information and understand the finest things in life are not free.

Thanks Guys, I mixed up my connection order. I do infact have the ant tuner last. The amp i'm using is a small 225 blue. The antenna is a ABS1600. I like the antenna pretty well overall, but not keen on the fact its not tunable. The swr on the antenna is fair, and i realize that a 2 or lower is fine but I like my swr as flat as possible. Thats why I use a tuner Scott. When your running an inexpensive small power amp for a basestation I feel the lowest swr possible helps a little. Maybe not much, but a bit. The thing that I noticed about my 225 is that on low\high I get forward mod\power, where on med setting I get backswing according to my swr\power meter. Yes I realize these are mass produced, and not the best quality control but thats all I can afford.

Thanks to those who offered their 2 cents.

Jeff

Can some one explain why you can drive a 16 pill with a M400 and one 250 AMP alt.
But you tell me I cant drive a 32 Pill with an M800 and just two 250 AMP alts?

I know not every one finished college algebra, pre calculus, calculus I, and calculus II like I have done but this math problem is very simple come on.

If toll free or any one in this world can answer this question intelligently
I will never argue on this News Group again!!!!

Please Im all ears. I don't want to hear you cant run the 16 pill with one
250 AMP because me and two other people I live near peak 2,800 -3,000 watts
on a bird meter @15 volts higher @20volts no problem like this.

Greetings!

Unfortunately, the same could be said about todays CB radios.

For instance...

PC-122 from 89 era' lot's of parts. Fewer problems with marginal
voltage rated parts. You can find them.

PC-122XL - many parts removed, lower quantity of parts. Even changes
to the main PCB to lessen copper and reworked some sections to make
them stable, but fewer support components that can be found readily.

With a little work, these older chassis designs can do wonders for a
itty bitty radio like those PB-122 chassis designs. Heck, they still
have the holes for the parts they took out!

As far a Cobra, well, I'm not going to tread there. Their mfgs' are in
too voltaile of areas that need stable democracies. It's hard to find
good help.

The best answers to the "charge for it versus fixit yurself'" is;

locate a book or two about radio,
read the mods out on the 'net,
acquire as many schematics as you can,
buy junk radios to help you find and locate parts,
Time - lots of it,
Patience - you'll need it,
Intuition - hey, everybodys gotta' learn,
Stamina - broken radios will test you. ;-)

Greetings!

While Dancing with the Mouse on Tue, 09 Nov 1999 16:39:25 -0500, the Modem interrupted with an MNI from "anylength@willdo.com (Coax Length Police)", and the MotherBoard buffered this to Video RAM:

:+> Standing waves are well understood and only one measurement is
:+> needed along a transmission line. However, I won't stop your research.
:+> It wouldn't hurt for you to research the work already done and the
:+> knowledge that already exists.

Wow!

Are you a Ham operator?

I think you need to read up on the research.

Hint:
Z = ...

What happens then, when Z of the antenna, is different than Z of the coax?

Another thought process...

Known feepoint impedance, to match the known output impedance. What occurs when both differ?

How is coax used as a balun?

Why are multiples of 1/4 wave, thru the use of coax, offer different levels of SWR, when the feedpoint impedance is known to be far off?

Apparent versus True. Is it characteristic? Both can apply to the latter.

Now, apply the above thoughts to dipoles.

The common denominator is with coax and various lengths.

You have the coaxial impedance at any given point, and feedpoint impedance throughout the whole line.

When Zcoax <> Zantenna = what is the equation? It's R-jX or R+jX?

What occurs when -jX and +jX summed together, approach zero?
How can that be accomplished?

The biggest hint is a dead giveaway...

It is known that open ended coax, when trimmed to varying lengths, offer varying Z from nearly Z=0ohms to Z=infinite.

Now, apply an antenna as a tuning stub to this...with it's own R+/-jX

We should now have a pretty good idea as to how coax can either act as a mere conductor, or react as if it were part of the antenna.

Do you agree?

```

Hi, I have a Johnson Messenger 100 mobile forsale. It has channels, A, B, C, D, AND E in it. Do not know if it has any crystals in them. No way of testing, no power cord. Comes with original mic. I'll take $8 plus shipping. Also, I have a Johnson Messenger III, it also comes with original Johnson mic. Has channels A, B, C, D, E, F, G, H, I, J, K,and L. This one does not come with power mic cord.I'll take $8 plus shipping. All are untested, cause I do not have any crystals to test them. The Johnson Messenger 100 was REALLY dirty. I cleaned it up REAL GOOD. The Johnson Messenger III has alittle scratches, but nothin bad.

Also, I have a Johnson Messenger II (Blackface) forsale. Has 10 channels. channel 9 crystal is the only crystal in it. It has no mic. So I can't test it. Has all the tubes in its slots. I'll take $25 plus shipping. Also, I have a Johnson Viking Messenger (Whiteface) forsale. Has no power cord. Comes with mic, but it's not wired. It has a four pin and the radio. Mic comes with plug. Has all the tubes in its slots. Has no crystals. It has been repainted because of old age. It looks REAL NICE. I'll take $15 plus shipping.

Email me if interested.
For all = Johnson Blackface- $25
Johnson Whiteface- $15
Johnson 100- $8
Johnson III- $8
All together = $56 plus shipping
Or buy at a time... Buckaroo "223"

I just realized that if you are changing the connector on the microphone you should be able to identify the microphone sheild visually anyway.

Rock-on!

Hi,

I need a part for an old DRAKE TR-4C transceiver
made in the sixties. I know some companies still
produce this part today but I couldn't find out
who and where to purchase from. Could anybody
point me to the right contact?

It's R10E1-Y4-V2.5K 48V DC AMF for TR-4C DRAKE.

Please reply to kaijiang@stanford.edu

Thanks a lot.

Regards,

Kai

Could anyone out there be so kind as to tell me a place to get the schematics / manual for an Eagle Mark 8 Tube Linear (I think it may also be known as an Eagle 1000, but I am not sure)? It has a Simulated wood grain finsih, lit switches, and uses (7) 20LF6's. I am pretty sure it was manufactured in the early eighties or late seventies. Also could someone fill me in, Is this linear made by a company named Kenrich? If not who?

Thx a lot for the help, it's greatly appreciated!

I said intelligent explanation. Instead of telling me what wont work tell me what you think it takes to work. I have had a ton of arguments saying that you cant do it that way but no one ever says how to do it the right way then.

I run a 16 pill with 1 250 alt. and it also peaks at 2800 to 3000 watts.I do have several batteries in the bed that help quite a bit.Btw those numbers are at a steady 13 volts.After keying for awhile though it does drop to about 2400 or so.It does need another alt to hold the volts but not bad for a daily talker!Im still looking for you Ice!!!

Hi Ron. I guess the road map I sent you did not do the trick for you eh?
I hop[e you can find what you are looking for. I have never seen that kind
of a butcher job before. Mine was neat with just 2, 2 position switches and
looked very professional.

best of luck.

Nah, nobody could really be that dumb. I think it's just a case of
somebody looking to provoke an argument...and in this case they are
REALLY reaching to try to do it, but I ain't giving 'em the
satisfaction of arguing with them, which irritates 'em even more. :-)

73 and good DX'ing,

I think this is a reflection of society as a whole. It's the old "don't wanna get involved" syndrome.

In New York City a few years ago a woman was murdered in front of a whole bunch of people and nobody even called the cops. The same people who do things like this probably also gripe about how high the crime rate is in NYC and whine that they are afraid to go out at night.

This reflects an unwillingness in our society for people to take responsibility for their own actions. It's easier to find fault with someone else.

The people who have to eat Kraft dinners every night instead of meat and potatoes because of exorbitant taxes, insurance rates, utility costs, etc. blame the politicians for all their problems, but God forbid that any of them should actually go to the polls and participate in the electoral process themselves. Why, they might find themselves branded as an "establishment lackey" or something.

The people who are afraid to go out at night because of high crime rates in their neighborhoods blame the cops and the courts for the conditions where they live, but God forbid that they should ever actually pick up a phone and call the cops when they see a crime in progress, or sign a criminal complaint, or go to court and testify. Why, they might find themselves branded as a "narc" or something.

And the people who gripe about the state of the CB band today, well, God forbid that they should actually make an effort to find out who some of the offenders are and report them to FCC. Why, they might find themselves branded as "rf police" or something.

We have a situation in our society today where the emphasis that we had, say, 30 years ago on the individual being held responsible for his or her own actions has been diluted to the point where we have now raised an entire generation of people that has absolutely NO sense of responsibility for their own actions. Almost an entire generation of people grew up with no respect for their parents, their teachers, the law, or even themselves. It used to be that if a kid got too far out of line, the result was that they got expelled from school. Nowadays the public schools can't even do that. The ACLU and other bleeding-heart liberal organizations like it filed lawsuit after lawsuit, until now we have a situation in the public schools where a teacher can talk about every manner of sexual topic imaginable...as long as they don't dare bring up the subject of God in a classroom.

Ever wonder why all these shooting rampages in schools happen in public schools and not in private or parochial schools? It's because the private schools can still expel troublemakers. They have the stick to go with the carrot. They can - and do - back up the authority of the teachers and faculty members, which the public schools can't. Thus, their students at least learn some sense of being responsible for their actions...learn at least some respect for authority. People blame the NRA for all these school shootings and such...they ought to be blaming the ACLU instead.

And yes, a lot of people blame FCC for what happened to the CB band after deregulation and the end of licensing on that band...but you know, nobody from the FCC ever fired up an illegal amp on that band. Nobody from the FCC ever modified a radio to transmit on unauthorized frequencies. And nobody from the FCC ever organized a keydown, or drove around town playing music on top of people's conversations, or interrupted a QSO between two people they don't even know to question the moral character of the parentage of one or both of the participants in as obscene a manner as possible.

It wasn't FCC who did any of those things...and it wasn't FCC that failed to file a complaint with the proper authorities when that type of behavior was observed on the band. Now, if someone behaved that way on one of the business bands, or in a public safety band, you can bet your bottom dollar that the phone would be ringing at the nearest FCC Field Office, possibly while the offender was still on the air. But on the CB band, for some reason, people stopped doing that some 25 years ago, and that's the reason we have the mess on CB that we have today. As the saying goes, if you aren't part of the solution, you're part of the problem. But if you think about it, the people who populate the CB

band are pretty much a cross-section of the people who populate our
society...so why should we be surprised that the problems that plague
our society today, also plague the CB band?

73 and good DX'ing,
John D. Kasupski

Toll free did you Ever hear of ohms law? (Voltage = Current X Resistance)
When you raise the voltage to lessen the
current!!! Or did you prove the law
of physics wrong? Do I need repeat that I have A Diploma as an Electronics
Technician, An associates as An Electronics Engineering Technician, And In a
Few Weeks I will have a bachelors of science In Engineering? I AM NOT SAYING
IM A GENUS BUT YOU ARE NOT TALKING TO A ELECTRONICS ILLITERATE, JUST A BAD
SPELLER AS MANY OF YOU TELL ME!

>What does the screen name that is used have to do to the truth that is
>posted.

You should have been a movie star with the roles you play.

>Wrong again Steve, if someone calls for your product you would hope the
>dealer
>would try to sell them yours instead of pushing them into another unit.

We did, just never had many calls like you think, let the ego go! We were known for the X Force products.

>Who is team davemade? >

People who for some reason come out of the closet when davemade is in a bind.

> People have emailed me in the past after they have
>inquired about buying an amp from you, they are not my buddies just
>consumers
>who didnt like your sales pitch. >

Due to the fact that they would have to wait 2 to 4 weeks for delivery. Sure you would say no way, but the proof is in the receipts. Our sales ratio is 8 orders for every 10 calls. Humm, this is only due to the way we have taken care of business. Went from two employees working to now 15 employees and we just hired yesterday and today.

>Whether you like it or not it has happened.>

Not a problem here.

>Sorry cant do memphis I do the family thing on Thanksgiving.>

We will do the family thing as you call it and then do it again in Memphis, Happy Thanksgiving to you any way.

> I know we again

will be the hot topic of your conversations at memphis though. I am not
>crying
>you posted wht you did and i replied with what i feel are the facts>

No there will be better things to discuss than Davemade products or you! As
for facts, do you really want facts, dont think you do. They may be
detrimental to you. Have a great day.

I guess I have to take your word as like I said some where before I don't build amps, and if it breaks I wont be the one to fix it. Yes I could replace parts by myself, yes I can build a box by looking at some one else's buy why bother? There are many people who build wheels but only one inventor. this kind of gets off the subject but how cares I see allot of that on this ng

Im not one to take sides and am not going to do so but my electrical system IS too small for my boxes!It takes sveral minutes for my batteries to charge back up before I can see the 3kw again.I just have to remember my limitations!!Hell,Prime was surprised I could get that much out of it!!

Greetings!

Let me know when you've tried the links.

And what kind of radio are you using?

Much of the "noise" problem stems from what you're up against.

```
Company Car - can't touch it.
Auxillary Power - not sure of the power supply, if it's clean.
Antenna - Although small, shouldn't a big problem. Relocating the
       antenna is another choice to see if noise goes down.
Radio - Noise rejection, kinds of filters the radio uses.
     Theres' a difference between a Pro510XL vs a Cobra 29,
     a simple Hand Held "HELP" radio versus Mobile.
```

So many different choices. All are inter-related to the problem you have with noise.

Not a simple fix.

While Dancing with the Mouse on 09 Nov 1999 08:28:14 GMT, the Modem interrupted with an MNI from "cgo2541273@aol.com5200 (Charles Golden)", and the MotherBoard buffered this to Video RAM:

:+> actually I am using the aux power under the driver seat.
:+>
:+> >And since it's a company car, I take it you're using the Cigarette
:+> >Lighter for power...
:+>

Could you please tell me what radio shops that work on
CBs there are in about a 50-mile radius of
Washington DC, and if possible locations or
phone numbers?

Please post to the list. Thanks

Hey Stupid,

We are talking about "TYPICAL" applications. CB radios have an output impedance of "50 ohms"!

We are all in a newsgroup called "rec.radio.cb"! Get the picture? No special cases are being discussed here! Energy can neither be created nor destroyed. The test scenario is this. The swr at the feedpoint of this antenna measures 3:1. The chart says that at a 3:1 swr the percentage of tx power being absorbed by the load (antenna) is 75%, or 25% of the tx power is lost.

Now, given the information above,

If it wasn't converted into heat, one of you tell me where the 25% went? I want to know why I'm replacing final transistors in these radios due to damage from operating them into grossly mismatched antenna systems. If it isn't heat, then WHAT? I'll tell you why. Because operating this equipment into poor excuses for antenna systems with high swr's BURNS UP the final transistor. If you still don't believe me, you moron, then try this!

Hook up your cb radio and operate the transmitter with no antenna, (an extreme exaggeration, hoping you're not too dense to understand) and hold a finger on the heat sink and tell me what you feel! DUH! feels like heat, don't it! Well stupid, that's where all of your reflected power is going!

Jack

Then why does my RG-8X get hot when running an 8 pill into it with a shitty
SWR, but runs with no heating when the match is terminated into a dummy
load, perfect 50 ohms?

For reference, the coax usually gets the brunt of the absorption.. Not the radio, and not the antenna. Usually it is the coax. However, to prove a point, please read on:

. If it isn't heat, then WHAT?

>>>>It is actually a high RF voltage that is breaking down the junctions of the transistor.

I'll tell you why. Because operating this equipment into poor excuses for antenna systems with high swr's BURNS UP the final transistor.

>>>>Not burns it up, per se, more like develops a high RF voltage that will puncture the junctions of the transistor.

If you still don't believe me, you moron, then try this!
Hook up your cb radio and operate the transmitter with no antenna, (an extreme exaggeration, hoping you're not too dense to understand)

>>>>Actually, this will work, and their will be no problem. Most transistors are rated at 30 to 1 SWR, at all phase angles.

>>>>I have done this. It was on a Cobra 29 and a 148. Both radios worked flawlessly.

>>>>Unless you are completely overdissipating the transistor, nothing will happen. Keep the carrier to the level prescribed by the manufacturer, and you have nothing to worry about.

and hold a finger on the heat sink and tell me what you feel!

>>>>And if you would really like to feel things getting a little warmy, try touching the caps and inductors in the tank circuit! That eats up WAY more RF energy than the "finals" will!

DUH! feels like heat,
don't it! Well stupid, that's where
all of your reflected power is going!

>>>>If you would like to prove what I just stated, here is a simple test that will show you exactly what is going on, and will also let you save your radio in the event of an antenna or amplifier failure.

Take a zener diode, rated at 16 to 18 volts, 2 watts, and run it from the collector of the transistor (directly to the collector, not after any bypass caps) to ground, observing the proper polarity.

Now, key the radio up and enjoy.

If you would like to see the fuse in your radio pop, screw up the match.

The resultant high voltage will hit the avalanche point of the zener causing it to begin to conduct. Because this diode is also shorting out the DC supply line to the transistor, it will short the radio, blowing the fuse!

This can also be applied to amplifiers, you just have to use larger zeners, so they will be able to pass the current in the event of an amp failure. It will also let you see if someone is volting your amps, or if they are getting power spikes on startup or something else.

Enjoy. I just taught you the cheapest and best VSWR protection circuit.

Guess you don't want to use a high Q antenna (which provides the most
effeciency) with a radio that has a lot of channels, do you?

Toll Free

That is not true, either.

If that was the case, then you could put the antenna tuner anywhere in the line, and it wouldn't make a difference.

Somewhere along the line, it became convenient for people to tell others that it just gets rereflected until radiated.

Folks, this isn't the case.... Otherwise, transistors wouldn't be overdissipated when run into a high swr, amp units wouldn't get hot, and coax wouldn't get warm.

You can hope all you want... Unless it is a tuned line, the power won't get rereflected... It will get absorbed by something.. Coax, antenna and output network.

it would go to antenna first, then amp, meter, and radio I think

Prozac, you dont have to worry about me going broke, I already have spent
the dough, I have 5x 270's on my truck big brother,already have 32 pills and
then some and I am not impressed at all about your davemade bragging, When
you get yourself to the point where you feel like your talking then you can
pull to the line and we will see what you got! And as far as the "Digital
bird meter by Dave" yeah you let us know what it does, Man I done been
there, point is when you get this stuff and get to talking then you can
legitly talk shit, until then why dont you shut you pie hole!

In my experience I agree as well, I was once told I could efficiently run
8x2879's on a 165, I found out if I run the key up and held the bird still
(no forward or backswing) that I would lose voltage, this was caused by not
enough alternator, I also know that I could not effectively run 16 pills on
a 270 and not lose a little bit of voltage, That test being done with a 2
2290 x 6 2879's for a driver with the driver @ 16 volts and the 16 pill @ 20
volts, but as you said its just opinion.

I don't need to explain, its obvious that if anybody could calculate the
load it would have to be you, I know that for keying on your locals and
talking across the river you probably can get away with this no problem, but
in my experience I would have lost volts.

Who the fuck said I'm DXing 27.555? And when did I say anything about me
getting a kick out of breaking the rules?

Assumption, folks? Assumption! You don't even know me. Hell, you only
know what I want you to know.

For all intents and purposes, all the postings from you HAMs are just
another great asinine attitude of Americans today. Fucking ASSUMPTIONS!
And you (yes you... John Jenkins, Dwight Stewart, AB7RS, etc) HAMs are the
American epitamy of our great country falling the fuck apart. But this is
another story.

FUCK YOU VERY MUCH AND HAVE A SHITTY DAY!

The Mura mic is the same as the Midland power mics of the day.

I used to have a Mura DX-116 power mic. Not a bad mic, especially when run
into a clean radio. Clear audio, good amp section.

I picked this big pig up a couple years ago and am eyeballing it again. I am considering fixing it or getting rid of it. It worked last time i plugged it in, (1997)and had the big caps and a few other parts in it replaced right before i grabbed it up cheap. The previous owner got rid of it because he either gave up on it or got sick of the thing..It did about 800w or so when i last had given it a rip, but it needs a looking over by someone who sticks their fingers in tubesets for a living :)
Anyone in the central Connecticut to southern Massachusets area that is interested in repair estimates or buying it can mail me at GMpartsguy@msn.com , i dont think id wanna mail this thing anyway..hehe
See ya on the air

O.K., let's look at this mathematically.

If you are running a 2SC2879...

You have to run 12.5 volts on the collector, because Toshiba tells you that you have to... And at that voltage, they are rated at 20A input.

As you volt the amplifier, you increase the current dramatically (if you would like proof, look for Professor's ramblings on it last year... He tried it and reported it), so we will look at the average power draw, just remember, as you bring the volts up past 14 or so, the current pull goes WAY up.

The numbers above are for an optimally designed network, running class AB bias. If you take the cap values of the dave and other battle boxes, you will see that they are geared slightly low so they don't draw as much peak current at the higher voltages, and they are run class C, so they have slightly better efficiency. However, this will only give you about 14 volts or so that you can run.

Now, 20A per transistor.

8   X 20A = 160A
16 X 20A = 320A
32 X 20A = 640A

Factor in the driver (and if you think that a good running 4 pill won't draw

80 or more amps, you better think again! My 4 pill will blow 3X25A fuses with just a little bit of long windedness.) and you are well over what is needed.

Can you get by on less? Of course. I have run a 16 pill on a single alternator before, just to test. I was able to get 6Kw out of it carrier, but after about 10 seconds, the power was down to 4Kw... And that was all because of the volts falling off, because the batteries lost the top charge, because their wasn't enough alternator!

I can also run my 16 pill with a single alternator, but I can't get long winded with it. However, the current draw from my alternator is humongous, and the thing is sitting over 150A all the time (I have 450A shunts on my alternators, so I can monitor each alternator, or all of them cumulatively to see the total draw). However, when running the 8 pill, the constant current goes down to the 50 or so amp level, and the voltage is at or above 16.5 volts. However, when keyed, it is pulling 200A or more (depending on the case temperature of the alternator.. This is another variable to watch... If you keep the alternators cool, they put out more amperage, but when they heat up, and you are still stressing them, they will drop in amperage, as well as begin a self destructing process).

Your batteries should only be their for supplying peak current, and not for the buffer of a underfed electric system. That is what you are looking at doing.

If you have any other questions, please feel free to ask. I hope this helps, and shows you what is really going on.

Yes, thank you.

He told you the same thing that we are. He loses volts with an too-small electric system.

This may be true when changing the taps on a XFMR or the windings in a
motor, but this is not true when you raise the voltage to the 2879's, if you
do not believe this you can test for yourself. When you change the taps on
the windings of a motor you are still producing the same horsepower, you are
just changing from a series winding to a parallel winding and visa versa,
this is done on a XFMR by changing the taps to achieve a different ratio.
But if you take a 100 watt light bulb at say 120 v on a variac and increase
the voltage you will notice that the current will increase as the lamp gets
brighter, this is the same with rf transistors when we increase the voltage.
I am not trying to prove you wrong, break out your OHM's pie and do the
math.

FWIW, my Connex 4800DXL is the best radio I've ever had. Good receive, loud
modulation, stable SSB, and pin drop clarity on both AM and SSB.

Hey Toll I agree with this 100%, and the further above battery voltage you
attempt charge the higher the current draw on the alts, and the more batts
the more current draw required when you increase the voltage above the

batteries idle volts, If he were to run the cap bank he would realize how
much of a voltage drop was really occurring.

I have run a 16 on one 250 of course 2 would be better but i didnt see a big
change in watts when the 2nd was turned on , figure 250 amps x 20 volts =
5000 watts of power the alt can produce 50%eff would give you 2500
watts,60% would give you 3000 rms not a real bad figure for a 16

I am looking for the parts to add 17/12 to my early (s/n 04xxx) Yaesu
FT107M. Does anybody have a dead/dying late model rig s/n 06xxxx+, or an
early one with the RF and LOCAL boards populated in the AUX positions? Maybe
an original Yaesu WARC kit? Also seeking the beige face VFO and transverter.

Hello Mr. Strohm,

My original statements had to do with a post elsewhere in this Ng pertaining to a customer's lack of understanding as to why things cost what they do even though the customer perceives the work to be minimal and trivial.

My mistake was in not replying to that particular post and going ahead with a new one. My faux pas.

The gist of it had to do with the price of retuning a radio. The poster seemed to think that the tech was just gonna go in there and turn a screw or two and call the unit tuned. This wasn't to do with deciding to replace a defective unit or repair it.

Although I think you misinterpreted what I meant and posted with a different thought, I would like to reply.

I agree with you in that there comes a time when repair might be the least cost effective for the customer even though the end result is the customer would pay a tad bit more for a new/newer piece. Under these circumstances I always let the customer decide if the repair was worth it without trying to influence them into an upgrade...unless I had a very strong feeling that the radio was on it's last leg.

As far as taking trade-ins towards newer gear. The markup on what I sold did not leave room for negotiation nor trade-in allowances on equipment that I would not put back out for sale.

You see, if I told the customer he had a radio that was not worth repair, I meant it. I never took a trade in under those circumstances because I wouldn't put that radio back on the for-sale shelf. If I allowed such a trade, I would not make the correct profit on the sale and I would have to work twice as hard to recoup that loss.

Going a bit further on the trade in thing. I never did like to take a trade because I felt like I was screwing someone. In order to make a profit on the trade I had to low ball the value of the unit even though it was an ok unit. I know the customer had a good idea of what he could get for the unit on the market and I felt like I was insulting them with my offer. I know what it's like to trade in vehicles and how much I hated hearing your car isn't worth what you think it is. I just didn't want to lay those feelings on my customers.

Now, to the people out there who don't understand what goes on behind the scenes.

In the world of "Real" Electronics Technicians there is a certain satisfaction that only comes from a job well done. That means having some pretty sophisticated and expensive test equipment to verify your measurements, adjustments and repairs. Just to give you a clue what just one indispensable device costs. How about $12,000 to $20,000 for one piece of test equipment.

If you really know what you're doing you can oft times "get away" without the fancier pieces of gear but this degree of knowledge only comes from great amounts of experience brought about by using the fancier test gear. To "get away" without the fancier stuff you need to have a real understanding of the consequences of your part changes and adjustments and you need greater skill in interpreting the very subtle indications of the "make do" test equipment that you {are} using.

Does anyone realize the cost of the test equipment and what price you have paid for your experience? Not really. The customer doesn't have a clue and doesn't really care. All he wants is the best radio performance for his money and rightly so.

What customers do need to realize is that we have a tremendous investment in ourselves and the equipment that we use and we do deserve to make a reasonable profit from each of these. As

customers, you need to also realize that it is only through great
amounts of experience that we can make the repairs, modifications
and adjustments look so easy.

So for the next time you get a glimpse of something that looks
too easy you can bet your ass that we paid our dues learning how to
make it look that easy.

Translation: You have no problem with anybody expressing their opinions here, as long as they agree with YOUR opinion, otherwise they're clay-footed gods.

> you DO have a right to, here comes that key word again, DISCUSS out-band
> issues. but if you, as a ham, can't go into the out-bands and we, as cb'ers,
> are willing to suffer the consequences for doing so. WHAT IS YOUR BITCH ABOUT?

Maybe it has something to do with the fact that a lot of the hams in here are also CB operators, and get sick and tired of other hams AND the general public painting them with the same brush because of the actions of morons like YOU that can't be bothered to obey a few simple rules that specify where we are allowed to operate and how much power we are allowed to use. I'm a Cb'er and I operate legal power on the legal channels. I'd like to see the band free of people like you with your illegal amps that cause you to interfere with comms several states away that you can't even hear to know you're interfering with someone else because you're too busy blabbing to hear anybody else.

You bitch about other people's attitudes in here...you're the one who needs an attitude adjustment. Your behavior on the CB band and your encroachment on parts of the RF spectrum where we as Cbers are NOT supposed to be transmitting...you jerks are the reason we will probably NEVER see any further authorized frequencies, or get the FCC to let us legally use FM on the CB band. You and people like you screw everything

up for everybody else...and you could care less what effect it has on
anybody else's rights or privileges. Screw you!

> YOU TOO want this right so dump the horse shit rightious attitude. it
makes you
> look like an idiot.

I've seen enough people in this newsgroup call you an idiot, too...and
other things. After lurking here for awhile, I can see that they are
absolutely right. You are one of the biggest jerks I have ever seen on
Usenet. But you don't need anything to make you look like an idiot, all
you have to do is be yourself.

Who's causing the wounds? There wouldn't BE any misery on CB if
peabrains like you obeyed the rules and stopped ruining the band for the
rest of us.

nice if they
> would just let them heal, check their rf police badges at the door,
respond to

don't instead

Yeah, sure, I'm sure that you and the rest of your hoodlum buddies in here with no respect for the FCC regulations and no respect for the other users of the CB band would just love it if us LEGAL users of CB just shut up and went away and let people like you go right on polluting the airwaves with impunity. But guess what...that's NEVER going to happen. So take your illegal amps and your non-type accepted radios and shove them in there where they belong. I don't think you need to be told where that is since you seem to spend most of the time in this newsgroup with your head shoved up there anyway.

> of dumping more spam than hormell could make in a year on them and
pretend to

> who looks like an asshole to everyone but himself.

To me, and probably also to the rest of us in this newsgroup who operate legally, it's YOU who likes like the asshole. I'm acquainted with several hams, and I doubt if any of them would find the likes of you worth elmering into a hobby they enjoy so much. At least not until you showed that you were capable of paying attention to not-so-minor little details such as considerate operation, and paying attention to the rules you're supposed to operate under.

Yeah, go back to bed and dream about operating on 27.555 MHz - which none of us will ever be able to do LEGALLY thanks to idiots like you.

Could be it's lucky for you that you don't live near him. How do you
know he's not a former Navy SEAL who would fold you up like a newspaper,
dump you in the middle of the street, give you a good swift kick in the
butt and then stand there laughing as he watched you roll downhill into
a pile of trash where you belong? Or maybe he runs a karate school, and
you wouldn't get anywhere near him because there are two dozen of his
students that could wipe the floor with you without even breaking a
sweat, never mind what their instructor who is half a dozen or so
degrees higher in rank could do with you. So what are you trying to do,
make the guy laugh himself to death?

Actually, I think it was a company that advertised in CQ, not the
magazine itself. The same company advertises in pretty much all the
radio magazines.

> I doubt, that there's any harm in being or continuing to use the

The funny part of it is, the guy they're bitching about *is* a ham. He
posts his ham callsign, his registered monitor ID, his CB callsigns past
and present (or so I assume that's what the KSO-9650 is), and his
sideband numbers in his signature file. These jokers are just plain too
dumb to tell one from the other, I guess.

Just as the books will state that a 1/4 wave is the most efficient mobile
antenna, that in no way would a coil antenna EVER outperform a straight 1/4
wave, doesn't make it true in radio...real world application. Same goes with
all the theory you've learned in your many years of education, that normally
using a "rule of thumb" that VxA=W, by increasinc volts you decrease amps, not

true in amplifiers in the REAL WORLD.

You're not talking sense here.
How do you figure it wouldn't make a difference?

> Somewhere along the line, it became convenient for people to tell others
> that it just gets rereflected until radiated.

As I said (and you conveniently clipped out), typically the power does not get rereflected but, with proper tuning, it can. How do you think an antenna tuner reduces your SWR reading? What happenned to that power that is still being reflected at the antenna? Answer: it is being rereflected.

> Folks, this isn't the case.... Otherwise, transistors wouldn't be
> overdissipated when run into a high swr, amp units wouldn't get hot, and

You've given us a bunch of non sequiturs here. Answer my questions from my last paragraph and stop snipping out relevant portions of my posts.

> You can hope all you want... Unless it is a tuned line, the power won't get
> rereflected... It will get absorbed by something.. Coax, antenna and

Oh, so are you now saying that the power can be rereflected? Then, how can your last paragraph be true?

I'm thinking about getting a cb radio and i was wondering just how well channel 9 is really monitored in case i were to assistance on the road. Since cb's are cheaper than cell phones i figured it would be a good thing to have for my drive to college and back. Any input would help especially about monitoring in NC.

Thanks,
Jeff

Apparently something along those lines must have happened.

In the newsletter-bearing e-mail, I found user name and password for how to get into the members-only section of the USCBA web site, and upon making use of that information, availed myself of the members list and found that I am on it. There are another dozen or so people on it after me, so maybe they processed a whole bunch of people at once just before the newsletter went out and saved some time by just sending out the newsletter by way of notification.

In any event, this is USCB-53, 10-10.

73 and good DX'ing,

So, are you saying that antenna tuners are atypical?

Also, you said, "If the swr is 3:1, then 25% of the power
developed by the transmitter is NEVER going to be seen coming
from the antenna regardless of how many "trips" it makes up
and down the transmission line."

This is simply not true. You *are* wrong. All of the transmitter
power can be made to radiate from an antenna even with an SWR of 3:1.
It was explained how this can happen. I understood the explanation.

> We are all in a newsgroup
> called "rec.radio.cb"! Get the
> picture? No special cases are
> being discussed here!

An antenna tuner is a "special case"? Every Radio Shack
sells them. They are very common.

> Energy can neither be created nor
> destroyed. The test scenario

Lost where? The antenna isn't getting hot. As you said,
power cannot be destroyed. Where did it go? Answer: it
was reflected (not dissipated). That reflected power does
not necessarily get converted to heat.

> Now, given the information above,
> If it wasn't converted into heat,
> one of you tell me where the 25%
> went?

I told you. It was reflected.

> I want to know why
> I'm replacing final transistors
> in these radios due to damage from
> operating them into grossly mismatched
> antenna systems.

It is because you don't use an antenna tuner to
rereflect the power. If you read the message and stopped
name-calling, you would understand.

> If it isn't heat, then
> WHAT? I'll tell you why. Because

Your reflected power *is* being converted to heat in
your finals -- but it doesn't have to be. An antenna
tuner would rectify your problem.

Toll a dm - 5 pill will draw 53 amps at 15 volts into a 50 ohm load. Holding 400 rms watts. I do agree 15-20 amps max per device when in key down mode. Ohms law still comes into play 250 amps x 20 volts = 5000 watts of power created - Efficency = watts

> As you volt the amplifier, you increase the current dramatically (if you would like proof, look for Professor's ramblings on it last year... He tried it and reported it), so we will look at the average power draw, just remember, as you bring the volts up past 14 or so, the current pull goes WAY up.
>
> The numbers above are for an optimally designed network, running class AB bias. If you take the cap values of the dave and other battle boxes, you will see that they are geared slightly low so they don't draw as much peak current at the higher voltages, and they are run class C, so they have slightly better efficiency. However, this will only give you about 14 volts or so that you can run.

Jeff. The ARRL has certainly taken a beating from you
in this NG. I was wondering if you have ever read any
issues of QST, or the ARRL handbook, or any of their
publications. I have found nothing in any of them to
even hint at the kind of treachery you suggest. I do
however find things like "The Amateurs Code",
written during the early days of ham radio.
Admittedly, it is somewhat 'quaint' in
the light of today's more cynical society, yet the
ARRL still publishes it quite unashamedly in
their handbooks.

I re-read it the other day. It does not sound to me
like the marching orders of a totalitarian organization.

Of course, not all amateurs embrace the qualities
written below. But what's so bad about an association
that publicly urges them to try?

(From The ARRL Handbook)

"The Radio Amateur is:

Considerate... Never knowingly operates in such a way
as to lessen the pleasure of others

Loyal...Offers loyalty, encouragement and support to
other amatuers,local clubs, through which Amateur radio
in the United States is represented nationally and
internationally.

Progressive... With the knowledge abreast of science,
a well built and efficient station and operation above reproach.

Friendly... Slow and patient operating when requested; friendly
advice and counsel to the beginner; kindly assistance, cooperation
and consideration for the interests of others. These are the
hallmarks of the Amateur spirt.

Balanced... Radio is a avocation, never interfering with the duties owed to family, job, school, or community.

Patriotic...Station and skill always ready for service to country and community"

THE NEW EAGLE V111 (8)
These are made by a party down south that has access to all the leftover chasis and parts from the early Eagle 200 , 500 , 515 , he sells these amps which are really the original 515 but with a preamp and no cw , get them while you can only a few brand new ones left and they are very nice but pricey .

Andy:
Stay on the original subject for once. How do "constructive and
destructive" standing waves that occur along the coaxial line
vary the "apparent SWR"?

The Coax Length Police seem to disagree with your claim.
I do, too.

Well, if you can point out some specific research that supports your
"constructive and destructive" claim, I'll look at it. But I'll
guarantee that there is none.

I would respond to this if there were a coherent question there.
You seem to be rambling.  Your thought processes seem drug impaired
at the moment.  Try again in the morning to piece together a meaningful
paragraph and question.

Jeff,

Channel 9 is not monitored too well in most places these days, but there are exceptions. Other channels are usually operated during the day and I have had good luck in the past gettting help on some of the local "home channels" and on 19 from some of the locals. I personally listen on 9 sometimes, and often give local info on my home channel or 19. I live close to the interstate. I think it would be a good idea to have one. I have one in my wifes' vehicle. Have a great day! Jon.

Jack Thurston (fire228@cybertrails.com) wrote:
: Hey Stupid,

You shouldn't accuse someone of that, when it is you that is wrong.

: We are talking about "TYPICAL"
: applications. CB radios have
: an output impedance of "50 ohms"!
: We are all in a newsgroup
: called "rec.radio.cb"! Get the
: picture? No special cases are
: being discussed here! Energy
: can neither be created nor
: destroyed. The test scenario
: is this. The swr at the feedpoint
: of this antenna measures 3:1. The
: chart says that at a 3:1 swr the
: percentage of tx power being
: absorbed by the load (antenna) is
: 75%, or 25% of the tx power is lost.

No, it means that about 25% of the power is being reflected back towards the transmitter.

: Now, given the information above,
: If it wasn't converted into heat,
: one of you tell me where the 25%
: went? I want to know why

Almost all of it is reflected back towards the antenna when it reaches the transmitter output. There IS some additional loss - and there are charts that show what it is. The loss depends on the loss that the coax would have anyway with a perfect match.

For example: lets assume a forward power measurement of 10 watts and a reflected power measurement of 11 watts. If you go to the charts, you will find that this is a 2:1 VSWR. (Note that the transmitter is probably radiating a bit less than 10 watts - part of that forward power is the reflected power that is re-reflected back towards the antenna.

Now assume that you have a 100 foot run of RG-8 coax, which has a line loss of about 1.2 dB/100 ft at 27 MHz. By returning to the charts, you would find that the additional loss was about 0.3 dB. If you were using a short length of coax, so the matched coax loss was negligible, then the additional loss due to the VSWR on the coax would also be negligible.

: I'm replacing final transistors
: in these radios due to damage from
: operating them into grossly mismatched
: antenna systems. If it isn't heat, then
: WHAT? I'll tell you why. Because
: operating this equipment into poor
: excuses for antenna systems with
: high swr's BURNS UP the final
: transistor. If you still don't
: believe me, you moron, then try this!

Sure, the transistors burn up. But it is not due to reflected power into the finals - that does not happen. What happens is that you have a mismatch. As the finals are designed to operated into a 50 ohm match, and yours (at a 3:1 mismatch) is either 150 ohms or 17 ohms, the finals cannot operate at their designed efficiency. Now the power from this reduced efficiency has to go somewhere. Guess where that is! Right! Heat in the finals! This is power that never gets into the coax in the first place.

: If that was the case, then you could put the antenna tuner anywhere in the
: line, and it wouldn't make a difference.
:
: Somewhere along the line, it became convenient for people to tell others
: that it just gets rereflected until radiated.

It does, except for the losses in the coax.

: Folks, this isn't the case.... Otherwise, transistors wouldn't be
: overdissipated when run into a high swr, amp units wouldn't get hot, and
: coax wouldn't get warm.

See my other post. The transistors do not overheat due to reflected
power - they overheat because they are not running at designed efficiency.
THAT is the power that is overheating the transistors - and power that
never gets into the coax in the first place.

Disconnect the coax from the radio and key it up. The finals will run at
0% efficiency - e.g. no power out at all. They will get very hot very fast.

: You can hope all you want... Unless it is a tuned line, the power won't get
: rereflected... It will get absorbed by something.. Coax, antenna and
: output network.

Not all of it will get rereflected. As you note, some of it get absorbed by
the coax. But all the power that reaches the output stage of the transmitter
will be re-reflected. Some of that power will be absorbed by the coax on the
way back to the antenna and is lost.
:
: > Another possible scenario would be a radio with an antenna tuner on

: > incident power level is now higher because it is now the sum of the
: > radio output power plus the re-reflected power. The antenna now
: > outputs a power level that is equal to the radio output power level.
: > Thus, in this scenario, the power is not lost; no heat is created.

The tuner is not necessary - all the power is still re-reflected. But
by using a tuner at the transmitter - you can now load the transmitter
into the designed load - so it can output full power (instead of turning
an undesireable percentage of the input power into heat). You thus have
full power into the antenna (as you note) minus any coax losses. If the
coax losses are insignificant (such as with open wire feeders or short
runs of coax) then essentially all the power will be absorbed by the
antenna.

This is all elementary transmission line theory - and it all can be
demonstrated in practical circuits. There are probably hundreds of
texts on the subject (it seems just about every college professor who
teaches the subject writes his own book). The Radio Amateur's Handbook
covers it in a very sketchy and basic way. Far more rigorous texts
are available.

Not necessarily. The SWR meter can be fooled into producing a false
reading. This is the "apparent SWR" - and can be radically different
than the actual SWR at the meter.

Here's another one that I got that I thought may be useful to pass on. Any predictions for the gurus? Will it be a good one, or bad or skip?

*** Listmaster Advisory ***
Subject: Meteor Storm Nov. 17-18, 1999
Due to the forcasted Leonid Meteor Storm that is coming up, cbers on this and other groups should be advised and get the word out that skip conditions may be mildly to severely increased/decreased during this time as a result of the forcasted Leonid Meteor Storm.

The Leonid Meteor shower (and in this case a Meteor Storm) involves the earth running into small particles (the size of a grain of sand or slightly larger) from a passing comet. These particles hit the Earth's surface at speeds around 100,000 mph and burn up (CNN).

For this group, I am wondering if members on this list try to pass along reports of skip conditions on AM, Sideband, and the Outband areas of the CB spectrum during this meteor storm.

Thank You!

Sincerely,
Keith Thews-CB Radio Egroup listmaster

When 40 channels first came out, it was a "Gentlemans Agreement" that
channels 31-40 would be for S.S.B. and channels 1-30 would be for A.M.'ers.
WHO decided this? I don't know. But it worked fine. THEN, after people
started to modify their radios, generally A.M.'ers went down below channel
1, and Sidebanders went above 40. But nowadays... it's a CLUSTERFREAK !!!

There was no antenna tuner included in this scenario.
The majority of operators do not use antenna tuners.

Jack

Now I heard of a way that you can test SWR with a DMM, is that true. If
so, does anyone know.. I really don't feel like unplugging, unwiring my
base SWR to check a mobile.

Why would a radio be made with low level AM modulation on purpose? It
seems to defeat the purpose of having the mode in the first place, since
the TX is really poor...at least in my experience (ppl had a hard time
understanding me less than 2 blocks away).

I think most of the noise in the 2950's receiver is generated
in the front end rather than the IF strip, therefore the sharper
IF filtering really won't help much. Am I right?

Okay, the FCC was created by congress. Actually, I had no idea which branch created it. I assumed the executive branch and then set out to quickly describe how that process worked.

Actually, its probably not that important which one created it in this context - the main point is that it was legally created, contrary to Green's claims. In this case, Green should read Article I of the Constitution, instead of Article II.

However, thanks for the correction.

Just applying your own standards to you, PLL. You have repeatedly claimed that nothing but CB radio topics can be discussed in this newsgroups - therefore Hams have no business being here.

Well, it is obvious that illegal outbanding, or illegal freebanding, are not CB radio topics. Therefore, by your own standard, the people who want to discuss these topics have no business in this newsgroup.

The Hams in this newsgroup also enjoy CB radio, and restrict our conversations to topics related to that. Or we address topics relating to this newsgroup, such as the use of this newsgroup by people who do not belong here - the illegal operators who operate on non-CB frequencies.

And, after that tirade, I doubt any of us would want to know you. You need to learn how to relax, CB1999. Your thin skin is going to give you a bad case of high blood pressure. Have you seen a doctor recently?

Actually, it is probably more your angry attitude towards others who disagree with you that is the "epitame of our great country falling the <gratuitous foul language snipped> apart."

Very good analogy. A perfect narrative of why a community creates laws, and what could happen when those laws are ingored by large numbers within that community. Just as valid in the world-wide radio community.

PLL, there is simply no good reason why the FCC should create another non-commercial hobby-related radio band when there are already nearly 20 bands in existence for that purpose? There is absolutely nothing that you could do in a new band that you could not do in one of the already existing bands.

Therefore, there is absolutely NO REASON for the creation of a new band. Therefore, it is not going to happen. I'm not saying that, simple logic is saying that.

If you want more than you already have in the CB band, then study, take a test, and get a license. Again, I'm not saying that, the FCC is.

Stop trying to blame ham radio operators for all this. The opportunities are already there - YOU are the only one preventing yourself from taking advantage of them.

A lot of people pull the limiters out of this chassis to get modulation. Put a 1/4 watt 1K resistor from the emiiter on Q39 and Q57 to the board and recheck the modulation. it is unbelieveable! back the stock carrier down to 5 watts(mine came in the box doing 8). Watch it run.....

Hear! Hear! I posted your entire message again because I wanted everyone to read it one more time. It is exactly to the point of many discussions in this newsgroup. CB'ers have to clean up our own act it we want a better radio service. It is time to start protecting our own self-interests by getting rid of those who harm this radio band.

I 'm going to buy a handscanner but I don't know much about scanners.

I want to use it especially for making emergency calls on mountain trips.
And also just for fun.
What type should I buy?
Is it possible to transmit wtih scanners?

Thanx,

Olivier,

Yes, I have.

You just didn't realize it.

Does this ring a bell?

"I guess I have to take your word as like I said some where before I don't build amps, and if it breaks I wont be the one to fix it. Yes I could replace parts by myself, yes I can build a box by looking at some one else's buy why bother? There are many people who build wheels but only one inventor. this kind of gets off the subject but how cares I see allot of that on this ng"

It should.

You have just proven yourself wrong.

Ohms law is yes, V*I=W, but their are other facets that you need to take into account.

You have shown us that:

1. Your degrees are nothing (what you state doesn't exist. Where are the accreditations from the "Universities" that you attend(ed))
2. You don't know what you are talking about
    A. Because of lack of experience
    B. Because you didn't pay attention in class
    C. Because you never did go to class.
3. You have a lot to learn!

I suggest that you purchase a large current meter, and get a variable regulator (one shown in the pics on your lame web page will work).

Measure the current draw as you bring the voltage up and down.

Problem proven.

And don't try to impress us with your mastery of Lou Franklin's books...
You don't even have them down pat yet!

> The above SOUNDS good, I admit...but if the USCBA can't be bothered to listen to the voices of those who apply for membership in their organization, I have to wonder........

I'd like to know a little more anout USCBA before I consider membership. I have checked over their website, and found nothing obvious concerning a statement of the goals or purpose of this group. I would also like to know how the leadership is selected (is is a club with elected officers or a business). And finally, I would like to know where they stand on certain issues (illegal radio equipment, freebanding, etc).

At this point, their poll suggests that they intend to promote FM, freebanding, and higher power output (seven of the twenty questions related to this). I saw nothing in the poll about the promotion of proper operating practices, the use of legal equipment, or self-policing of the band.

I was also concerned about the question asking if this organization should keep a database of callsigns, handles, names. and addresses. And the question about this organization policing the ranks of CB operators. I would like to know a lot more about the people involved in this group, and how they plan to do this, before even considering either of these questions.

At this point, I have far more questions than answers.

Why wouldn't you use fuses?

What would you say is a favorable max 10 second output from a 16 pill amp being driven by an 8 pill in competition? Hell, there is well over a thousand watts of feedthrough power there!

You, as the EE, would know that, right?

Exactly!

I use current shunts on the output of my alternators (HUGE wirewound
resistors) and a dash mounted ammeter.

Let's me know exactly what is going on.

Where are you going to get an alternator that provides 20 volts at 250 amps?

One that does this in driving around mode, with the stock pulley on the
crank, that will do this at rated temperature?

(hint... It doesn't output DC).

> HEAR IS MY IDEA INSTEAD OF BEATING UP ON EACH OTHER AND MAKEIN FUN OF
PEOPLE
> WHY NOT ENCORAGE AND HELP PEOPLE.

We usually try to. You are the one that came here, admitting that you never
ran serious high power, then told us that we where wrong.

Their is your problem with this group.... You think that you are right,
because you saw something or read something.

Since you are so close to Dave and crew, why don't you drop by and ask
Dennis what he thinks of what I say.

You will be unpleasantly surprised.

 IM GIVING UP ON ALL THE OTHER STUFF I WAS
> FIGHTING ABOUT.

Giving up, or admitting defeat?

I CAME TO THIS NEWS GROUP STUFF THINKING I WOULD LEARN
> SOMETHING

If you would shut the f*ck up, and listen when you ask a question, instead of asking a question, then arguing with all the answers that you get, you would learn.

Until you learn that basic fundemental of education, you will be a nothing.

Sad, but that is the truth.

SO TURN THE WORLD AGAINST ME.

I don't have to. You have done it with your mouth and fingers.

MY FIST MESSAGES HERE WERE TO STAND
> UP FOR DAVE MADE

Dave already has a reputation as a good box and builder. He doesn't need someone who hasn't run serious power standing up for him. You can have your loyalties, but when you open mouth and insert foot, you make him look bad by association.

When you are ready to run some serious power, come on down to Texas. We will show you a 25K slug popped in the corner, AC style.

And that is the daily driver!

I TRIES TO DO SO WITH OUT PUTTING ANY ONE ELSE DOWN. BUT
> YOU GUYS DID NOTHING BUT THE OPPOSITE.

Oh bullshit. You have come on this newsgroup, putting everyone and their opinions down.

You ask a question, or make a statement, then the first time anyone disagrees with you, you jump their shit and attempt to make them look like an idiot. Only when the rest of the knowledge on the group makes a counterattack do you sit humbly down and admit defeat, but only to an anonymous post.

Nice try at whining, but you suck.

>
> GOD BLESS ALL THE PEOPLE WHO PUT THERE NAMES ON OTHER PEOPLES PRODUCTS YOU
> KNOW WHO YOU ARE.

Yes, and God Bless the companies that sell blank faced amplifiers, knowing damn good and well that people are doing it.

Let's see..

That would be every manufacturer of amplifiers out their! So, unless they have a problem with people doing it, I suggest that they continue.

Dave and crew is just pissed because they are making no residuals from the sale of Dannie's boxes. They had no problem with Ricky selling the Galaxy Gold amps, because they where being purchased from them.

So, who is the bad guy here?

> GOD BLESS ALL THE WANNA BE TECHNITIONS OUT THERE YOU KNOW WHO YOU ARE.

Looking in the mirror when you wrote this, huh?

> GOD BLESS THE PEOPLE THAT REALLY DESERVE TO BE BLESSED YOU ALSO KNOW WHO
YOU
> ARE.
>

Thank you for your support.

In the future, sit down, shut up and listen.

Yes.

The 16 pill (Jason's old box) is still in the closet. I don't run it much.

Too much sentimental value, being Cat's old amp and all.

And, it was one of the first Messenger's ever built for that size.

Except that current is not naturally RMS.

Whatever the peak current figure is, is what the box can do with no
batteries.

I will stand by my figures, as I know they work.

thats not normal at all. yours had a problem if the modulation was that low.

they work fine on am for me, perhaps yours needed adjusting. these radios were primarily made for ssb use and they outshine any others in that class.

>Why would a radio be made with low level AM modulation on purpose? It
>seems to defeat the purpose of having the mode in the first place, since

Any electrical engineer understudy would be able to build a box from scratch..

Hell, it's real hard...

Turn on the transformer squared = impedance transformation
Vcc squared / 2(Power out) = necessary turns ratio.

Their. You know pretty much all you need. Add 120 pF caps to the collector to ground and you have parasitic suppression. If you have high gain lot transistors, decrease the base to ground resistance. I use 7 ohm resistors, but feel free to use the standard 10 ohm ones.

Hard shit, huh?

And I also think it is funny how you go off on me for stating something, that has been argued and proven on this newsgroup for quite some time, then when one other person comes out and states that you are wrong, you make a feeble attempt at redeeming yourself by agreeing..

But nowhere did you acknowledge that I was right, nor did you apologize for your childish antics.

I hope that Dave and crew enjoy having a customer like you... Enjoy it all the way to the bank.

Toll Free

> I believe that if you are given a chunk of RF spectrum and then you turn it into trash-heap through your own neglect, you are not justified in crying about it. You are certainly not justified in moving onto frequencies allocated to other services "to escape the idiots" - no matter how abandoned these frequencies seem.

The irony to all of this is that the same people, that complain about the "RF police" hams, are the same "elite" CBers, that operate on freeband, to get away from the riff-raff on the legal 40. Maybe the riff-raff should complain about the "stuck-up" freebanders?

What you say makes perfect sense, and a perfect example of why there needs to be a test to get on to the ham bands. If you give a chunk of bandwidth to "the public" without any testing, then the lowest common denominators of society will ruin it in short order. If you want to seperate the "serious" CBer from the trash, then you have to devise a way to do it. If you give a test to operate on the former freeband, then what's to distinguish it from ham radio? Taking the test seems to be what these people fear/dispise most.

Bottom line, you can't have it both ways.

So, according to you, people that defend personal responsibility, and the accountability to be a good citizen and to follow the rules as set forth by whomever, are the reason that the country is falling apart? Which then implies conversely, that people who ignore responsibilities and rules, are somehow making this a better place? Better for who? In what way? I'd love to hear your "logic" on this one....

Then you conclude with vulgarity.

And we're now supposed to believe this?

You try to tell a nut that he's nuts, and he'll swear that you're crazy.........

You're both right, and are merely arguing semantics. Bob is correct in
that the power is reflected back, but that reflected power is not
radiated, so for all intents and purposes, is lost.

Simple. It's the reflected power "bouncing" back. Since it has nowhere
to go, once reflected, it dissipates as heat loss. That does not
diminish the fact that the power is reflected. But you might as well say
that reflected power is also "lost" as it is never radiated.

Actually final transistors burn out due to the extreme mismatch casuing an out-of-resonance condition that causes the final to draw more current (Remember a transitor draws the least current in resonance) than it can handle.

I've keyed stock, no screwdrivered, 3.5 watt output CBs into no load for hours, and have not damaged the final, because the extra final current due to mismatch did not exceed the design rating of the device.

But you are right about the reflected power being absorbed SOMEWHERE, and being converted to heat.

This is a silly arguement. BOTH sides are right! It's just semantics
Reflected power is lost power regardless of what happens to it.

I did it to a Spark-O-Matic on display in K-Mart 20 years ago, that had
no antenna (But did have the mike), and no problem.

What happens is when people screwdriver their radios, they push the
limit of the final, so that there is no more reserve left when the match
is bad, so the radios are more likely to pop finals after a peak job,
than if they are left stock (Unless you also replace the final with a
"beefier" part).

> RF energy than the "finals" will!

I had to repair a radio shack cheapy mobile rig once that had very weak
output. I thought the final had popped, since they were using it with a
very Mickey-Mouse Antenna, with a bad SWR. Turns out the final was fine,
but they cooked the enamel insulation off of the final tank coil (Which
was way too small for that kind of power), from running it out of
resonance, and it shorted out. I replaced the coil with a "bigger" one,
and they haven't had another problem.

I'm not sure about that one. What happens during modulation peaks, when
the peak collector voltage doubles for 100% modulation? Wouldn't the
zener clip the mod peaks?
I guess if you aren't modulating the final stages (in a low level
setup), then this would work ok.

I'm sure that there has been a multi-million dollar industry that sprung up around the generating of, and responding to the hype surrounding the Y2K scare. Many people have gotten rich off of other people's gullibility....

You didn't choose a scenario. You said, "the [reflected power] is NEVER
going to be seen coming from the antenna regardless of how many "trips"
it makes up and down the transmission line."

Keyword: NEVER (you even capitalized it)

You were very emphatic (but wrong).

Furthermore, an antenna tuner isn't even actually needed. The
transmitter output circuit could be retuned to perform the identical
function of the antenna tuner.

Typically, no power is reflected back towards the antenna
when it reaches the transmitter output. If the transmitter
output impedance is 50 ohms, it is a perfect match (termination)
for the reflected power. The power enters the transmitter
and is dissipated as heat.

Use your formulas and/or Smith chart to find the reflection
coefficient for a 50 ohm transmission line terminated with
a 50 ohm impedance.

It *is* due to reflected power. It *does* happen. This
"reduced efficiency" that you describe is the effect of
power reflected into the transmitter.

No, it doesn't. If the transmitter output impedance is 50 ohms, any
power incident upon it (i.e. reflected power), will be absorbed; not
reflected.

See my response to your other post. Toll Free is correct here.

> Disconnect the coax from the radio and key it up. The finals will run at

That is not inconsistent with Toll Free's and my position.

Yes, some power is lost in the coax. No power reaching a 50 ohm transmitter
will be rereflected.

> antenna.

"Loading" the transmitter is functionally equivalent to using an
antenna tuner. Whether you perform the tuning in the transmitter
output circuitry, or with an antenna matcher, you are performing the
same function. You are tuning the transmitter output impedance
(or transmitter/tuner output impedance) to an impedance that is the

complex conjugate of the input impedance seen entering the transmission line. At this impedance, total rereflection occurs.

A typical CB radio does not provide a convenient ability to "load" the transmitter. Thus, its output impedance is typically 50 ohms (where absolutely no rereflection occurs) and an antenna tuner is a more practical solution.

> This is all elementary transmission line theory - and it all can be demonstrated in practical circuits. There are probably hundreds of texts on the subject (it seems just about every college professor who teaches the subject writes his own book). The Radio Amateur's Handbook covers it in a very sketchy and basic way. Far more rigorous texts are available.

Yes, it is. So let me repeat my question on elementary transmission line theory:
If power in a 50 ohm characteristic impedance transmission line, impinges upon a 50 ohm impedance, what percentage of the power is reflected?
(This is the exact scenario seen when reflected power meets a 50 ohm transmitter)

A CB radio is not an emergency tool anymore. CB has regrettably become largely a hang-out for society misfits. The last thing a young lady wants to do is get on a CB radio and say, "I am alone, and I need help."
Get a cell-phone.

>typically see 202A at slightly over 18 V out of the 165 chassis.
How is it that you're able to measure these output current levels when the manufacturers data sheet output curves seem to run out of steam at a little over their rating?

Spinning them faster 'should' only generate more heat, not amps:-)!

I am not criticising, just questioning.

I received the full catalogue from C.E. Niehoff Brushless Alternators.

Did you ever find out more info on the large Mitsubishi 500 ampre?

My last e-mail from Mitsubishi told me that they would look into the availability of such, to date I've not heard back.

I think at the end of the day it's difficult to beat Leece for price V's output. they seem to be relatively mass produced as compared to either of the above or Electrodyne.

As well as continuing down the higher efficiency FET route (no doubt not allowed in shoot-outs) I will spend some time looking into the pro's and con's of switching supplies for the HT in an AC mobile situ.

You mention hash from a switcher supply, which I'm sure can be sorted. Have you used an Icom power supply lately, they are very clean? I have a PS30 on the bench sitting right next to a Harris transceiver and it's totally quiet.

Kind of off topic.

Sorry

Oldmantube thanks for your response. Judging by your response and your name, I take it you know a lot about tube boxes. The particular box that I have most people I talk to, have never seen before, and have no idea what it is. They all know what the Eagle 500 is but are at a loss for the Mark VIII. I have a few more questions I hope you do not mind if I ask you them. So are you saying that these linears are still being manufactured now? If so do you know how I could contact the
person that makes them, I need to get a lit switch, one of the bulbs in the switches burnt out on me so it no longer lights. And just ot of curiosity, How much do you think this linear is worth? It is in perfect shape, not even a scratch
(except for one switch that no longer lights, but operationally it works), I get about 1.2 kw on am with low drive. If I am not mistaken I think this one was manufactured several years ago. Also is this linear a 1000 watt rated box, a 500 or a 2000? I kinda figured it was a 1000 based upon the output I was getting.
Thank you very much for the help Oldmantube,, I greatly appreciate it!

On most of the alternators, including the leece nevilles, if you were to run them at 225 volts DC output, you would just about cut its current capabilities in half. Put one on a test bench, load it up and let it get good and warm and this will be very noticeable. I agree with you on this one Toll.

I have some shunts I test with, they are 150 amp shunts, old military stuff.
I have a bank of these tied together and I use a 50 ma full scale meter to
measure the voltage drop across the shunt, the meter is handwritten and
calibrated to my fluke dc current transformer, works real good and is fairly
accurate, Cheap to.

And to think all the time and money I've wasted reading publications of
Turman, Maxwell, Smith, Caron and the ARRL, when I could have learned
transmission line theory right here- and for free.....

The output does not appear to be a static 50 ohm load when it is

generating power. Most of the re reflected power does make a
return to the antenna.

>But you are right about the reflected power being absorbed SOMEWHERE,
>and being converted to heat.

Most of the reflected power does re reflect back to the antenna.

Look at it this way: A 100 watt transmitter sees a 3:1 match.
Approximately 25 watts gets reflected back to the generator.
Let's assume no coax losses for simplicity sake.

This is where we get imaginary.......................
Put yourself in the place of the 25 watts. You have just gotten kicked out of your home and would love to find a 50 ohm apartment. You come upon transmitter that bombards you with100 watts. Hardly a static 50 ohm termination. You high tail your ass out of there and ask for mommies permission to come back home.
....End of the imagination

If the reflected power was dissipated in the transmitter then you would have to believe that you could take a TS-940 (100 watt) transmitter and key it at one end of a piece of coax, and then take a 2510 (25 watt) transmitter at the other end and key it.and see a perfect match on the 2510.

I dare you to try it.

> 6 kw RMS WITH ONE ALTERNATOR AND A 16 PILL? OK I WONT GO THERE BUT I WILL
> ASK WHY YOU USE FUSES WITH YOU AMPS??

I know personally that a good 16 will key this easily on a 18 v battery bank, with one alternator. It will not stay up that high for very long.
The reason for fuses is simple. Imagine I am driving down the road and Joe blow runs into the side of my truck and shorts out 3 of the 4/0 welding cables going from my charging system to the battery bank in the back, and at the same time he knocks a hole in the gas tank and gas is leaking all over the ground and I am knocked out in the wreck, or what if my daughters are with me? You get the point, I only use 1of the 270's on my truck for drive around and that is to run an 8 pill, I only leave one 300 amp fuse inline while doing this, all the other fuses are removed, but sometimes you want to go to the pump, anyway, all of the fuses are right at the batteries, and I run the 270 independently, I dont run any fuse in competition, I have 1/4"x1" buss bars to take the place of the fuses in competition. When I get back to the hotel the fuse goes back in buss bars come out. Here is a link to a couple of pictures of the truck, you cannot really see the fuses. but can maybe get the idea.

http://www.geocities.com/Baja/Outback/6165/lubbock014g.jpg   This is under the hood, the other two alternators are out of site, one down low and one behind the fan shroud. all this is run on one REAL long serpentine belt. I can change to my factory belt in just a couple of minutes, for those long trips.

http://www.geocities.com/Baja/Outback/6165/lubbock015g.jpg   This is in the tool box, the small opening on the far side is where the fuses are located, the large opening is where the six gelcells are at, the wires go from the batts to the amps, the wires leaving the batts to the charging system are fused within on foot of the batteries, there is a 4/0 welding cable out of site in the bed of the truck where there is another tool box, the bird slugs are a 5watt (forward) and a 50 miliwatts (reflect), Cause as you know I run only a barefoot radio, I just mounted all the alternators for the hell of it.....ha ha ha ha.   P.S.   Now keep in mind that all of this is not real, and all pictures are fake.

Now thats real smart, what happens when your transmitting and your rf
peaks exceed the forward turn on of the zener? Anytime your RF output

exceeds .7 volts in the forward bias direction of your zener, you have
just shorted out your output.

Enjoy. You have just made your transmitter unusable.

No way you can get CBers to only use 34 channels of a 40 channel radio

> > If you here amers from 27.355mhz through 27.955mhz

Uh,excuse me but these are NOT CB freqs above 27.405!

>> explain firmly about the agreement

There is no agreement!

 and use of these frequencies,this is the only way we as

Well the other way would be to get a license and SSB to your hearts
content,the SSB portions of those bands are not populated by AMers.I
agree that SSB is a great mode but the SSBers can at least understand
the signals when an AM station breaks in,the poor AMers can't even
understand you guys enough to hear you politly tell them about the

non-existent agreement.

All I have to say is "Yeah, right!"  Tell that to the average CBer who
has an AM only rig then duck.

I was just wondering what radio was your first. My radio was back when I hit 14 and my father got me the strangest thing. He got me a Gemtronics 40 channel radio. The Gemtronics, was a big beast. Had tubes in it, but this wasn't that long ago. It was 1979, and they still made this radio. It was great, but being young, I sold it about 6 months later, and put down the money on a new RS TRC 449. Now that was a great radio. AM, and SSB mobile, with a chrome face. Best radio Radio Shack ever made. It was a copy of the 138 GTL, and it was moded from 25 to 30 Mhz. I miss that one too. Well, tell us some stories folks.

Mo

When I got out of the Air Force in '80 I took some programing classes to make use of my GI Bill benifits. They were already talking about the Y2K bug then. The instuctor then said all the programs we wrote had to be compatible for use in the next century. We were making the programs Y2K compatible back then without buying new computers.

do you know the exact way to set it up for a Cobra 20 Plus?
My radio has a five pin din connector...i am still al little confused about how to hook it up..
Thanks for your help..

Chris

Mouser electronics would have that relay.

Or, www.rfparts.com

Merrit stocks most of the common relays.

No.  It is an error in the reading, and meaningless.   Do you run "apparent"
green lights?

Look in QST.

They did it to the old Midland chassis radios.

Fair Radio Sales still has some of them, as does #12, if I remember
correctly.

Larger pulley's on the output shaft of the alternator, testing them when they are cold, not running them all the time.

> Spinning them faster 'should' only generate more heat, not amps:-)!

Not necessarily true.

People are running 3CX3K amps on a single alternator, using a 14 inch or bigger mainshaft pulley, and getting full power out of them because the alternator will push more current the faster the rotor is spinning in the stator.

Law of physics their.

>
> I am not criticising, just questioning.

Not a problem.

>
> I received the full catalogue from C.E. Niehoff Brushless Alternators.

And what do you think?

>
> Did you ever find out more info on the large Mitsubishi 500 ampre?

No. Last time I called the place he wasn't too friendly about it, either.

Makes me think he was fulla shit about it in the first place.

What have you seen in the Neihoff catalog.

>
> My last e-mail from Mitsubishi told me that they would look into the

Your right. They are the biggest, baddest alternator out their Vs. Price.

Because they are the biggest company in the game.

>
> As well as continuing down the higher efficiency FET route (no doubt not

Sky class will let you run anything.

And for that matter, you should be able to run whatever transistor you want
in the classes, in whatever mode you want.

Because that transistor is rated at 12 volts input makes it legal.. At
least, it is legal when I use 8XMRF455s in the same class with 8X2879s!

But, then again, we went through this last year, too.

>

> PS30 on the bench sitting right next to a Harris transceiver and it's
> totally quiet.

Nope.

The last switcher I used was about 10 years ago. I have 3X5 volt at 75 amp.
I put them at 4.75 a piece (or thereabouts) and used them to power 4 pills
on the base.

Had to turn them off when I was not keyed, as it took out the RX.

As well as the fact that for a switcher to stay together, it has to have
nearly 20 percent load on the output at all times.

Kinda takes away the efficiency unloaded.

I would be interested in seeing the new ones, though. I hear they are
clean.

Check out rec.radio.scanner
I think you'll find that a scanner is a recieve only unit.....

I would just get a cellular phone. Even one that hasn't been "activated" can dial 911 anyone in the USA.

I wouldn't call for help on a CB personally. You never know who might show up!

Once again, showing that you don't know a fucking thing, aren't you...

The Zener action of a Zener diode won't happen until you hit the prescribed voltage.

All diodes are zeners. The standard silicon diode avalanches at .6 to .7 volts.

A larger zener diode avalanches at a higher, prescribed voltage.

Have a nice day, and next time, do a little reading before you spew.

Mine was a Cobra 1000GTL. I still have it and actively use it. It is 100%
stock. Not peaked, modded, nothing. I love that rig. It brings back so
many memories. I think I got that for my b-day in '83...I think.

Conditions have been pretty good that last few weeks. The best contacts I've had
are south asia and africa. I guess a chat with someone tossin' a shrimp on the
barbie in Sydney would be nice. I'll check it out and see if the conditions are
wild 'n crazy. :->

Do you remember "TwoStroke 441" by any chance? He has a 3900 as well. He was out of W. Nyack.

Dumby, eh?

I believe that you meant... Dummy..., DUMMY!

Anyway, I can see from you lack of mastery of even basic phonetic skills (Hooked on Phonics would have been a better XMas present for yourself than that 32 pill) that you don't have a degree... Hell, to get a degree you also have to pass the basic RRR classes.

So, have a nice day. It is plainly obvious that you don't know what you are talking about, don't have a clue as to RF amplifiers in either theory or working knowledge, and can't shut your hole long enough to learn something from the boyz on this newsgroup who have "been their, done that".

Have a nice day, Pozersack, but please, I beggith of you, don't attempt to tell people what you know.

This newsgroup doesn't listen to anyone tell us how smart they are... We stand by and wait for you to slip up and make a fool out of yourself (like you have, and I pointed out in this thread... Hell, at one point, you AGREED to what I am stating), and then shows no mercy.

Sad, but true. You buried yourself with your lies and fairy tales of grandness.

> and regulators that go to 24 volts dummy again

I don't care what your regulators go to, what the standard voltage output is on those alternators is governed by more than those DaveMade regulators you have!

Hell, a 165 amp Leece alternator will do nearly 65 volts full field, with close to no load, but nowhere near that when you put a load on it.

Once again, you have shown you are a newbie, an idiot, and incapable of learning anything.

Almost all alternators will go to 24 volts, they just don't do rated current at that level.

Once you go above 14.4 volts, all bets are off as to what that stator will put out when subjected to a load.

Well once again you are showing that you don't know a fucking thing.

The Zener action happens when you reverse bias the diode. A standard
diode avalanches at the reverse break over voltage, and its not .7
stupid. a 1N4004 has a reverse break over of 400 volts, but the
forward bias is still .6 to .7. Do you know the difference between
forward and reverse bias? Here's a hint dumb ass, a 16 volt zener
will break over in reverse bias at 16 volts, but guess what when you
forward bias its .6 to .7 volts. Do you have another idea what the
forward break over on a zener diode is? Put a diode across your output
and see what happens. Read up on diodes next time, you don't have a
damn clue. Elementary electronics and you flunked.
Have a nice day, and next time, do a little reading before you spew.

No you reread it dildo, Tool free is trying to tell everyone to put a
zener diode across their output. Do you know what voltage it takes to
turn on a zener when its forward biased? I thought not, its .7 volts.
How would you say that would effect your output when you clip half of

your output waveform to .7 volts?   You evidently don't understand
simple electronics theory do you? Get a book and READ, then maybe you
will understand.

While in Decatur Illinois.How many times did Jessie Jackson use the
words " We must reclaim our children"? It's a shame nothing was said
about Unique Dream Williams or Atrue Dream Williams. Please look at the
sight below and forward this msg. to as many people as you can. Why cant
we reclaim these two Decatur,Illinois children?

....I think the chances of retuning the typical output stages of a
solid state rig to match a 3:1 swr is almost nil. I won't say it
can't be done but I doubt there is sufficient range in the tuning
mechanisms to conjugate match a high +/-j factor. You would most
likely need to modify the output stage with different component
values which still doesn't increase the output from your antenna to
any great degree.

> Nope. Bob is right. The power "lost" fable is one of the oldest
out
> there.
>--

....It is not a fable. The power is lost (in coax) as heat.
....Here's what happens to cause it.
....Think of your signal as a series of pulses or charges leaving
the transmitter. These pulses reach the antenna and are absorbed by
the antenna's resistance which in turn creates circulating currents
on an antenna element thus radiating that signal into the air. This
assumes the antenna is well tuned and matched to the coax impedance
leaving only a resistance and no reactances. i.e.. no reflected
power.
....Now present that series of pulses to an antenna that is reactive
in either direction and see what happens.
....As the forward power advances towards the antenna it will meet
up with that reflected power coming back down the line. The
magnitude and phase of that ref power will depend on whether the

antenna presents a high inductive or capacitive reactance.

....When these signal components meet there's gonna' be a tangle. You'll have voltages and currents of opposite polarity trying to occupy the same space on the line. In it's simplest form, like connecting both ends of a battery together. You get a current flow as the two voltages try to defeat each other. If the voltages are high enough you can have a fairly large current flow. If the current is high and the wire size is too small to carry that amount of current you will have heat generated. Not unlike the action in everyday household wiring. Too much current on a small a wire causes heat.

....Since these pulses or charges are repetitive and change polarity every few feet (hence 1/4 wave, 1/2 wave etc.) you will find that the coax begins to heat at regular intervals along the length of the line. These points are the physical indication of a series of standing waves.

....Trust me when I say this is a simplification and I hope it brings to light the idea I was attempting to illuminate.

Thanks for the reading,   BobC

A little clarification does seem to be in order since Ed's net chart for those interested in DXing doesn't exactly seem to indicate that legal CB operation is necessarily the focus of this group.

While it is admirable to petition the FCC to make changes to their outdated CB rules, perhaps it would be wise to downplay activities which don't comply with the current rules.

It may not be possible or desirable to organize CB operators, but any effort to bring the rules more in line with real world operation might be worth pursuing.

I have a mint condition 266Mhx Pentium with 32 Meg sdram, 4 GIG HD, CD ROM, With External 250Meg Zip Drive . Has thousands of dollars in software such as LAB VIEW, MAPLE V, BORLAND TURBO C++, ADOBE PHOTO SHOP, CORREL DRAW, OFFICE 97, Those programs alone are worth more then im asking for the whole set up. Will Reinstall Electronics Work Bench Only if sold with ZIP DRIVE!

$1,500 Takes all $1,300 With out zip drive. Email Me for PHONE #

Yeah, if you take the number from their ad, circle it on the reader
service card and send in the card, you get their catalog, and then
after that they send you their flyers and stuff...I didn't mind that
because, as you pointed out, they sell a lot of stuff you can't find
elsewhere. Only once in my entire life have I ever seen a book
published by Palladium Press in Barnes & Noble, for example.

>> I was an SWL, CB operator, and registered monitor long before I ever

>
>Isn't that, like, sacreligious or something? :-)

There are probably some hams who think so...I'm not one of them. For
me, ham radio is PART of my hobby, but it is not the only thing in
radio that interests me, and it's not even the MAIN thing that
interests me.

>Hey, if they're that dumb that they can't tell a registered monitor ID
>from a ham call, why not point out how dumb they are? Maybe they'll be

Anybody who knows the difference between a ham callsign and a monitor
registry already knows...no need for me to waste bandwidth by calling
further attention to it.

>> KC2FNG, KNY2VS, KJK-14120, KSO-9650, AE279

>right?

Yup. KSO-9650 is from 1975, which is when I first got started in CB.
Back in the good old days, when you could still get a CB license, and
could still be proud to hang it on the wall in your shack.

Greetings!

[For those reading this thread - some are renowned for their knowledge, this is a re-hash, my appologies - but for those interested but not quite getting an idea, this is for them.]

You're forgetting some key points. Coax becomes an active part of the antenna system when SWR measured at the feedpoint, is far different from the measurement done at the radio [point of origin]. The coax in this case, cannot be assumed to give "true" SWR, only "apparent" for injection of the SWR meter and it's patch cord affects the response of the whole system.

The above is the best definition I can give.

Simply, when the coax quits being a simple feedline, and becomes part of the antenna [radiating coax], true versus apparent SWR readings become clear.

Apparent versus true. If foward and reflected waves are out of phase, the standing waves generated on the line, at various points along the coax, are summed together. This summation has negative values. This can have, and has, a measureable effect on trying to obtain true SWR readings. For forward power waves, travelling along the line, can meet and react with reflected waves from the unused power, and altered phase angle [+/-jX] due to interaction of the forward waves with the radiator being returned and the resulting interaction.

There have been cases where forward power is 180 degrees out of phase with the reflected, and return energy meeting at the meter, are effectively cancelled out. Just a few inches away along this same line, a dangerously high reflected voltage appears that can do some serious damage to finals.

True SWR, should be the entire systems SWR. Correct? [Thinking that Characteristic Impedance = True SWR for whole system.]

I should also step-back a moment and help to define this Characteristic Impedance meaning as I see it.

This is simply the overall impedance of the antenna system - measured at the radio, or origin of the feeline. This overall value, is based upon the whole antenna system, including feedline, mount, and antenna.

Then this value is compared to an expected impedance of the device producing RF. In this case, CB radios have 50 ohms. This gives you at least a value for comparison.

To derive SWR, if the impedance of the antenna system equals the impedance at the test SWR jig, then we can safely assume that SWR should be 1:1.

If the impedance is not equal, we have a R+/-jX problem. Could be interpeted as the fault of the antenna, or the coax - or both.

Standing waves exist on any antennas' feedline. If reflected and forward waves are not out of phase [phase relationship] we can also see a low SWR.

Apparent SWR is by measurement at points along the coax, demonstrating that SWR at that given point changes - and is not consistent with overall Characertistic Impedance, proven by re-locating the SWR test jig at another random point.

You can use an antenna on a poor ground plane. With a given length of coax, this presents arbitrarily, a 2:1 mis-match.

Add a patch cord, now the antenna system shows 1.5:1 mis-match.

Ok, whats happening?

Are we fooling the meter? How?

Apparent, at that point of measurement.

True is only characteristic of the whole system, measured at the feedpoint - and is *or should be* the same measured at the radios feedline end.

Why do some applications fail to agree?

You need to re-evaluate the system.

Coax, inherently, is unbalanced. It provides a given level of inductance and capacitance for it's length.

When using coax on an unbalanced system, e.g. - Magnetic Mounts. We only are seeing the antenna as the radiator, working against two variables that occur - the coax, because of it's unbalanced electrical connection made at the antennas' mount, and the reflecting/reactive element of the ground plane.

The antenna is this case is really a mono-pole type.

It's not truly a dipole for the other element is not electrically connected to the antenna. It's generating an image by impinging an opposite effect on the other working element. It's characteristic impedance may be different than that of the coax. It's inductively and capacitively working a field that is generating an opposite effect onto another element that simply is not bonded to the coax at the feedpoint.

People should understand that the use of Coax on an antenna system can have two basic effects. A feedline, and, an active portion of the antenna. Between these two effects, you have "True" verus "Apparent".

I hope this stays on topic with your standards.

While Dancing with the Mouse on Wed, 10 Nov 1999 05:40:40 GMT, the Modem interrupted with an MNI from "warnergt@ptd.net (George Warner)", and the MotherBoard buffered this to Video RAM:

:+> Andy:
:+> Stay on the original subject for once. How do "constructive and
:+> destructive" standing waves that occur along the coaxial line
:+> vary the "apparent SWR"?
:+>
:+> The Coax Length Police seem to disagree with your claim.
:+> I do, too.

Regards!

Do the same measurements I talked about the other day on the stock microphone and make notes. Actually, I would first see if the radio receives with the microphone unplugged. If it doesn't, you know that it uses the Rx lead to Gnd in the microphone. Compare these to the measurements taken on the Mura mic. I think you'll
find that each microphone has equivalent connections.

Colt Black Shadow 1000. Not a bad radio. "Upgraded" to TRC-457. Great radio. Got

amateur license, sold '457 and bought 2m handie. Years later regretted selling
'457, and buying 2m handie! No regrets on the ham license though (ducking). :->

Do a search on the internet for "RFT". This is a programme that gives you all
sorts of convervions - including the one you are looking for.

I got a copy of it off the net a few weeks ago but gosh darnit, I didn't keep
the link...

Greetings!

It deserves mentioning, because a lot of people are getting confused from it.

The Apparent versus True debate, from my perspective, is only for issues regarding Coax length being used to reduce SWR in "problematic" situations.

I do not approve the use of Coax to lower SWR when it comes to CB radios. It is for applications in a "worst case" situation that coax length can provide you with the means to be "on the air" verus not at all.

True versus apparent debate cannot apply to all, nor is this for that purpose. The evidence mounts against using coax to tune for low SWR because the coax is now involved as part of an active antenna system versus being a feedline to the antenna. This reduces performance in many cases, but increases the survivability of the radio in these cases.

Back to the message...

Baluns work like they do for the effort of running Green lights.

It's not an error.

What you call "error", can be ruled out. Do you change the length of the radiator to tune an antenna? Sure you do, you're supposed to.

When you run into problems with trying to tune the radiator, what is the problem?

Bad Coax? Possible - but Brand new?
Connections? Getting warmer.
Location? Strong possibility.
Tried using different lengths of coax? Although not recommended, can offset what the above 3 options give you in choices to make.

Apparent versus True can offer some insights as to use what you have, even though you may not get stellar results from it, you have to settle for what you get.

Coax can work a lot like a balun...

Hint...graphically...

```
-]===================-------------------|
|<--1/4 wave--------|--------1/4 wave-->|
```

Open end of coax left un-connected - with center lead 1/4 wave in length.

Now, try this...

```
-]===========*---------------------|
|<-1/8 wave->|<-------1/2 wave---->|
```

Only now, short the shield to the center lead at the "*".

Apparent versus True, we can safely believe that the above antennas would, or at least should, work.

But if you change the length of the shield portion of the antenna, you affect SWR. The coax needs to be at particular lengths for these antennas to work. They're coaxial dipoles, but are applied differently.

They offer balanced current feeds, but use the elements differently.

Without coax, there'd be a lot of silent keys.

Greetings!

Highly recommended. Good to use in those small spaces in newer vehicles.

http://www.iserv.net/~codyspc

I'm working on a page for getting the most out of these little guy's.

You get a lot of bang for the buck for $99.00 or lower. Only SSB CB radio that I know of costing below $100.00 but can work just like their bigger counterparts costing much, much more!

While Dancing with the Mouse on 10 Nov 1999 03:26:37 GMT, the Modem interrupted with an MNI from "cgo2541273@aol.com5200 (Charles Golden)", and the MotherBoard buffered this to Video RAM:

My first CB was a used Courier Traveller II mobile radio (purchased from EJ's Electronics in Woodbridge, Va anybody remember the place?) ....all chrome case, heavy as a brick.........great radio. Traded it for a "Black Face" Johnson to use as a base radio and purchased a JC Penney 23 channel SSB rig that was the size of a large mobile rig, but worked on both 110 and 12 volts....

By the way, if anyone knows the whereabouts of one of the old Couriers I would be interested in purchasing it.

BK..............

original CB license # KGX-6917 cost $20.00 back in 1971.

Greetings!

My first "dabble" in CB's was when I had a paper route and saved up the money to buy a walkie-talkie - TRC-130[?] - 3watt 3channel WT.

Neat about these things was the ability to "swap" the TX/RX X-tals to get instant oddballs. Fun at the time, and with skip rolling in the late 70's - made it hard to appreciate it. To change Xtals was a bear, and expensive at the time.

Dropped out for a while, then got back into it in 1986. First "true" mobile I had was a Cobra 19+ and a 3' Mag-mount Barjan/Diesel Dummy load of an antenna, on a "mini" ground-plane called "Chevrolet Sprint" with the option of buying the 4th cylinder after the last payment was made. ;-)

Then I grew up...

Gradumacated to:
SS - 360 / SS - 120 FM
TRC-453
Pro640e
PC-122
Cobra 148GTL/Grant XL
HR2510
Emperor TS-5010/3010
Pro810e

Along those times I acquired a Robyn T-240D [Tube-IC-Discrete Hybird], Kraco KCB-4010 [XYLs' odd-ball], Midland 77-160 [Road Max] & 77-115 [another odd-ball].

I guess if it came to "true" love, I'd have to say the Midland 77-160 was the one I appreciated. Merely, for it's survivability in an accident that I had involving a 70+ year old man claiming the "sun was in his eyes". A few scratches and some storage, years later it still works, it's 10+ years old itself - an "old timer" by todays standards.

...[am I old or what?]...

GAWD those were some good times!

Still in it today - even with a Ham license. A lot more fun and the people a lot less complex.

I've even developed a philosophy around CB.

A CB'er will never make a good politician - we're simply too honest!

We "tell it like it is"!

By 'pointed up' do you mean vertically polarized, or aimed at the heavens? I assume the antenna is using a gamma match. Have you checked the distance from the driven element and played with adjusting it in or out? Also, how far off the ground is the antenna when you take measurements. At 11 meters, you are going to get some very different readings if the antenna is at ground level.

Do you have the schematic of the Robyn unit? I have a Colt Midnite Special 40 channel PLL which I believe is almost identical. I'd
love to get the schematic of it. It is working perfectly - perfectly stock, if you know what I'm sayin'. :-> I gather there weren't
too many made of this model, but I've seen one other than mine.

Well once again you are showing that you don't know a fucking thing.
The Zener action happens when you reverse bias the diode. A standard
diode avalanches at the reverse break over voltage, and its not .7
stupid. a 1N4004 has a reverse break over of 400 volts, but the
forward bias is still .6 to .7. Do you know the difference between
forward and reverse bias? Here's a hint dumb ass, a 16 volt zener
will break over in reverse bias at 16 volts, but guess what when you
forward bias its .6 to .7 volts. Do you have another idea what the
forward break over on a zener diode is? Put a diode across your output
and see what happens. Read up on diodes next time, you don't have a
damn clue. Elementary electronics and you flunked.
Have a nice day, and next time, do a little reading before you spew.

No you reread it dildo, Tool free is trying to tell everyone to put a zener diode across their output. Do you know what voltage it takes to turn on a zener when its forward biased? I thought not, its .7 volts. How would you say that would effect your output when you clip half of your output waveform to .7 volts?   You evidently don't understand simple electronics theory do you? Get a book and READ, then maybe you will understand.

CB's are not an alternative to a cellular phone. But, it wouldn't hurt having one with you if your going to drive on interstates. They are more for fun with the side benefit that you can get information on the road and occasionally be used for helping someone out. If you listen to channel 9 for awhile you will hear the local police using that channel to bs to each other while they are passing the time in their cruisers.

A handscanner? I think Lockheed Martin is working on a handscanner
for digital finger printing. Maybe you should contact them...

This is my last post. Please I mean really please dont think your none
educated replys have anything to do with. I know what I know, and I will
find out what I dont know. I Will go through all my text books and cross out
all the stuff I learned and be sure to replace it with your TOLL FREE LAW.
Then I will photo copy the whole book and put my name As the author. It
works with the amp builders right? lol The best thing about the whole
alternator thing is that if the voltages dropps too much I'll spend a few
pennies to buy some new alternators. Big deal. Or I can trade the ones I got
in for a dozen of the cheezy (did i spell that right?) $160.00 ones you use
with built in rectifiers that build up heat and make the alt slugish and
cant be volter @ 24 volts. but since you are the master of all no educated
guesses I sure you already know that right? Enjoy your Life As I know I will
mine.

Ahhh, memories...

Aug. 1973 I was a little 10 yr old punk kid really getting into ham & CB stuff - didn't get the code down for another 2 years so the ham ticket had to wait. Visiting my aunt/uncle/cousins in La Grande, Oregon in the summer, I played w/cousin Dan's ("Red Dog") E.F. Johnson Messenger 223 with a Turner Super Sidekick mic along w/a nice vertical + radials antenna on the roof (2nd story). Cousin John ("Rat Patrol") had a Pace basic compact 23 ch CB (can't remember the model's name) in his Jeep that I thought was quite nice at the time.

Since I was to only use the Johnson "with supervision" (no fun there!) I would go up on the roof sometimes with a Midland 1 watt walkie-talkie - think it was a single channel (not 14!, prob. 3), with the PTT button on the *front* of the radio (push it with your thumb, I guess) and actually worked some DX when the skip was rollin' in: talked to some guy in Las Vegas very briefly before the band died. The local sheriff in LaGrande kept trying to kick me off the channel, saying it was "his" - much to the amusement of my dad, who picked up the radio and told him to get a life (and a real job :-).

Christmas 1973 my dad got the "family" (meaning me, as I was chomping at the bit for one) a Midland 13-867 radio - non-PLL, "crystalplex" w/14(?) crystals, a basic good no-frills radio plus delta tune. Put a Hustler trunk mount on w/detachable antenna whip.

We paid our $20 to the FCC and got callsign KGN-6074. My dad made me read a bunch of Part 95 - and tested me on it! - before he'd let me use the rig.

We bought it from CB Center of America (Burlingame, CA branch), who was trying to become a national CB distributor, etc. - kinda a Ham Radio Outlet or AES of the time for CB. Thick catalog w/lotsa goodies. They lasted til Radio Shack got into it big time and when the auto parts stores & Sears & Wards carried CBs at low prices - they became essentially commodity items, nothing special. CB Center of America couldn't handle the boom, and certainly didn't handle the bust when people got bored with CBs and the market reduced back down to heavy travellers, truckers and the real core CB fanatics that had always been there.

I remember "S9" magazine in those years; when I'd do grocery runs for the folks as a kid, I'd get delayed coming home because I was reading "S9" and "CQ" mags - along with Popular Electronics and Radio-Electronics, back when those were "real" magazines - on the stand. Computer bu was already biting ;-) Ham rigs I remember seeing in ads in 73/74 were the Hallicrafters FPM300, the Galaxy (HyGain) rigs, Yaesu FTDX twins and transceiver, the big Swans, the Kenwood T599/R599 twins, and of course Heath. (Our Heathkit store in Redwood City, CA was jumping at the time.) Anyway, these rags were were fifty cents at the time. Saw quite a few "Kris" CBs in S9 ads but never in person. HyGain and Midland were big at the time - at least thru 76/77, lots of full-page color ads, etc. Motorola was trying to get in the CB market too in 76, and had some nice-looking - and probably quite good - radios. Some of the radios were starting to sport LED displays - somewhere around 76? 77? the 23ch to 40ch migration - mishandled by the FCC - began.

The 13-867 was great, we used it in our travels, helped us out since it was a good safety thing to have, etc. Another Oregon trip, I saw cousin Dan had borrowed a Siltronix base rig (while the Johnson was out for repairs) which was quite impressive. Several friends of the family had Midland or Lafayette base rigs.

The 13-867 was stolen out of our car and insurance replaced it with a 13-883 radio. This was Midland's top (or near top) of the line AM rig, with all the bells & whistles. Can't remember if it was a 13-883 A or B model but it was still a crystalplex radio; the later '883-C version apparently went over to the 3-crystal Cybernet PLL02A board shared with HyGain/Kraco/GE platforms. The 13-883 we had seemed to be nice & quiet but sensitive. Noise blanker worked pretty well. The "AWI" (antenna warning light) kept firing - we finally realized that the whip would loosen while driving and that it needed to be more than hand-tight so we always kept a cheapo crescent wrench around.

Anyway, fell out of the CB racket for no good reason, got into ham stuff (please, no flames ;-) as a teenager, schoolwork took over, got into computers, etc. etc....

But I'm getting a new vehicle this year (truck) and I'm going to put a nice Uniden Grant XL in it. What better way could I spend $130?

-Bill

Toll Free seems to have a big problem with Zener diodes.
If you have a 16 volt zener:
   What is the reverse breakover?  16 Volts
   What is the forward bias drop?  .7 volts
     What part of forward bias don't you undertsand?
You and )===={llllllllllllllll}>------ seem to have a real problem
 with simple electonics.
There are books that you both can read to understand how diodes work.

If you are going to quote the formulas for ohms law, use the proper
symbols, in ohms law formulas voltage is represented by the letter E
(electromotive force). E = I X R

Current flows in a circuit due to the force of voltage appled; however, the amount of current flow is limited by the amount of resistance in the circuit. In actual fact, the amount of current flow around a circuit is dependent on both voltage and resistance. This relationship between the three electrical properties of current, voltage, and resistance was discovered by George Sion Ohm, (Where you thinking toll free?) a German physicist, in 1872. Published originally in 1826, Ohm's Lax states that the current flow in a circuit is directly proportional to the source voltage applied and inversly proportional to the resistance of the circuit. Stated in mathmatical form, Ohm arrived at this formula: Current I = Voltage V / Resistance R.

Yes you are right E is often used in place of V but Oms law uses V.

But who cares what ohm says TOLL FREE PROVED HIM WRONGE

Hey
I run a Connex 3300 with a Wilson 500 magmount. I had heard that because of the length on the Wilson 500 whip my SWR's, that are matched perfect (1:1) on CB channels, will be shot to hell when I talk on SSB. I heard that it wouldn't be too bad 40 ch up or down from CB

but that the SWR's would hit the roof when I go 80 ch up or down form CB. Is there any truth in this? I haven't had the time to test it out with a meter yet, so I am just staying off SSB until I find out.

Well you are right these are good stories.

I got my first radio about 5 months ago. Yes I am a nebbie in the CB world so don't kill me. My first radio is a Connex 3300 and I love it to death. I have no complaints. I already have my eye on my next radio, a Majrage 88.

I was wondering if Palomar made the Python 225 amp? I like it because of its size. I've e-mailed Coax Kid about it 4 times but haven't gotten any type of response. Any help on these amps would be great. Thanks.

However CBers had absolutely no voice in the laws we are supposed to follow. The FCC does not answer in any way to the voters or Congress. The laws we're supposed to live by were imposed upon us by Hams and the ARRL (they're the ones who make many of the recommendations to the FCC for rules concerning the hobby bands). Hams that still to this day resent that 11 meters is no longer theirs exclusively but open to the general public. They placed those restrictions on us in an attempt to make the band unusable (4 watts is awfully weak on such a noisy band) or at least unpleasant. What they didn't expect (or perhaps they were counting on it?) was that the public demand for radio for the masses would be so great that most were perfectly willing to break those rules and make the band usable by running power, etc. Now, they're bitchin' about us breaking the rules. Some of the hams that opposed the allocation of 11 meters for CB are again rearing thier ugly heads shouting that CB has become a home for outlaws and rebels. (Who founded this country if not outlaws and rebels?) and should be de-allocated as a result of a lack of "self policing". I saw in another post were CBers were compared to those who don't vote but then complain about politicians. The problem is that until now we've never had a say in the rules we're supposed to follow. We weren't given the opportunity. Now, a group of Cbers get together and decide to start excercising the power of numbers in an

```
attempt to change things.  What do the hams do?  They bitch and whine
and accuse us of "trashing the house" and wanting to move next door to
get away from the trash.  I say the house was trashed before we ever
moved in.  Trashed by hams who deliberately used thier voice with the
FCC to ensure that if they couldn't have exclusive use of 11 meters
then no one would be able to use it.

I've forgotten the numbers, but right now there are a rather large number of people in Presidentially appointed jobs that were never agreed to by the Senate. I've written several letters to Senators asking why they haven't taken steps to correct that issue and have gotten no response. No one has the balls to stand up to slick willy.

As far as the FCC is concerned, legally, Congress is supposed to affirm any appointments made by the President. However, once that is done they no longer have any control or power over what those appointees do. In the case of the FCC, they are apparently free (in practice if not by law) to create any laws or rules they see fit without the consent of those who have to live by those rules. Vice Perpetrator Al Gore has even used the FCC to enact TAXES upon the people. A blatant violation of the Constitution.

I think I heard you the other morning on the bowl.  I was in my mobile
on the way to the salty mine and heard:
"ICE, ICE, AND MORE ICE MR. ICECOLD BIG APPLE TREES JUST GOT DOWN"
boomin in my receive.  I tried to get back at ya but conditions just
weren't there for my little ol' 2-pill mobile down here in Alabama.

A Radio Shack Walkie Talkie. Came with Ch 14 and two more empty slots. I
remember I could only talk to one person. I got a base that Christmas
(1977). A Montgomery Ward 702 and a PDL2.

Late 70's, 23 channel black faced Johnson mobile. Still have it altho
the hardwired mic has deceased. It was the best talkin radio I ever
owned. Up until I was old enough to drive it was used as a base
powered by a battery and charger for a power supply using a 102" steel
whip mounted on a roof tripod. Once I was driving it moved into my
first car and was used until the mic quit working in the late 80's
when I got a Cobra 25 ltd. Then I thought 40 channels was awesome. A

few months later I learned of the existance of sideband and got a Rat Shack sideband radio. I've since graduated to a RCI 2950 (the orriginal ones, not those watered down versions RCI is making now and not the Mirage) in the mobile and am using an Eagle Tomahawk base. My mobile antenna is a "Whiskey Still" big open air coil antenna. On the base I'm using a set of stacked threes on 70' tower.

No, your statements once again proved me right!

"current flow in a circuit is directly proportional to the source voltage
applied"

Meaning, if the source voltage goes up, the sunk current will, also.

"inversely proportional to the resistance of the circuit"

Meaning if the resistance goes up, the current goes down.

Toll Free

>> little over their rating?
>>
>
>
```

>Larger pulley's on the output shaft of the alternator, testing them when
>they are cold, not running them all the time.
On my next system, I was thinking of matching the torque peak rpm of my
diesel engine to match up with the peak current output on the
alternator, taking into consideration the manufacturers suggested pulley
ratio which I believe on diesel engines is 2:1. I could be wrong as I
don't have my references to hand.

I want this as my daily driver. No shoot outs in the UK.

Is this what you do to guarantee max torque from the engine to turn
those 8 alternators with minimum drag or do you match max alternator
output to max engine RPM? Am I missing something?
>
>
>> Spinning them faster 'should' only generate more heat, not amps:-)!
>
>Not necessarily true.
OK, I'll accept this, even though I don't fully understand how.
>People are running 3CX3K amps on a single alternator, using a 14 inch or
>bigger mainshaft pulley, and getting full power out of them because the
>alternator will push more current the faster the rotor is spinning in the
>stator.
God, a 14" pulley on the crank. That's a monster pulley!
>Law of physics their.
<snip>
>> I received the full catalogue from C.E. Niehoff Brushless Alternators.
>
>And what do you think?
These guys are not messing about. They seem to be looking after the
military vehicle department! Their 28V alternators are the true
monsters. 400A x 28V out of the box = nearly 12kw out of one alternator
= Class-C amp maybe 8-9KW of RF, yes/no? or maybe more using your
experience.

That'll do nicely, make that with heavy on the onions and fries.

<snip>

>What have you seen in the Neihoff catalog.
The same as you.

From their standard range the C712 is rated 12V @ 400A. The output curve
shows a peak of 425A at 8000 RPM but IMO is still rising. This is where
your theory comes in - what would it do if spinning at 9 or 10K!

This rating is with the temp at 72 deg F. It shows another graph with
the temp at 200 deg F where at 8000 RPM the output is down to
approximately 385A.

I'm sure most people know that alternators do not like excessive heat
but I think they do not realise just 'how' important it is to keep
things as cool as possible.

They mention that their alternator design is as much as 25% more
efficient than Lundel (claw-pole) rotor designs. I'm no alternator man.
Do Leece or Electrodyne use claw-pole rotors?

<snip>
>As well as the fact that for a switcher to stay together, it has to have
>nearly 20 percent load on the output at all times.
I thought that too, but there's far less than 20% drain on the Icom PSU
when the radio in on receive!
>Kinda takes away the efficiency unloaded.
>
>
>I would be interested in seeing the new ones, though. I hear they are
>clean.
I'll be back.

Hello Josuha: You left a lot of stuff out of you antenna installation here. What type antenna, matching system, how high, how close to other objects, what type coax, and how long. How is mounted or installed, on what type of mast? And what do what to do with the beam, get out better, reject others, ect.

Getting a antenna to work right can be a can of worms, a big can of worms. If its a store bought beam antenna, ya got to go buy the assembly instructions to a Tee.

Suggest you look over a ARRL Antenna Handbook, and look at the other beams at the MaCo web site at:
http://www.majestic-comm.com/maco/support/index.htm

See the M103C. These pictures and assembly instructions of the MaCo Beam Antennas requiers the Adoby software to view, but its free, and also listed at the noted site.

Let me know how ya make out.

Jay in the Mojave

I don't think anyone ever said it was only 23 channels in there... I
don't think they ever even said they wanted all of the channels
between there.  Just 23 of them.  Probably the ones on the lower end.

first of all the ssb'ers have no legal right to claim the upper channels for ssb only.... However there is a Gentlemans Agreement that these be used for ssb operation.......when I set up a new cb'er I always make sure that they are aware of this.....operating AM there s not illeagle....but it sure ain't no way (double negitive) to make friends...

This is rated @ 1KW , the party that has these left over , but are brand new Eagle 8 (515). The person is down south but has asked to not be identifed . The amp is cream face with black case , two original Eagle meters (plate and output) still uses the original chasis and cover . All the switches on the new ones have heavy stainless switches with no lamps , has a small red led lamp for power on like the old 515 . These amps sell for $500.00 retail , $40.00 shipping
....

Where did Toll ever mention that the diode was forward biased? I would think that you would assume that you put the diode in the reversed biased position (In order to use it as a zener). The idea is sound until you start to consider the effects of modulation. If your rig has 12V on the final collector, at a dead key of 4 watts, then (in a high level modulator) when you 100% modulate it (16 watts peak), the collector voltage will double to 24 volts during the modulation peaks. A 16 V zener would most likely clip those peaks, and square off your modulation at a much lower peak power level.

I found a schematic of a old Pace 23 channel radio that I used to own. In it they do have a zener from collector to ground. The value is 48V however........ I guess they didn't want to clip the modulation peaks, although I think they would have been safe at 30V.

This is all true, however you don't need to be so condescending about
it. I don't remember Toll ever stating that the diode was forward
biased. Anyone that understands diodes knows that zeners are used in the
reversed biased position.

Let's try to keep the theory discussions a little more civil please.
That way we may all learn something.....

The equation for Ohm's law can solve for any of the variable. E= I X R
is only one of them. I= E/R or R= E/I. They are all ohm's law.

If you know any two of the variables, you can solve for the 3rd. But if
you only know one, then the formula is useless.

And again, this assumes that each value for the variables remains
constant, which it rarely does in this example.

My first "real" radio (not counting the various walkie talkies) was a
Pace 223, that I got also at the tender young age of 14 on July 4th
1974. It cost me $100 back then for a radio that had nothing more than
volume, squelch and 23 channels.

My next radio came 3 month later (which seemed like a long time then),
when I sold the Pace, and got a used Lafayette Comstat 25 base. This was
a tube rig, and I had the most fun with this radio for the next 2 years.

Well, CBs are not the best tool for getting help anymore but depending on
what part of NC you are in there is/was one group that monitored channel 9
in Raleigh. Don't know if they are still around.

Still way off base. More and more power is lost in the transmission line as SWR goes up, but most of that 25% will be radiated in any normal station configuration (no long runs of rg58). It is not absorbed by the finals. If the SWR is infinite, then yes, the power will be lost as heat in the transmission line- not the radio. This well documented fact can be found in any of several antenna/ transmission line matching books. Walt Maxwell's newest edition of Reflections should be out soon, and will be worth it's weight in gold for all radio operators.

Hi Andy,

Let me ask you this, how do most SWR Meters measure SWR?

Bob.

Handy Andy wrote:

TOLL FREE LOOK @ #3: Proportional meanting if the current goes up the
voltage must go down. And if the voltage goes up the current must go down.
IN A CONTATANT RATIO! OR IN OTHER WORDS PROPORTIONAL

proportional (pre-p�r�she-nel, -por�-) adjective
Abbr. P.R.
1.Forming a relationship with other parts or quantities; being in proportion.
2.Properly related in size, degree, or other measurable characteristics; corresponding: Punishment ought to be proportional to the crime.
3.Mathematics. Having the same or a constant ratio.

noun
One of the quantities in a mathematical proportion.
- propor�tional�ity (-she-n�l��-t�) noun
- propor�tionally adverb

WHY would you take a GOOD CB radio & convert it to Rambobo Hambobo bands ?
The trend these days is to convert Hambo to CB !  CB is Superior !
Dave !!!

Well, these are some great stories. I think I'll continue with some good stuff. After the TRC 449, I was not finished. i never gave up that radio, but I did have some cool stuff though the years, so I'll share. I had a Johnson 23 channel ssb mobile, but this is the only mobile I ever saw with a power supply in the bottom. Yup this mobile had a lump underneath that was a power supply to plug it in. Worked great. I also had I think the best radio I ever owned, a Lafyette Constat 23. Not Comstat... This was a 23 channel base with wook grain, and it came witht eh sweetest souning Turner plus 2 mike I ever heard. Well, because 23 challens was out, I got rid of these 2 radios, but they gave me a lot of fun.

Many hams don't think much of the ARRL,even members,we just like the bennies.I don't think hams or the ARRL have much pull with the FCC.

> They placed those restrictions on us in an
> attempt to make the band unusable (4 watts is awfully weak on such a
> noisy band) or at least unpleasant.
> Green Dragon

What makes the band unusable IS THE CBers running more than 4 watts.4 watts is not only enough for what the band was intended for but also enough for the ilegal worldwide DXing.Besides the limit is 12 watts on SSB and an SSB signal is more efficient anyway.

I remember back in the day, the truckers were on channel 10 and somehow a agreement was made that truckers would move to 19 so as not to cause so much bleedover on channel 9, which was considered to be the emergency channel. These agreement are only among those who agree. Sideband makes it hard for a AMer to talk and AM makes it hard for a sidebander to. But to say that someone should'nt talk because a channel is reserved for Sideband is crazy. Just click to Am and tell the AMer you are talking on sideband and hopefully he will move on, if not maybe you have to move to another one of your so called sideband channel. I love sidebanding but I'm not about to add to the cb confusion by trying to police seldom used channel or call them sideband only channel...........

I admitted to being wrong about the voltage. I normally use 36 (or thereabout) devices.

Sorry for the confusion.

The moron that keeps telling everyone different just doesn't understand. He sees diode, and automatically assumes that he (we) must be using it as a rectifier.
